COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 2½ crores of three months Treasury Bills were opened on Tuesday, December 5. The total amount offered was Rs. 4,72,25,000. Tenders at Rs. 99-6-3 were accepted in full and those at Rs. 99-6-0 were allotted approximately 89 per cent. Lower tenders were rejected. The total amount accepted was Rs. 2½ crores, the average rate of accepted tenders being Rs. 2-8-0 per annum.

Tenders for Rs. 2½ crores of three months Treasury Bills will be received on Tuesday, December 12. Successful tenderers should make payment on Friday, December 15. Other conditions are as usual.

Three months intermediates will be sold from December 6 to 11 at Rs. 99-6-3 per cent. subject to the conditions previously announced.

Three months intermediates sold from November 29 to December 4, amounted to Rs. 1,98,25,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, December 6 tenders to the amount of £50,000 at 1s. 6 1/16d. were received and allotted in full.

On Wednesday, December 13, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 31st October, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	2,036
British Treasury Bills	14,696,626
Other British and Dominion Government Securities	14,278,004
Gold.—In England	2,152,334
In India	8,871,000
Total ...	40,000,000

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, December 7, 1933.

Comparatively easier conditions have prevailed on the Calcutta Stock Exchange and values in almost all the sections have shown a falling off. New demand has been practically nil. There are more sellers in evidence, due either to profit taking, or to the absence of fresh support or stop—loss sales.

3½% paper has shown a fall of a rupee, changing hands at Rs. 80-10 against Rs. 81-12 last week. A corresponding decline has taken place in other Government securities.

Jutes similarly were less interesting, and the turnover was poor. Howrahs once tumbled down to Rs. 46-6 later on showing a small rise on purchases by option dealers and averagers. Kamarhatty by the same token dropped down to Rs. 472, later closing at Rs. 479.

No fresh news being received regarding the negotiations for restriction which are still proceeding, there was fair selling by profit takers and values in almost all cases have shown a decline, though there was a small enquiry for some scrips at declines, the undertone of this section, however, remaining healthy.

Ruling easier during the early part of the week, the section showed an improved tone towards the close of the week. The better feeling was partly due to the announcement that next season's export quota bill be increased to 87½% or say 2½% only over the previous week. There was a good rise in tea shares in the London market and this had naturally a sympathetic healthy effect on the market. There was slightly mere enquiry but, on the whole, the volume of actual business passing was rather small. Considering the realisations at tea sales and the general improvement in tea, the shares should have shown a better tone. But at the moment investors and speculators have their attention switched off to other sections and this has been responsible for lethargic conditions in tea shares.

Miscellaneous section was equally dull. Cottons had nothing to report. Sugars, though steady after the decline, had not much to report. Ivan Jones were here and there asked for at rates unchanged. Banks, Electricals, and Railways has only but isolated deals.

BOMBAY STOCK EXCHANGE

(By Wire)

(From our Correspondent.)

Bombay, December 7.

Securities:

Giltedged securites ruled a bit easier. Government Papers 3½ per cent. which closed last Thursday at Rs. 81-7 after just touching 81-8-6 declined in sympathy with the share bazar to Rs. 80-6-0 but later steadied to Rs. 80-15.

Shares:

Declining trend in cotton, hopeless state of Indian textile industry and closure of many mills worried mill shareholders. Big electric power companies would suffer through decreased consumption of energy. Big operation started to liquidate his hodings and the ball was set rolling. Heavy decline continued till Tuesday in these shares and other sections more or less were affected. Later, however, profittaking by bears steadied the market. On balance only Bombay Burma Dyeing have not suffered. Fluctuations in important scrips are given below:

	Last Close 30-11-33	Highest	Lowest	Close today
India Cement ...	253 2	252 8	237 8	247 8
Andhra Valley (Ord.)	1,321 4	1,323 12	1,277 8	1,295 0
Tata Power (Ord.)	903 12	905 0	835 0	850 0
Bombay Dyeing	753 12	752 8	732 8	751 4
Century ...	192 8	193 12	181 4	187 8
Nagpur	223 12	229 6	218 12	226 14
Tata Steel (Ord.) ...	45 12	45 14	41 12	44 0
Tata Steel Defd.	177 8	178 2	166 4	174 6
Tata 2nd Preference	100 12	101 4	99 12	101 0
Bombay Burma Oil	347 8	352 8	336 4	351 14
Indian Bleaching ...	132 8	145 0	128 12	145 0
Indore Malwa ...	85 0	90 0	77 8	77 8

Most of other shares of Currimbhoy group have been sagging further, some being nominally quoted. In cash scrips, Luxmi came down from 745 to 710 and Western from Rs. 1442-8-0 to Rs. 1410. Sholapur Sugar declined from Rs. 175-10 to Rs. 160 and later improved to Rs. 170. Telephone similarly came down from Rs. 76-4-0 to Rs. 75-0-0 to rise to Rs. 78.

MADRAS STOCK EXCHANGE

(By Wire.)

(From Our Correspondent)

Madras, December 7.

In Government securities the market weakened 3½ per cent. paper quoting Rs. 81-6 but towards the close it rallied to Rs. 81-15. The lack of investment demand and higher Treasury rates helped the liquidation in paper, short and medium dated securities, 1947-50 loan was propped up by some investment enquiry and scarcity of scrip; 1960-70 loan after touching low levels improved to Rs. 97-15. At the time of closing much business passed in paper owing to short covering. The market closed quiet Mysore and Cochin Loans were firm at old levels. A good business was put through in Mysore Loans Corporation, short and medium dated debentures were available on a 4 per cent. basis while the long dated loans have declined to prices yielding 5 per cent. Business was hamoered by shortage of scrip, fixed securities, United Nilgiri 1936 debentures changed hands in big lots at Rs. 101 with buyers offering at par. At the close electric supply debentures closed with sellers scarce. Bank shares were neglected except for a good block of Indian Banks which changed hands at Rs. 93-8 with more sellers at this prices. Mysore Banks changed hands at Rs. 219. In Mill shares, Buckinghams were absorbed at Rs. 186, Maduras continued in request at Rs. 31½, Vellore electrics were wanted at Rs. 23 and Rs. 9-12 respectively without any available. Trichy Srirangams changed hands at Rs. 142. In Cement shares, Shahabads were done at Rs. 250 and Indian Cement at par. Sugar shares lacked life and closed weak. In Planting a big block of United Nilgiri Teas changed hands at Rs. 88 with buyers over. In the Miscellaneous section United Breweries were enquired for at Rs. 101 whilst Murree Breweries were done at Rs. 176 cum. dividend. The markets closed with an uncertain tone.

JUTE AND JUTE GOODS

JUTE

Calcutta Dec. 7, 1933.

As anticipated last week the jute market has ruled very quiet in spite of steadier goods market. The highest and lowest prices for December futures were Rs. 25 and Rs. 24-4.

Small business was done for December shipment at Rs. 24 otherwise the market has ruled quiet. There are more sellers in evidence for loose jute and business is reported done at slightly lower rates than the previous week. Arrivals in Calcutta as well as in the moffussil have shown a falling off but so far had no appreciable effect on the market. Due to the approach of December delivery and the holidays long liquidation is going on and the values are consequently downwards.

JUTE MANUFACTURES

Since reporting last there was a sharp decline in the price of hessians. On Saturday the lowest was Rs. 8-9 per hundred yards. The decline was brought about by the announcement made by the Farm Administration in U.S.A. to levy a process tax on jute cloth to compensate the process tax on cotton.

Early in the year to compensate the cotton grower the Government of U.S.A. had to levy a tax on Cotton products at 4.2 cents a lb., the sum thus raised was to be paid to the cotton growers in return for the curtailment of sowings of cotton. This tax placed the manufacturers of burlaf and paper bags in an advantageous position and consequently the manufactures of cotton bags approached the Government of U.S.A. requesting them to place a compensatory tax on jute and paper bags. The matter was under consideration for a very long time. According to Reuters News Agency on December 1, the Farm Administration announced to place a compensatory tax of 2.9 cents a lb., on jute fabrics and jute yarn. The tax is to come into effect immediately.

In the absence of definite information on Saturday morning the market became rather nervous confusing the process as an import duty on the entire jute fabrics imported into the U. S. A. Later on when the position became clear the market began to regain the last ground. The quantity of hessians affected by this tax is not the whole of 30 to 40 million yards but about 8 or 9 million yards of hessians exported each month for the manufacture of burluf bags, even then a major portion of the burden will be borne by the consumer in the form of increased price of bags.

On Tuesday, the market showed further strength on the report that the committee of the Indian Jute Mills Association have, for the time being, ruled out of question the opening of 5 per cent. sealed hessian looms proposed by some members and that they do not mean to take any steps in the matter at this moment. This report made the shorts cover and market ruled fully steady on Wednesday the closing was rather easy due to profit taking.

Another encouraging feature was the decrease in the stocks of hessians by 8 million yards and that of heavy goods by 12 million yards on December 1, 1933, as compared with November 1, 1933. The statistical position being very sound a couple of long holders were found interesting themselves in hessians and are reported to have actually made some purchases for near positions.

Taking all these factors into consideration the market in the long run is likely to rule fully steady except as periodical drops on profit taking.

COTTON AND COTTON GOODS

COTTON

By Wire

(From Our Correspondent)

Bombay, December 7.

American rates moved within narrow range being mostly due to gyration of dollar. Operators have been apathetic—waiting for clarification of government's monetary policy. Locally Broach rate touched the lowest at 175-4 and highest at 179-8, fluctuations being mainly caused by changing phases in protracted Indo-Japanese trade talks.

Steady but quiet conditions prevailed in the cotton market during the week. Broach April-May after touching Rs. 174 has shown a small improvement at Rs. 178 per Candy. This has been due to bear covering and a better interest shown by commission houses at decline. The Indo-Japanese negotiations are still proceeding and their protracted nature is having a very unsatisfactory effect on the market. Technically the condition of the Indian Cotton is far from satisfactory at the moment bear account has been fairly well covered. The tenders for December-January Oomras delivery are being offered and long liquidation has therefore set in. The crop this season has been rather late and the full pressure of the hedge sales is still to be felt. The only factor for a helpful bull is the low level of price but it is only a weak factor. It may resist fall or allow it by slow degrees, but cannot help the bull a long way.

Conditions in U. S. A. though very undecided have shown some improvement and but for currency troubles the trade has been a little more satisfactory.

The feeling is slowly showing more confidence and unless the dollar again upsets it the market has fully settled down to the state of affairs so far reached. But it is very much doubtful how far the American confidence will inspire the Indian Cotton market unless a satisfactory settlement with Japan is reached and India's cotton purchases by the latter, are assured. At the moment the tendency of the market is very uncertain.

The final American Cotton Bureau report is expected to-morrow. But there is not much enthusiasm about it in the market. The American crop picking season is mostly over and therefore no surprise is expected in the crop estimate as compared with the one reported on Nov. 8.

PIECEGOODS

Calcutta Dec. 7, 1933.

Dull conditions have prevailed in the piecegoods market in Calcutta during the current week, pending the final settlement of Indo-Japanese trade agreement in Delhi. However one thing is noticeable for the past few weeks that there has been no further price cutting by the dealers. Although the nature of enquiry has not been very large, the prices however are well maintained. This has been due to the smallness of stocks and no heavy anticipated arrivals in the near future. Spot clearances are small but if normal enquiry for hot weather requirements sets in, the same will shew better results from next month.

In forward business the volume has been extremely small being confined to some standard Deshi lines and Dhoties, fancies and special lines from Lancashire. As from Japan there is no fresh forward business nor any spot sales.

YARN

Steady conditions as reported during the previous weeks have been well maintained though the falling off in demand noticeable during the current week did not justify them. It has been partly due to the fact that the major portion of bazaar stocks has been in few strong hands only, second hand dealers having nothing to offer; and partly because of the fact that Japan being out of the market Lancashire and Indian spinners are not in a mood to offer at lower prices, and new business therefore has been not possible. Until and unless the question of tariff on Japanese yarns is finally settled similar conditions in the market will continue to prevail.

BULLION

GOLD

(*By Wire*)

(From our correspondent)

Bombay, December 7.

Gold: During the period under review, franc continued to depreciate touching 84-50 when local rate touched Rs. 31-11 yesterday. The rate for January settlement quoted at 5.30 p.m. today at 31-6-3- with franc standing at 83-50.

Calcutta Dec. 7, 1933.

Gold.—After ruling easier during the earlier part of the week the market has ruled steadier towards the close. The fall in price of gold was caused by the fall in franc but the same having improved towards the close the market here has ruled steadier. The highest and lowest in the Calcutta market were Rs. 31-8 and Rs. 31 per tola respectively. The Indian prices being above the London parity during the earlier part of the week business for export was not possible. But later on the same returning to parity new business for export was negotiated. Stocks in Bombay are still very high being estimated at about 12 lakhs tolas. Sovereigns are quoted at Rs. 20-2.

SILVER

(By Wire)

(From Our Correspondent)

Bombay, Dec. 7.

Silver: Local operators have apparently lost all faith in America trying to lift up rates of white metal. After a quiet period, rates have eased further. Rate for ready touched yesterday Rs. 55-15-0. Today also it stands at same level in the evening.

Calcutta, 7th December.

Silver.—A quiet market has prevailed throughout the week without any business of importance passing. Stocks are heavy at 9,000 bars in Bombay and 1,000 bars in Calcutta the daily average offtake coming to about 25 bars. The highest and lowest price of the week were Rs. 56-12 and Rs. 56-8 respectively. London quotations have ruled in the vicinity of 18⅛d. Shanghai dollar rulling at 1s. 3⅜d.

LONDON (Air Mail Week)

During the week under review market conditions may be described as rather quiet. Though the tendency was slightly easier price fluctuations have been small. The enquiry from America eased and in the latter part of the week, the inclination of America was rather for selling without, however, exerting pressure. There were moderate sales from the Continent. Support was forthcoming from the Indian bazaars and there was some demand from China. Hence a fairly steady tone was maintained.

The following were the United Kingdom imports and exports of silver registered from midday on the 13th Nov. to midday on the 20th November:—

TEA

Sale No. 25 was held on 4th and 5th December, when 19,000 packages of tea leaf with export rights, 8,200 packages of leaf and 6,000 packages of dust for internal consumption were sold at annas 0-9-7, 0-4-5 and 0-5-2 per lb. respectively.

It has been notified that the export quota for 1934 season will be 87½ per cent. of the standard export year or 2½ per cent. more than the season 1933. As a result whereof the market was fully steady business being done upto As. 10. There was a better demand for all grades, prices showing a small increase in all cases.

The market for internal consumption tea was not so brisk but dusts were however in good demand.

The outturn during November declined about 11 million lbs. making the total decrease to approximately 44 million lbs.

The following are the full particulars of Sale No. 25:—

Teas with Export Rights

		1933.	1932.	1931.

Clean C. B. Pekoe	12d.	12¾d.
Clean C. O. Pekoe	12¼d.	13¼d.
Clean C. B. O. Pekoe ...	12¼d.	13d.

TEA EXPORTS

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association.

Quantity of tea entered for export to United Kingdom for the second half of November 1933.

Calcutta—Black 13,837,519 lbs.; Green nil.

Chittagong—Black 3,786,795 lbs.; Green nil.

Quantity entered during the corresponding period last year:—

Calcutta—Black 14,656,090 lb.; Green nil.

Chittagong—Black 4,979,462 lbs.; Green nil.

Total from April 1, 1933 to November 30 1933:—

Calcutta—Black 123,337,489 lbs.; Green nil.

Chittagong—Black 60,393,767 lbs.; Green nil.

Total 183,731,256 lbs.

Total from April 1, 1932 to November 30, 1932.—224,936,930 lbs.

Exports from Northern India from 1st April 1933 to 5th December, 1933.

	Season 1933-34	Season 1932-33	Season 1931-32

GRAINS AND SEEDS

WHEAT

Quiet but steady has ruled the wheat market in Calcutta, without any change in rates. Ready quotations are on the whole easier while May Beta is steadier. The off-take has shown some improvement and a fair general buying is noticeable. But at the same time increase in despatches from the interior to bigger and port towns is visible and the paucity of stocks that was the main steadying factor in the port towns is gradually decreasing.

Considering the new crop wheat sowings in Northern India, where it has been completed and also the statistical position of wheat, the tendency should by all tokens be bearish. But after all the values are very low and in spite of strong bear factors there is little room for decline. On the contrary the offtake is better than few months ago and the expectations are that it may show further improvement in future. The position therefore seems to be in favour of a narrow market. Larger arrivals and selling pressure will not let the prices rule high enough for a long time, but the buoyancy of the market will not be wanting at declines. At the moment operations both ways, after a movement of couple of annas will prove good for small profits.

The foreign wheat markets have ruled very irregular. The announcement by the argentine Government to establish a Grain Controlling Board and fixing a basic price for the purchase of wheat, maize and linseed, together with the depreciation of argentine currency had a very disturbing effect, though for all practical purposes there was little effect thereof visible in the Indian market.

The statistical position in Europe and Canada as stated in one of the previous issues remains unchanged and becoming more satisfactory and in no way a bear factor at the moment. The reports received by the air mail go to show that a considerable damage has been caused to grain corps in Russia including great quantities of unstocked wheat by the recent fall of heavy snow. The loss reported is said to be irretrievable and complete.

WHEAT COMMITTEE

The Wheat Advisory Committee at a meeting recently held in London under the presidency of the American Ambassador reviewed the world wheat situation and appointed two sub-committees to consider the proposals of importing and exporting countries and report to the next meeting on January 22, 1934, of the main committee which will report to the Governments concerned.

The sub-committee on market conditions, the U. S. representative presiding and including the representives of England, France, Germany, Canada, Australia and Hungary, has been instructed to report before Christmas.

The sub-committee on measures to increase the consumption of wheat will meet in Paris in January and will be presided over by the French representative and will include the representatives of England, Italy, Germany, Argentine, Australia, Rumania and Yugoslavia.

LINSEED

Easier conditions have prevailed in the market and values have declined from Rs. 4-7 per maund the highest of the previous week to Rs. 4-4 the lowest of the current week. There has been a scarcity of ready stocks of linseed and this has been the only steadying factor, and has from time to time been responsible for spasmodic, though short-lived, rise in the market.

The recent announcement by the Government of Argentina regarding the drastic regulations, in the exchange and the intention of establishing a Grain Control Board which will buy from the producers wheat at 5.75, maize at 4.40 and linseed at 11.50 pesos respectively, had a steadying influence on the market. The first inference made by the announcement was that the Government will buy

linseed at 11.50 pesos. But on scrutiny it transpired that along with the fixing of price is the factor of controlling and depreciating currency, which was a bear factor for Indian seed. Consequently the rise which took place on the former assumption did not last for more than a day and values receded almost to the pre-news levels. At the moment of writing the tendency is weak with a narrow market.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

THE RATIO & THE RESERVE BANK BILL

Our special representative wires from Delhi that the position as regards the ratio has not been clarified at that end and suggests that this is due to lack of correct appreciation of relevant factors both by the Government and the Opposition. There are in all five schools of thought (if we can so describe groups of persons who seem to suffer from want of precise and clear understanding on this question). Firstly, there are those who like Sir George Schuster think that eighteenpence ratio should not be disturbed. Secondly, there are members like Sir Cowasji Jehangir and Mr. H. P. Mody who want a change in the ratio, but agree with the Government's plea that this issue is irrelevant in the discussions on the Reserve Bank Bill. Thirdly, those like Mr. Ramsay Scott who advocate a sixteen pence rupee, now and here. Fourthly, we should refer to members who want a ratio lower than sixteen pence, now and here, but would keep the link with sterling. Fifthly, we have those who want to abandon both eighteen pence and the link with sterling, and who insist, so to say, on a floating rupee in the hope that it should be able to find its level.

* * *

That depreciation of currency is essential and should not be delayed is a matter on which there is a preponderatingly large opinion in the House. But as there are five differing view points as to the nature and method and time of devaluation, the evolution of a common formula is urgent and imperative. If no such formula is arrived at, the utmost chaos will prevail at the time of voting and the Opposition, despite a majority of adherents to the idea of urgent devaluation, will fail to win when division is called. The standpoint of *Indian Finance* has been, and continues to be, that the ratio is part and parcel of the Reserve Bank scheme and that, unless a suitable ratio were decided on now and incorporated in the Bill, the Reserve Bank will find itself in a position in which it would be called on to discharge heavy remittance obligations and thus cause serious maladjustments in our economic and financial life. We have again and again urged that the ratio question was deemed to be so integral a part of the Reserve Bank scheme in New Zealand, that the authorities there in consultation with those of the Bank of England decided on lowering the ratio by a further ten percent in the Reserve Bank Bill now being discussed by the New Zealand legislature. If the ratio is not an irrelevant issue in New Zealand, Sir George must explain to us how it becomes irrelevant in India. In sanctimonious defence, of his plea that the present proposal pertains only to the Reserve Bank, the Finance Member claims that he is doing nothing with the ratio and that he is just maintainig the *status quo*. These are his very words as regards the ratio : "This Bill picks up the provisions of the existing law. It has to do so. It must make it clear that the provisions of the existing law have to continue and if we adopted any other course we should grossly deceive the public because at present we have not the least intention to alter the existing law". Mark the stress which he lays on the need to continue provisions of the existing law and on his honest intention to refrain from altering the existing law.

Mark this emphasis and then study the provisions of currency Act of 1927 and clauses 40 and 41 of the Reserve Bank Bill. And it will be at once realised that, as "Eavesdropper" remarks in this week's Gossip Schuster has not either read the Currency Act of 1927 carefully or understood the relevant sections correctly. Parenthetically, we have to state that the law governing ratio is the Currency Act of 1927 as the ordinance issued on September 21, 1931, and suspending Currency Act of 1927, was itself revoked by the second ordinance issued later in the same week. Section 4 of Act IV of 1927 deals with "obligation upon Government to purphase gold bullion tendered for sale" and runs as follows : "Any person who offers for sale to the Governor-General-in-Council at the office of the Master of the Mint of Bombay or at any other place notified in this behalf by the Governor-General-in-Council in the Gazette of India, gold in the form of bars containing not less than 40 tolas of fine gold shall, subject to such conditions as the Governor-General-in Council may by notification in the Gazettee of India prescribe, be entitled to receive payment for the same at the rate of Rs. 21-3-10 per tola of fine gold". Thus so far as buying obligation is concerned the rate is fixed in terms of the price of gold. There is no rate in terms of rupee-sterling parity.

* * *

It was never the intention, and it is not the legal position, that the Government should maintain the upper point by purchase of sterling. Purchase of gold was to govern the upper point. On the other hand, section 41 of the present Reserve Bank Bill imposes the obligation to buy "sterling for immediate delivery in London at a rate not higher than 1s. 6 3/16d. for a rupee". In other words, Sir George's claim that all that he does is to "pick up the provisions of the existing law" is misleading untenable and materially incorrect. Despite his profession that he has not "the least intention to alter the existing law" we have to tell him that he does seek to do more than what obtains under the existing law. He won over men like Sir Cowasji Jehangir and Mr. H. P. Mody by a plea which, on analysis, is proved to be wholly untenable.

* * *

It is pathetic to see Sir Cowasji making attempts to modify the ratio clauses in a way that will enable him to avoid the Scylla of official displeasure and the Charybdies of public unpopularity. The following are the amendments of which he has given notice : (1) that in clause 40 of the Bill for the words "at a rate not below 1s. 5 49/64d. for a rupee" the words "at the rates at which the Governor-General-Council is bound to sell sterling by the law in force in British India on the day before this section comes into force" be constituted. (2) that in clause 41 of the Bill for the words "at a rate not higher than 1s. 6 3/16d. for a rupee" the words "at a rate not higher than 27/64d. for a rupee above the rate at which the Governor-General-in-Council is bound to sell sterling by the law in force in British India on the day before this section comes into force" be substituted. In the present statutory position an upper point for sterling standard is lacking and Sir Cowasji obligingly furnishes an amendment which by the addition of the margin of 27/64 makes up the existing legal defect. And the margin of 27/64 he suggests is exactly the difference

between the upper point and the lower point in respect of 1s. 6d. par of exchange. He thus confirms the fact of 1s. 6d. ratio. It is difficult to understand what exactly Sir Cowasji could have in mind in proposing amendments which secure nothing in the interest of the lower ratio and which, on the other hand, mean actually playing into the hands of Finance Member.

* * *

From this point of view, the amendment proposed by Mr. H. P. Mody and Mr. K. P. Thampan are technically correct and carry out Sir George's claim in letter and spirit. They propose that the buying and selling rates should not be specified but must be stated to be the rates "at which on the day prior to the coming into force of this section the Governor-General-in-Council is by law under obligation to buy sterling" or sell sterling, as the case may be, thus maintaining the *status quo*. At the same time it makes it necessary for Government to come to the Assembly for change in Currency Act so as to embrace obligation to buy sterling at unpper point. This will furnish early opportunity for the Legislature to discuss the ratio question on its merits. While we still adhere to our view that the ratio is certainly an issue relevant to the Reserve Bank Bill, we believe that the formula of Mr. Mody and Mr. Thampan may be the rallying point for the different schools of thought on the ratio. It does not solve the ratio question now but necessitates a very early solution.

UNADULTERATED BUREAUCRACY

A short time back, South Africa assumed a menacing attitude against the British Empire, in the direction of secession over the flag question. To-day the Irish Free State is within an inch of actually performing the feat. But, Newfoundland has lost its Dominion Status and sovereign rights. The theory of Seeley, on the question of the British colonial expansion, that the ripe fruit would fall down from the parent tree, has, for once, been falsified by the fruit rotting, instead of ripening, and sticking to the stem of the tree itself.

* * *

In pursuance of the Royal Commission's Report, signed by Lord Amulree, the President, and two other members, the British Government has chosen to adopt its recommendations *in toto*. The report was damaging to the past Administrations of Newfoundland. Since the War, there has not been a single year, in which the budget was balanced. Loans were contracted without any thought of the Island's ability to repay. A century's public debt was more than doubled, within the short span of 12 years. The improvident Administration dissipated its assets ; the people accepted false standards ; and the country sank in waste and extravagance. In the words of the report, "there has been a continuing process of greed, graft, and corruption, which has left few classes of the community untouched by its insidious influences." The Royal Commission, after eliminating the possible solutions of default, inflation, the sale of Labrador and political union with Canada as unsuitable, recommended assistance from the United Kingdom. It was, therefore, suggested that the existing form of Government, should be temporarily suppressed, including the existing legislature and executive council, and a Special Commission of six, with the Governor at its head, should be appointed by the King, to substitute the existing Government and exercise full legislative and executive power. The financial proposals of the United Kingdom are to guarantee a new 3 per ctnt. sterling Newfoundland stock, with a life of ten to thirty years, in exchange for the outstanding stock of bonds of the Newfoundland Government, with certain important exceptions. The island gets a relief of about £350,000 on the present £1,000,000 of annual debt interest charge. In this connection, it is significant that Mr. F. C. Alderdice, the Prime Minister of Newfoundland, endorsed the British scheme in these words: "The terms offered by the Imperial Government are particularly generous." Commercial and political circles have also received the Report most favourably.

* * *

But, the surrender of Dominion Status by a member of the British Empire was undreamt of by the Statesman or the constitutional lawyer. The possibility of secession engaged the thoughts of active minds. This precedent will arouse suspicion in the hearts of many another Dominion. Though, in the case of Australia, Canada, South Africa, or any other White Dominion, the surrender of Dominion Status may be temporary, the application of the principle to India, for instance, will be extremely hazardous. To lose even representative institutions, which she now has, will be sad, indeed. Normally, such a fear might be treated as unworthy of India as well as of Britain. But, in the hands of an autocratic Pro-Consul and Secretary of State, this precedent would bear, within itself, the seeds of potential mischief. In any case, an alarm of this character can only do good, in imparting edge to the vigilance of Indians in protecting their political interests.

* * *

Mr. Neville Chamberlain has moved the financial Resolution in the House of Commons on Thursday, giving effect to the proposals made in the Royal Commission's Report. In doing so, he announced that the present Newfoundland Government had entirely endorsed the Commission's proposals, and has addressed His Majesty praying for the issue of a New Letters Patent, authorising the British Government to assume responsibilities for the island. The astonishing event of a Dominion surrendering its sovereign status is proof positive of the depths of demoralisation, to which financial muddle can drag a people. Statute of Westminster was wasted on Newfoundland. But, the autocracy, however benevolent, of the King under the same Statute was also demonstrated.

REVIVAL—& PROSPECTS

The enlargement of our Monthly Trade Review so as to include with in its Scope the principal countries of the world provides an apt occasion for examining the validity in objective fact of the general feeling that trade is on the mend. So far as India is concerned, we pointed out a few weeks ago, with greater emphasis in the Monthly Trade Supplement published along with this issue, that the exports of India have definitely been on the increase during the last few months and that the pace and steadiness of such increase suggest their continuance in the future. As for the rest of the world, a careful scrutiny of the production and trade statistics supplied in the Supplement will show that the world need no more be oppressed by the feeling that the international exchange of commodities is being subjected to continued downward pressure. In Great Britian, the revival, which till very recently was confined to internal trade, has now extended to exports as well. The steady, if somewhat unappreciable, decrease in unemployment in that country is a fact, which has been well advertised all over the world. The revival of British exports is particularly important in as much as Britain is most dependent for the revival of her exports on a definite improvement in economic conditions in practically all parts of the world. As for Germany, France and the United States, the other three big industrial countries of the world. it is well kown that the U. S. A. is now engaged in a recovery experiments of admittedly far-reaching significance. Whether one takes the view that such improvement,

as has taken place already, is the result of the recovery programme or of the forces that are found to work over various parts of the globe, there is no gainsaying the fact that conditions in the United States will no longer be a bar to the revival of world economy.

* * *

While we may be certain that the last few months have witnessed a considerable improvement in the internal trade of each country and in the international exchange of commodities, it remains to enquire into the reasons for expecting a steady progress in the future. May it not be, it may be asked, that the present revival is due to forces that may spend themselves out in a short time leaving the world again, helpless before the depression? In other words, may not this revival be, so to say, the last flicker of the dying flame of world trade? What reasons have we to think that the cyclical impulses to recovery have at last gained the upper hand and that the time is come when the depression will resolve itself in the manner which we are familiar with in past experience. These questions cannot be dismissed as the promptings of an irrepressible pessimism. For all the more important diagnoses of the ills of world trade during the last three years suggested clearly that we might rule out the chances of a merely automatic recovery. Whether we view the depression as having been brought about by the inflated value of gold, or the maladjustment between production and consumption, or the catching up of world trade in a tangled net work of tariffs, and barriers, we are not yet in a position to claim that the cause of dislocation has ceased to operate. Of the blighting effect of tariffs, little need be said. The failure of the World Economic Conference, though apparently it was over the question of exchange stabilisation, was only the result of an attempt to jump before coming to the style and the consequent mishap. As regards maladjustment between production and consumption, we are yet to hear outside America of any organised attempt to increase the purchasing power and consumptive capacity of the masses. The fall in unemployment, welcome as it is, can hardly suffice to bring about that increase in consumptive demand which can be relied upon to develop the present incipient revival into a growing prosperity.

* * *

Only in the monetary sphere can one record any considerable improvement. Though the world has

done little towards the revaluation of gold, much has happened during the last two years to lighten the volume and weight of international indebtedness. After all, it is more than two years since the vast payments on account of war debts and reparations have ceased. Whatever might happen to these vexed questions in the future, the advantage of not being obliged to make these large scale transferences of value has definitely accrued to the economy of the nations concerned and to world trade as a whole. Besides, the depreciation of the majority of the world's currencies and the smooth repudiation of the utterly indefensible gold clause have lightened the load of the debts owed between one country and another. Germany has succeeded in securing for herself the relief which, on principles of equity, an insolvent debtor is unquestionably entitled to. And of late, she has turned the former disadvantage into a definite vantage. The system of accepting German bonds in payment of exports from Germany has enabled her, not only to liquidate a large part of her indebtedness, but also to carry out a veiled form of currency depreciation, which has stood her export trade in good stead.

* * *

Without going further into details, we might urge here that the depreciation of the dollar and sterling, the currencies of the two foremost creditor nations of the world, is a bull point of incalculable significance in the prospects of world trade in the future. It will be seen, therefore, that the failure of the World Economic Conference to come to an agreement on exchange stabilisation is not an altogether unmixed evil. It is true that gold continues to retain its inflated value in terms of currencies and commodities. But Mr. Roosevelt is credited with the intention of pursuing a monetary policy such as would drive even the financially strongest nations from the gold standard and to force the world at large to take up the task of revaluing gold. We are of opinion, and we have expressed it on former occasions in these columns, that even if the nation's pool of wisdom should not be equal to the task of revaluing gold, it would be sufficient for the purposes of recovery if there is a general depreciation of currency all over the world with a repudiation of the gold clause, so that nations would be enabled to discharge their debts on more reasonable terms than would be possible otherwise. When such events take place, there is hardly any incentive for any one country or group of countries to prevent the co-ordination of monetary policy throughout the world.

* * *

It is necessary to emphasise this point, as there is every reason to believe that the recovery so far witnessed is due almost solely to the changes in the monetary factor. We need hardly point out that to say this is not to admit in entirety the monetary view of the depression. In Britain, it is generally acknowledged on all hands that the improvement is due, to use the words of the Economist, to "the gentle rain of cheap money, the classical solvent of depression, which has once again unobtrusively, but effectively, watered the barren earth." If the place of monetary changes in the recovery and their role in the future improvement were realised, then attention could be concentrated on the fact that in other respects the situation of world trade and economy continues in the main unaltered. It may be supposed that those artificial barriers of trade, which resulted from the difficulties of debtor nations to effect transferences of value sufficient for the settlement of their foreign obligations, will disappear when the currencies of their creditor countries have been depreciated and freer exports of their staples are thereby rendered possible. But tariffs are woven more deeply into the web of political and economic life in each country. And it would be idle to hope that, on the strength of such revival as may occur, the nations would consent to abandon the fate of their infant industries to the mercies of an experimental free trade. Even more complicated is the question of ensuring an expansion in consumptive power. Such increase as may result from the increasing employment consequent on revival will, of course, be available to support the economic structure. But that such improvement will not be adequate for the purpose, no one will doubt. We have always been of the opinion that the balance between production and consumption has to be actively worked for within the sphere of each national economy; and so far, the United States offers the only example of a country following a deliberate policy towards that end. If Great Britain could have an early general election and see the advent of a Labour Government, not only to office, but also to power, it might well be that Britain would follow suit. But such a chance is to be ruled out as the British Parliament has a pretty long lease of life.

* * *

We believe we have said enough to show that, though the recovery may be helped in part by the assertion of cyclical impulses and mainly by the depreciation and inflation of currencies, the scope of the improvement will be severely restricted by the continuance of tariffs and, possibly, even their accentuation, and the unwillingness of the governments to work deliberately for the expansion of consumptive demand. That is, economic nationalism and the persistence of economic individualism will continue to hamper the resumption of the balance of economic forces. It is obvious that the conscious regulation and direction of productive activity, which is of the essence of economic nationalism, would be a woefully one-sided policy, if the State withholds its care and attention from the distributive side of the national economy. The hope of regaining the prosperity would seem to lie, therefore in the recognition of this fact by the Governments of the world, rather than in a fatalistic trust in automatic forces or in a repetition of the futile efforts to remove tariffs and rade barriers.

INDIA AND A WORLD ORDER

In the present situation it might seem a rude joke, if the average Indian is called upon to ponder over the international significance of the new constitution. And yet this is what one is called upon to do by *India Analysed*, a new publication to which a number of eminent professors have contributed. Behind the vista of the future possibilities presented by the professors, lurk all our present discontent, the distempers wrought by the dubious results of the R.T.C. and the despair of realising in the near future even the most legitimate or even the most conservative aspirations of the nation. In a word, we in India are inclined to wonder whether the new constitution will possess even a limited national significance, not to speak of the international. But speculations about the future, or rather the dreams of it, are welcome, if only as an escape from the distressing present. And who can say that they lack all constructive value? We owe so much of the brighter side of the present to the bold visionaries of the past, that it is only just that we seek to stand in a similar relation to the future.

* * *

There is much more than sentiment in favour of such an attitude. When India takes her place, as the time-honoured phrase goes, in the comity of nations, she will find herself in an atmosphere different in many important respects from that in which she began the struggle for her political freedom. When most of us learned the stimulus of old Congress literature to yearn for Swaraj, we gave little thought to the possibility that Swaraj would have to function only after the world had made serious inroads into the concept of national sovereignty. To countries, whose foreign policy is untrammelled by

external interference, adjustment to new ideas of international order is a daily administrative responsibility, and is being carried out as such. But for us there is need to think out ahead the relation between the political freedom of India and the requirements of a growing international order.

* * *

It is obvious that there are necessarily two aspects to this question. One is the scientific aspect of having to clarify the ends and objectives which India as a nation would seek to subserve, and the other is the practical aspect of making provisions in her future constitution which would enable her to achieve, or help to achieve, those ends and objectives.

* * *

Indian nationalism has long flattered itself that it has a distinct contribution to make to the world. In a perfectly natural attempt to protect its self-esteem, it has all along affected a profound contempt for the ways of western democracies, and recoiled in horror from the squalor of modern industrialism and the selfish aggrandisement of nationalism in the West. Poet Tagore carried the war into the enemy's camp; and the non-violence of Gandhiji and his achievements therewith have made many feel that free India would play a different and vastly more inspiring role in international life than any other nation in the past.

* * *

But the hiatus between these dreams and the realities of our political situation is inescapable. And precisely for the same reason, let us try to bring the two in some sort of relation, other than glaring contrast. It is certain that at the time India gains her political freedom she will not be able to live a national life all by herself. It is certain, too, that at that time the accepted forms of political and economic government will be more in the melting pot than they are now. After nearly a half century of struggle for responsible government, we find that its most ardent worshippers are inclined to discard it as an obsolete fetish. We looked wistfully at the industrial progress of Britain and America; but our eyes have now been opened to the insufferable dangers latent in that position. We won after a hard fight the freedom to levy protectionist duties, but only to listen from one and all sermons on the sin and folly of economic nationalism. If these are ruled out of immediate consideration, the disillusionment about democracy would seem to paralyse all action.

* * *

It stands to reason that the principles of our future policy can emerge only if India is set in the midst of a world groping its way to a better sense of values and a better social order. In other words, it is only by setting India in perspective that we escape from the bewilderment caused by concentration at close range. The editors of the series, of which *India Analysed* is the first volume, have shown a correct instinct in placing the international relations of India in the forefront. The first and the last essays of the volume are of wider and more abiding interest, in that Prof. Zimmern examines the relation of India to the world situation and Mr. Jenks the international aspect of the Indian constitution. Both are agreed on assigning India an important place in the current of world affairs in the future. In fact, Prof. Zimmern ventures the statement that "the emergence of Federal India within the family of nations will be a considerable event in the field of international politics" and that "India is the pivot of world politics in the coming generation." His argument in favour of this view is simple.

> "If India preserves her association with the British Commonwealth, and the Commonwealth, on its side, gives India the place in its system and in its counsels which is due to her, the prospects for world peace and general human progress will be immeasurably increased. If, on the other hand, the effort to establish an equal partnership between India and the other British Dominions should break down, the consequences would recoil, not simply on the parties immediately concerned, but on the whole human family. The stage would be set for an inter-racial conflict of incalculable dimensions."

The weight of India is essential for preserving the balance of racial equality and saving mankind from the disaster of having its affairs settled on the most irrational basis of colour or complexion. If India is to throw the weight of her influence in the scale of reason in politics, she cannot reserve it for international affairs and keep her internal politics singularly free from it.

Prof. Zimmern, therefore, makes a brief analysis of the concept of the State. "Is a State" he asks, "a grouping of human beings with distinctive characteristics, whether of mind or body? Or is it a grouping of human beings within a given territory in virtue of their human quality, irrespective of their idiosyn-

cracy?" If the State is a territory in which men are living under a common law, then it should be possible for men with dissimilarities to live together under its aegis. It is the very nature of law to make no difference between persons, for it is concerned with men as human beings in society; and far from attempting to eliminate dissimilarities, it should be the purpose of law to render their continued existence possible. For the dissimilarities become relevant to the purpose of law, only when they lead to its transgression. Despite a touch of old world theology in it, it is still substantially true that the "state should neither seek nor care for the passionate response which men reserve for those who have stirred the depths of their spiritual feeling."

* * *

Translated into more practical terms, it would mean that the State would never be justified in tampering with the intimate beliefs and habits of people and that the law should contain no threat thereto. Such mentality it is, that will enable dissimilar men to live together amicably under a common law. The question would, therefore, be whether the new state in India is to be "a citadel of power or a realm of law." Prof. Zimmern warns against the attempt to form homogeneous national states on the European model, either within or without the British Commonwealth, and pleads for the "alternative goal of an India which shall be a realm of common law for all those who dwell within her borders, enabling them, each and all, in the diversity of circumstance, to live the life of their choice."

* * *

The significance of such a State in India would be that "it would stand as an example, a shining and, it must be added, a shaming example to other political communities where, in the name of the rights of the people, prejudice and discrimination still stir bitterness in men's hearts and delay the realisation of justice and freedom."

* * *

The vision is inspiring. But what of the reality? Too often have we seen in the cities of India the tragic loading of our communal squabbles, the effete counterpart of the tumbrils of the French Terror. The dissensions have increased, rather than abated, with the first sign of coming freedom. Is it ever possible that each section will concede to every other the right to live the life of its choice? Much as there is reason for pessimism now, may we not derive hope from the fact that here at least the attempt at securing dull uniformity is bound to fail? No more can the Hindu stamp out the Muslim, than Indian economy can establish itself on the expropriation of the British. Are not conditions here ideal for the ultimate, if not early or altogether painless, realisation of the truth that the State must be a realm of law and not a mere citadel of power? That India is not to have a unitary, but a Federal, government, with due recognition of the rights of the component units, is itself an encouraging circumstance. What remains is to bring about a widespread recognition that Federation is less a legal device at the partitioning of sovereignty than a vital principle of social life. It is, in fact, the negation of the right of the Sovereign to interfere in an arbitrary manner in the non-political life of groups and individuals. The future democracy of India can never afford to forget that the evils of arbitrary power had been heightened, rather than reduced, by the substitution of an abstract demos in the place of the old arbitrary monarch.

* * *

International life reached the stage of incurable belligerence, mainly because the personal ambition of monarchs had been replaced by the confidence of the Cabinets that every war of aggression has behind it the sanction of a free people. That this is not accurate, we are slowly realising now. And the time is opportune both in view of this realisation and from the standpoint of the exigencies of world peace, that every constitution should contain provisions to ensure that active hostility has the sanction of the people or their representatives in the Legislature, and to render it increasingly difficult for governments to stay the progress of the nations to a world order.

* * *

Mr. Jenks who writes the last essay in *India Analysed* examines the international aspect of the Indian constitution. It is a highly stimulating thesis which, with wider acceptance, may effectively curb the power of governments to declare or prosecute wars. He holds up the example of the constitution of the new Spanish Republic which, despite certain obvious defects of procedural detail, contains safeguards against the country being rushed into policies which are not in consonance with the international obligations of the nation. The constitution provides that if the Government declares a war in contravention of its sacred obligations under the Convenant and the Pact of Paris, it would not have any constitional or legal validity at home. It was only some time ago that it was urged by a prominent politician in Great Britain that the best way of strengthening the hands of the League of Nations would be to embody the international obligations of Great Britain in so many Acts of the Legislature, so that when the Government tries to mobilise its armed forces for the purpose of a war which is against the principles of the Covenant or the Pact of Paris, such action would be definitely illegal under the law of the land. Mr. Jenks has made a fruitful exploration of the possibilities of such a position; and his arguments have been strengthened by what the founders of the Spanish Republic have done in the first flush of their enthusiasm.

* * *

The more immediate purpose of Mr. Jenks however, is to examine how far the proposals contained in the White Paper enable, or disable, the future Federal Government of India for implementing the international understandings to which she is, or she might be in future, a party. As in all other federal constitutions, India, too, would find it difficult to get over the autonomy of the States, if not provincial units, in respect of internal affairs. Past experience has shown that the states have been none too ready to come into line with British India in respect of giving effect to the decisions of the International Labour Conferences. Such recalcitrance, if it should

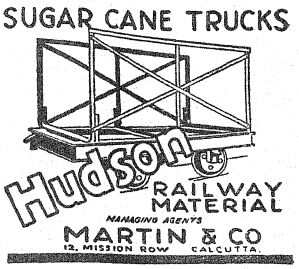
Clive Street Gossip



"Eavesdropper" writes from Delhi:—

Came—Saturday;
Saw—Sunday and Monday;
Routed—Tuesday.

One hundred Caesars could not have "conquered" in the kind of conditions now obtaining in New Delhi. "Coming" and "Seeing," one can essay. Conquest is a different matter. Victory for the Opposition was nowhere in the picture—never in prospect. Defeat was a foregone conclusion. I could not, therefore, plead that disapointment came on me like a shock. Dr. Ziauddin Ahmed gave a dinner on Monday night, whereat were foregathered most of those that were prepared to stand by the main Minute of Dissent on the Reserve Bank Bill. *Moghlai Khana* was served with the sumptuousness and heartiness which are always associated with these frequent functions in the Doctor's bungalow. The feast was good; it also gave a good tone to talk and a good temper to outlook. "What if we are defeated?"—argued our friends. "We can, possibly, muster together only 35 true and trusty men in our lobby at division time. But, then, the world will know who are the true and trusty men amongst those that make up the present Assembly. And, who knows, we may even succeed in winning a majority on such amendments to the shareholder plan as have been universally agreed to as the minimum necessary. More. We may even be able to score a majority; though a bare one, on the ratio question, if we only evolve a formula acceptable to all."

* * *

Dr. Ziauddin is a reputed Mathematician and a Wrangler. He declared that on each main issue, count should be made of the likely adherents to the Opposition standpoint. Mr. Maswood Ahmed has all the keenness and insight of a first-rate whip. And, between the two, they took pencil and paper, scrutinised the list of members, and arrived at results somewhat as follows:

State vs. shareholders bank—35 votes for the Opposition.

Amendments on the shareholder plan—60 votes.

Ratio question—60 votes.

A great deal depends upon the committee which has been appointed to study all the amendments so far given and pick out those on which attention should be concentrated. As things stand, there are two principles to which great importance is attached; and they are:

(A) Every possible precaution should be taken to ensure that there can be no manipulation in anyone of the following three respects: (1) holdings of shares in reference to election to local bodies (2) number of members in local bodies in reference to elections to Central Board. (3) number of elected members on Central Board in reference to the nominated members and Governor's influence thereon.

(B) On the ratio question, nothing should be done which can be construed as ratification by the Assembly of the present ratio. At the same time provision must be made so as to make sure that the Government do come before the Assembly at an early date for its verdict on the ratio issue.

From the point of view of (A) emphasis is laid on the following modifications:

1. *Binami* holding of shares on behalf of a syndicate or clique seeking to secure control through voting should be prevented. There is even now a clause which seeks to cover such cases. But it is not specific, not drastic enough—it must be made fool-proof and knave-proof.

2. Instead of the local boards consisting of five members elected by shareholders and three nominated by the Central Board, eight should be elected by shareholders and two nominated by the Central Board. If Local Boards are intended to be electoral colleges, they should contain such a number as to make manipulation as difficult as possible. Five on one side and three on the other might mean, in the absence of any two of the five or the walkover of any one of them to the other side, a mere registering of the edicts of the Central Board. The elected element must be increased to a number at which manoeuvering of any kind would not be easy.

3. The elected members on the Central Board are now to be eight; the Governor-General-in-Council is to nominate four. The Governor is also to be nominated by the Governor-General-in-Council. The Rangoon member out of the eight may not be present at all the meetings. And if, of the rest, one succumbs to the influence of the Governor, the latter will have a more or less permanent majority. There is, therefore, every case for increasing the elected members to 13 by adding one member to each of the five regional electorates. The Co-operative Banks should also be entitled to elect a Director. Fourteen on one side, and five on the other, intriguing for control could be rendered a remote possibility. The Government could not urge that the Central Board will become too unwieldy. The various Bills of 1927-28 contemplated boards, the members of which were, in every case, above 20. The Bank of England Court consists of 24 directors.

4. The first directors should not be appointed by the Governor-General-in-Council. The Governor-General-in-Council should appoint a committee (or the Central Legislature should appoint a committee) which shall make the public issue of shares and look after the allotment on the lines laid down in the Bill. After the shares have been allotted, the shareholders should then proceed to elect members to the Local

Boards; and the elected members of the latter will, therefore, elect the members of the Central Board. This insistence on the election of the first Board as against the Government's proposal of nomination goes to the root of the matter. It is a vital point. If the Government do not accede to the point, it will mean that the Board will, from the start, be a replica of the political as a Director, once elected, is always a Director. If political influence from Indian quarter is undesirable, political influence from Government quarter is hundredfold undesirable.

5. There should be a definite provision that, at the end of, say, 15 years, the Government should have the option to buy back the shares. This is a suggestion made by *Indian Finance*. It received unanimous approbation in the Simla speeches on the Bill. Sir Leslie Hudson on behalf of the European Group, expressed concurrence in the proposal. It remains to be seen if he and his group and the others who supported the idea will now troop into the correct lobby when voting on this amendment takes place.

Now to the Ratio question: The Finance Member claims that the present Bill has nothing to do with the ratio. All that he wants, he avers, is the maintenance of the status quo as regards the exchange value of the rupee. And he maintains that clauses 40 and 41 maintain the *status quo*. This contention of Sir George Schuster is untenable. The present statutory position is that laid down by the Currency Act of 1927. That Act imposes an obligation *to buy gold and an obligation to sell gold or at the option of the currency authority, sterling at an equivalent rate of* 1*s.* 5 49/64*d*. The obligation to buy gold is ineffective since the abandonment of the gold link. This means that, while selling obligation is effective, buying obligation is ineffective. In other words, the Currency Act of 1927 gives us a lower point for a sterling standard but does not give an upper point for a sterling standard. 1s. 6d., sterling is therefore, in no sense a *de jure* ratio. Raja Bahadur Krishnamachariar pointed this out in his speech last week; and Sir George roundly contradicted him and blandly asseverated that we have a statutory upper point in terms of sterling. I challenge Sir George to prove his statement by reference to the relevant sections of Act V of 1927. I am afraid, Sir George has not either read the Act carefully or understood the sections correctly. Before he makes a categorical statement of this kind, it was up to him to have verified his information and his impression.

As it is, I do say that he has misled the House either unconsciously or deliberately. I hope, Raja Bahadur Krishnamachariar would challenge Sir George, in a later stage of the discussion, on the accuracy of his statement. It is unthinkable that so responsible an official as the Finance Member should allow a mis-statement to be placed on record. It is up to him to prove his contention or own his error. If he can prove *Indian Finance* to be in the wrong on this question, we shall be only too glad to publish his case and, if convinced, admit our mistake.

According to our understanding of the legal position, then, there is no *de jure* ratio, as a ratio in reference to the sterling standard implies both an upper point and a lower point, and as the Currency Act of 1927 does not contain a provision for purchase of sterling at the so-called upper point. But the present Bill proposes both an upper point and a lower point. This means that the Bill does not maintain the *status quo* but seeks to give a legal sanction which is absent to-day. The Assembly could not be a party to this. Nor will Sir George, in insisting on these two clauses, be true to his claim that he does not intend to utilise the Reserve Bank Bill for any sinister purpose in behalf of the ratio.

Keeping the above argument in mind, the clauses should be altered as follows:

For Lower Point: The Reserve Bank to sell sterling at the rate which is *de jure* rate on the day prior to the setting up of the Reserve Bank.

The changed clauses may be claimed to maintain the *status quo*. This meets Sir George's view. But as there is no *de jure* buying rate for sterling (that is, upper point), the Government will have to come to the Assembly, before the creation of the Reserve Bank, for the insertion, in the Currency Act of 1927, of the provision for the upper point. This meets the view of the country that the Assembly should have an early opportunity of dealing with the ratio question.

From the discussion I have set down in this week's Gossip, it will be obvious that the changes asked for are so reasonable that Sir George should be ready and willing to accept them. If he accedes to them, the Bill will have a smooth passage. Otherwise, the Opposition side has, certainly every cause to feel that the utmost effort should be made to carry out these reforms as the barest minimum; and to snap a victory on most of these matters is not altogether outside practical politics.

* * *

Meantime, Sir George may derive what satisfaction he can, from his victory on the state vs. shareholders bank by 76 against 33 votes. All the leaders, acting or otherwise, of all the parties (with the honourable exception of the Democratic Party, of which Mr. K. C. Neogy is the Leader) voted with the Government. A more humiliating spectacle, it has not been my lot to witness.

The leaders must be enshrined on record:

Sir Cowasji Jehangir, Acting Leader, Independent Party and Acting Leader of the Opposition.

Mr. C. S. Ranga Iyer, Acting Leader, Nationalist Party.

Raja Bahadur Krishnamachariar, Leader, Central Party.

Mr. Yamin Khan, Leader, United Party.

Sir Leslie Hudson, Leader, European Group.

Sir B. L. Mitter, Leader of the House.

(3) to (4) are quite intelligible. Why (1) and (2)? London air and blandishments did the trick with two acting leaders of two parties claiming nationalist leanings and with one Deputy Leader.

Snare! Thy name is London.

The most piquant comic-tragedy is the leader of the Opposition deserting the Opposition and hurrying, faster than anyone else, into the Government lobby. Sir Cowasji has proved himself, like the Indian Civil Service, to be neither leader nor opposition nor leader of opposition. It is all a misnomer, a thing which negates all established parliamentary practice and tradition.

The rank and file of the three parties that count played the game, as will be seen from the following list of members who voted for the State Bank:

* * *

Mr. Sitarama Raju, Mr. P. G. Reddy, Mr. Ramakrishna Reddi, Mr. Thampan, Sardar Sayyid Murtaza, Sardar Uppi Saheb, Mr. Vidyasagar Pandya, Dewan Lalchand Navalrai, Mr. Jadhav, Mr. Patil, Mr. Amarnath Dutt, Mr. Neogy, Mr. Mitra, Mr. Lahiri Chaudhry, Pandit S. C. Sen, Dr. Zia Uddin Ahmad, Mr. Azhar Ali, Mr. Aggarwal, Mr. Baghatram Puri, Sardar Sant Singh, Mr. Ramkrishna Jha, Mr. Gaya Prasad Singh, Mr. Mahapatra, Mr. B. Das, Mr. Maswood Ahmed, Mr. Badiuzzaman, Maulana Shafi Daoodi, Mr. Bhuput Sing, Mr. Phookun, Mr. Gopikaroman Roy, Mr. Matin Chaudhury, U. Sung. Mr. Jog.

THE GATEWAY OF INDIA

Bombay, December 5, 1933.

Calcutta has an incontestably stronger claim to be called the city of the Scotchman than Bombay. But this does not prevent St. Andrews Dinner from taking its pride of place in the social functions of this city. True it is, Calcutta views the Dinner from a long time ahead with more jubilant feelings than Bombay. The mental make-up of the European there is distinctly different. After all, he is the top-dog in your place and, hurtful as it may be to Bengalee pride, the Scotchman has a valid claim to having built the second city of the Empire, *pace* my co-citizens here. And he struts and swaggers with a self-confidence, which his countrymen in Bombay can imitate but feebly. But once at the table, these depressing differences fade away from the minds of the diners. They persist, however, in the minds of the onlooker. And looking over the two functions, one is struck with the somewhat poor quality of the speeches delivered here in Bombay. The Calcutta speeches, are more full of wit, when politics is out of the way. And even when political questions are touched on, they are more arresting, more daringly aggressive. The speeches in Bombay were dull, drab stuff. Nervous nibbling of political issues, stale compliments to all the high and mighty, platitudes and shibboleths, all trite of the most uninteresting kind.

His Excellency Sir Frederick Sykes for once lowered the key from the high pitch of his recent speeches on rural reconstruction. He muttered the hope that the lull in the Indian political world would not prove to be the calm before the storm. Amen. But why attempt to define the conscientious politician as one, in effect, beloved of the Govt.? And why again—which is even worse—this *obiter dictum* that "comparatively few people care for political reforms"? Sir Frederick is clear that the "greater number want a quiet life and to carry on their business without interference." Sir Frederick apparently forgets that no one can have a quiet life or can carry on business without interference, unless others, too, can have a quiet life and have a business to carry on. Half the troubles of politics are due to denial to some of this right to life and business. I hope I shall not be told that, if one lacks a business to carry on, it is all his fault. If Satan finds work for idle hands, it is equally true that the present political and economic system is his most active recruiting agent. Altogether, the speeches are uninspiring; and the only intelligence of public importance that could be gleaned therefrom is that His Excellency the Governor of Bombay expects the finances of this province to show an excess of revenue over expenditure when they are presented in form three months hence.

The annual meeting of the East Indian Cotton Association which was held on Saturday last was the occasion for the President to air the grievance that Bombay's cotton trade was affected adversely by the continuation of the town duty. As may be expected, Mr. Haridas Madhavdas gave quite a long inventory of the grievances of the trade. Reference was made to the situation created by the boycott of Indian cotton by the Cotton Spinners' association of Japan. Mr. Madhavdas was inclined to think that the abnormal conditions caused thereby are diminishing, but that they have yielded place to a new danger contained in the depreciation of the American currency. He afforded the information in his speech moved in the adoption of the report that the Directors have decided to increase the strength of the Board from 15 to 20 in order to provide for the increased reprensentation of cotton growers to the extent of not less than ¼ of the total number of Board required under the Bombay Cotton Contracts Act, 1932.

The reconstruction of the Indore Malwa United Mills may be said to have progressed a step forward with the meeting of the Bombay depositors of the Indore Malwa held on Saturday afternoon at the new premises of the Company at 41, Bruce Street. It would appear that the reconstruction committee had received two offers for the agency of the mills, one from Messrs. Nandlal Bhandari and Sons, Indore, and another from Mr. Magtiramji Bangdad, Calcutta. Messrs. Nandlal Bhandari and Sons are managing two mills at Indore one bearing their own name and the other a State mill which they have taken on lease. Mr. Bangdad is a commission agent to several jute mills and collieries owned by Europeans. The former has offered Rs. 24 lakhs including Rs. 5 lakhs for goodwill against total deposits of 66 lakhs. It will be seen that the Committee would be able to pay from this amount about 5½ annas per rupee, the balance being provided for as second debentures offered to the depositors, Mr. Bangdad has made the more liberal offer comprising Rs. 37 lakhs in cash, from which amout the Committee would be able to pay 8½ annas to the rupee to the depositors and the balance in non-cumulative preference shares. After some discussion the meeting of the Bombay depositors accepted Mr. Bangdad's offer.

A sidelight into the state of industry in the Western Presidency is afforded by a *Times of India* report that two important industrial concerns, the Maharaja Cotton and Maharani Woolen Mills Limited of Baroda, have stopped work and have suspended payment to the depositors. It is stated that this decision was arrived at a meeting of the Board of Directors held on December 1st. It is also believed that the joint liabilities of these concerns amount to no less than 30 lakhs, from which it will be seen that if the mills should be obliged to close finally, the repercussions of such failure on the industrial and commercial concerns in the city would be very grave indeed.

An instance of the conflict between sound finance and the requirements of culture is afforded by the instance of the Standing Committee of the Bombay Municipal Corporation insisting that the grants to free compulsory primary education should be cut relentlessly to the bone. The Schools Committee originally presented a demand for an allotment of Rs. 4 lakhs over and above the current year's expenditure. The Municipal Commissioner reduced the demand by over 3½ lakhs; and now the Standing Committee of the Corporation has effected a further reduction of 2 lakhs from the Second Committee's budget, bringing it down to the vicinity of Rs. 30 lakhs. Those who applauded the action of the Standing Committee, doubtless, shed crocodile tears over the starving of primary education. But it does not impress them that no city or nation can enrich itself by impoverishing the minds of the young. They are not probably aware that even the most orthodox economists in the world to-day have come to regard with disgust the depredations which are carried out on human life and economy in the name of a balanced budget. If there is any sphere, in which the notions of balanced budget are harmful and out of place, it is that of the education of the young. And yet the action of the Standing Committee has been applauded; and on the Schools Committee has been foisted the reputation for "being prodigal with public money". There is much talk of the obligation of the Schools Committee to concentrate on increasing the efficiency of the department with the money it receives, instead of trying to get more and more from the general revenue. If the supporters of reduced school grants are equally enthusiastic in the cause of efficiency and education, it is up to them to see that there is no wastage in the administration of the Municipal schools. If they are not equal to the task, better a deficit of 3 lakhs than a deficit of healthy minds for generations to come.

OLYMPUS

(From Our Correspondent)

New Delhi, Dec. 5.

Another cry of "Wolf" in Indo-Japanese Negotiations—Playing for Time or Vantage?—No Bluff, but competent game—Forecast of Agreement before 'Xmas—Debate on the R. B. Bill—A brave fight against odds—Sycophancy run amok—Mr. Pandya's parable—Mutual compliments between Donkeys & Camels—Opposition's Final Plan.

So often has it been said that a 'critical stage has been reached in the Indo-Japanese negotiations that one is chary of saying it again. But this time, every one assures me, we are really witnessing on the stage the final denouement. Let us hope it is. Even the Hotel management, who were happy to have this windfall of Japanese custom, are getting weary of refusing accommodation to their old customers because besides the residential accommodation the Japanese have occupied numerous rooms for their Secretariat.

* * *

The forecast made two months ago that the Japanese would stay till the X'mas has turned out to be correct. Many apt descriptions have been given of the present position in respect of these negotiations. But the best I heard was from a leading official member of the Japanese Delegation. He said. "You must have heard how two people quarrel because their dogs have quarrelled. It looks silly to think that two persons can break their heads over dogs. But it sometimes happens. So is the case with these negotiations. All those who hear what is the point in dispute will think we are all silly, but somehow or other we have got stuck up. And there it is!"

* * *

Those who back Mr. Mody consider the Japanese are "bluffing". But I am not sure if it is only a bluff. The Japanese have calculated the cost of a break-up with India—indeed with the British Empire. They are ready to face the world with a new programme. They will have difficulties but they will get over them, because they have goods to sell and they are the cheapest and the most economical.

* * *

A great deal depends on what London thinks on the subject. I am told that a fortnight ago diplomatic influences were working from London on the side of a settlement. But since then nothing has been heard. Is it that London is now feeling indifferent?

* * *

One Indian Delegate told me that the attitude of the Japanese Delegates changes from meeting to meeting. It may be they are manoeuvring in the best way they can for advantage. It may be they, too, are counting on the American exchange situation developing more assuredly so that they may think thereafter of buying American cotton.

* * *

In any case both sides are to blame. I still feel, however, that a settlement is coming and that before we disperse for the X'mas, an agreement would be concluded and sent to London for ratification.

* * *

The Reserve Bank Bill continues its smooth course towards its final passage. The debate has been long and weary. The Opposition benches felt somewhat worn out and exhausted. Any Opposition would, when odds are so heavily against them. But I must say they have done their best.

* * *

The difficulty has, of course, been that the Opposition benches lack leadership and constructive brain on financial matters. Their best asset was lost, when Sir Shanmukham Chetty took the Chair. But the general knowledge they have displayed has been worthy of the praise they won from Sir George Schuster.

* * *

It is only Mr. Anklesaria who ventured: "None in this House except Sir George Schuster knows anything about finance". Even so ludicrous a failing as sychophancy has its limit. And, needless to say, Sir George Schuster was more than embarrassed by this remark. For this is not the first time that Mr. Anklesaria has made Sir George the victim of his proclivities as a courtier. On a former occasion, on board a ship, Mr. Anklesaria kept on proposing Sir George Schuster to the Chair, every day, for the evening lectures, till the natural deference to Sir George broke under this heedless strain; and when one day the rival name of the Maharaja of Alwar was proposed and carried Sir George had to look small. One can well imagine the feelings of the hero to his worshipper.

* * *

The Debate on the Bill was conducted in the best of spirits on either side. I think Mr. Vidya Sagar Pandya took the palm in telling stories which described the position most appropriately. Member after Member was bewailing the unholy alliance which had made Mr. Ramaswami Mudaliar and Sir Cowasji Jehangir (not to speak of Mr. C. S. Ranga Iyer) outherod Herod in defence of the Shareholders scheme. Mr. Pandya described the situation most aptly.

* * *

Quoting a Sanskrit story he said. "There was once a marriage feast arranged by the camels. Donkeys were invited to cite hymns. The donkeys spoke in terms of admiration of the fine stature of the camels and the camels praised the 'melodious voice' of the donkeys." Sir Cowasji enquired who are camels and who are donkeys. The House echoed and rechoed. "Let them whom the Cap fits wear it."

* * *

Now the Bill is undergoing second reading. The wholesale condemnation of the scheme having already been voiced effectively, the Opposition parties are concentrating their attention on making such changes in the Bill as would make the shareholders' scheme less objectionable. They have held conference with Mr. C. S. Rangaswami, who was specially invited by them to advise them on the subject.

* * *

The plan to be adopted is firstly, to see that *benami* holdings of the Reserve Bank shares are made a grave penal offence; secondly, that elections to the Local Boards are more broad-based than at present; and thirdly, that the constitution of the Central Board does not lend itself to manipulation by the Governing agency through influencing a minority of elected Directors to join hands with the nominated Directors.

* * *

How far these proposals will succeed, it remains to be seen; but the Opposition is very earnest and will fight to the last.

"HILL-BIRD"

SOUTH INDIA

(From Our Correspondent)

Madras, December, 5.

Thanks to the Estates Land Amendment Bill, we in Madras have now two serious agtations of an agrarian significance. The agitation for the remission of land revenue continues with unabated vigour; and the justice of the cause has now succeeded in recruiting the support of the leading economists of South India. An article in a recent issue of *The Servant of India*, it is interesting to note, contains an examination of the question with facts and figures, which are powerful weapons in the armoury of the landholders of this province. The writer points out that the land revenue policy of the Government is more of an executive fiat than one based on proper legislation. Apart from the obvious fact that in the constitution under which we live all state policy is but a bundle of arbitrary orders of the executive, the writer might have gone further and pointed out that the land revenue policy has no relation to the economic capacity of the cultivator or the landowner to pay. It is interesting to learn that in the land revenue assessments of the Trichinopoly District, there was an enhancement of 63 per cent. in 1894 and 18¾ per cent. in 1924. Tht fact that for more than half a century prices were steadily increasing blinded the landholders to the possibility that at any time they would be faced with the difficulty of paying their land revenue solely on account of a disastrous fall in prices. And yet to-day the fact is that the present price is only 12 annas as against Rs. 1-0-8 per kalam which is the commuted average price of paddy as fixed in 1893 settlement for the Tanjore District. The 1893 figure was an average of prices from 1863; and while the subsequent enhancement of 1893 and 1923 have increased the assessment of what it is now, the prices have gone back to the level of 1863, that is, prices which are not within living memory. It will be seen, therefore, that unless the State takes the view—an extremely untenable and ludicrous suggestion that!—that the land revenue settlement is a contract between the State and the tenant and that, whatever happens, the State is entitled to its pound of flesh, it is difficult to see how the demand for remission of land revenue can be resisted. When the demand is strengthened by such economic reasoning, the necessity of the Government to maintain the provincial revenue at their present figure can form no answer thereto.

The present position brings into distressing relief the disparity between land revenue system of India and that of other countries. And even in India the Taxation Enquiry Committee definitely recommended, in spite of their differences of opinion as to whether land revenue was a tax or a rent, that the Government's share of net income from land should be lowered by at least a half. The present occasion is, perhaps, very appropriate for reflecting on the consequences of leaving a disproportionate burden of central and provincial taxation on land. This has meant in practice that no avenue is left for local taxation. When local bodies are so starved of income, the functions of the State to the individual citizen, which are performed in increasing measure in foreign countries, have to be totally neglected in this country. If we are to make any progress in nation-building in the future, the first step to that end must lie in a reduction of the burden of taxation on land and making it available more and more for levies of a local character. This is exactly what has been done in most other countries; and till such a step is taken in India, it is idle to expect either an increasing standard of living of the rural masses or their better organisation for purpose of increasing the economic and the moral strength of the people.

Despite the growing urgency of the land revenue question, it has for the moment been thrown into the shade by the grievances of the inamdars who have apart from the questions of equity involved in the new legislation, been made the subject of an attack from ambush. In the controversies connected with this question, it is necessary to keep two major questions quite distinct from one another. In the first place, it is bare justice to make sure that piece of legislation, which has affected the proprietory rights of large classes of people, is passed into law after the due observance of the necessary legislative processes. I say legislative processes, not in the strictly legal sense of ensuring that the Act will not be quashed in a court of law on grounds of defective procedure, but in the sense that care should be taken to ensure that the parties have had the requisite opportunity and time to plead before the public, on the majority of which the ultimate verdict must inevitably lie. It will be seen that this question has little or nothing to do with the questions of equity and justice involved in the conferment of occupancy rights on the tenants of inam lands, though of course in regard to the latter, too, there is much to be said against the legislation which is now awaiting the formal consent of His Excellency the Governor.

As in the case of the remission of land revenue, in this case also, numerous district associations of Inamdars are being formed and public meetings have been held all over the Presidency to protest against the action of the provincial legislative councils and to prevail upon His Excellency the Governor and His Excellency the Viceroy to withhold their assent to the new legislation. A Presidency Inamdars' Association has been formed; and doubtless there will be a marked response to the Association's appeal for funds for conducting an agitation.

Meanwhile, Mr. T. R. Venkatrama Sastri, an ex-advocate General and a public man of acknowledged probity and ability, has taken the cudgels on behalf of the inamdars. He has issued a reply to *The Servant of India* which in an editorial article of November 16, took the view that, though the procedure adopted in the case of the Madras Estates Amendment Act is defective, the provisions regarding the rights of tenants in inams marked a step in the right direction. Mr. Sastry begins with setting out the circumstances which render the procedure highly irregular and make it incumbent on the Government to cancel the Bill and return to more equitable process of dealing with the question.

One could hardly do better than to recite those circumstances in Mr. Sastry's own words:

> The Bill was amending legislation. It did not contemplate the creation of new rights. The introducing speech did not foreshadow it. The Select Committee did not consider it. I am told that an inamdar's representative, waiting to be heard, was told that he was not going to be touched and he had no need to hover about. Then came the amendment. I am told again that the mover of that amendment said to the Leader of the Opposition that he was not particular about it and would not move it, but subsequently moved it.
>
> The Revenue Member at one stage, in explaining away his own previous assurances, stated that the amendments brought the thing in and he was not responsible, and at another stage justified the amendments as having had sanction of Sir K. Srinivasa Aiyangar and Sir C. P. Ramaswami Aiyar and therefore carrying out a settled policy, which he himself had in mind. It is difficult to resist the conclusion that questionable manoeuvres behind the scenes deflected the originally contemplated lines of legislation and the member-in-charge surrendered his sounder judgment to those who persuaded him—wrongly as he realised too late,—that Sir K. Srinivasa Aiyangar and Sir C. P. Ramaswami Aiyar,—both of them Advocates-General and members of Council,—favoured it.
>
> Every one will agree with you that legislative decency, if nothing else, requires that the amendments should be cancelled by appropriate return of the Bill and a new bill to effect those amendments should be brought after due notice.

In this both Mr. Sastry and *The Servant of India* are in agreement. *The Servant of India* has also contended that social justice is in favour of the change embodied in the new bill. By which it means that it is a change for the better that the inamdar should be deprived of the right of eviction of tenant, not so much with a view to restrict his proprietory right as to disable him for screwing up the rents with constant threat of eviction. *The Servant of India* apparently does not believe in the so called sanctity of private property; and it must be said to the credit of Mr. Sastry that he does not offer battle on a ground of his own choosing, but is prepared to meet on the common ground created by the admission that social justice might sometimes require measures which are commonly stigmatised as expropriation. "I ignore the principle," says Mr. Sastry, "that you should not take from Peter in order to endow Paul." He bases his argument on the fact that the inamdar is not, as may commonly be supposed, a fat landholder, who may undergo a process of healthy thinning in the interests of his lean and lanky brethren. In most cases, the inamdar is nominally the deity of the village, the real beneficiary being in one sense the public for whose benefit the institution exists, and in a material sense the number of poor dependents who and whose families are maintained in return for specific services.

> These are receiving their doles, and with their families, often large, live on the margin of subsistence. The inam grants to individuals, not protected by a custom of impartibility or protective legislation of inalienability like Zemindaris, not protected from disintegration by the law of trusts like these institutions divide and subdivide and sell. The descendants of the original grantee possess fractional shares. Either they have divided the lands and are in possession, each of a few acres. Or they divide the incomes in all sorts of proper fractions. Much of all this in ultimate analysis will be found to be our eastern substitute for the Western Poor Law.
>
> Without careful investigation into each case, can you transfer property from one to another in the midst of all this mutually adjusted squalor? To my mind it seems wantonness to disturb it in the midst of world-wide depression and distress.

It must be confessed that the term inamdar has led to much misapprehension of the material circumstances of this class of landowners. There can be no doubt that just as in Bengal, rich and poor are covered alike by the term zemindar, which refers to the legal character of the land tenure rather than the size of the agricultural income, the inamdar, too, covers a whole gradation of landowners'. Mr. Sastry warns *The Servant of India* that when people talk of social justice in connection with the rights of of the inamdars, "they are in an unreal world where there are only two categories, the landlord and the tenant, and the tenant being the underdog must be protected". It is often the case that the tenant with his freedom to lease more lands is more well-to-do than the inamdar to whom he pays rent. While the significance of this point may be readily conceded, it is a question whether it is not substantially just if, irrespective of the material means of inamdars and tenants, the former are deprived of the right of eviction merely with a view to increase the rents. *The Servant of India* has, doubtless, raised prematurely the issue of social justice. And Mr. Sastry is right in uttering the warning that social justice might lead us astray in many such points. It is a fact that in the lobbying of the recent Amendment Act most of the big zemindars voted away the rights of the inamdars after gaining the full assurance that they themselves are not affected by this legislation. This shows that, if social justice is to be attempted piecemeal instead of in the broad, comprehensive plans of the Socialists or Communists, the weaker among the vested interests will go to the the wall, while the stronger are free to aggrandise themselves to their heart's content.

Indian Finance

MONTHLY REVIEW OF TRADE AND FINANCE

OCTOBER 1933.

The trade returns of British India for the month of October, 1933 afford a more cheerful reading than those of the previous month. While in our last monthly Review of Trade and Finance we had to point the unfavourable comparison of September trade figures with those of the previous month, on the present occasion, we are happy to record that the month under review shows favourably on all the usual bases of comparison. Even the import trade, which had till recently failed to participate in the all round improvement in our trade with foreign countries has, during the month, shown an increase of 21.4 per cent. as compared with September and 6.4 per cent. as compared with October, 1932. But taking the seven month period of the current fiscal year, the import trade still shows a shortage of 18.3 per cent. as compared with the previous year. There are not, perhaps, many in India who would regret the lag showed by the imports in respect of general recovery of trade. If one is not ashamed of evincing a somewhat Mercantalist attitude towards the country's economy, there is every reason to feel satisfied at the current developments. In the first place, there is a fall of 18.3 per cent. in imports during the first seven months of the year. Secondly, there is the equally welcome fall in the exports of gold from India which, during the month under review, amounted in value to only 3.44 crores as against 5.67 crores in October, 1932 and 9.05 crores in October, 1933. In the seven months in question, gold exports amounted to 31.60 crores as against 35.34 crores in 1932, a fall of 3.74 crores. The balance of trade in merchandise has improved to 19.61 crores in such marked contrast to an adverse balance of 6.77 crores in 1932. Considering that in 1931 the favourable balance of trade in merchandise amounted to no more than 15.28 crores, one might say that we have more than regained the ground lost during the period which is universally acknowledged to be the trough of the depression. As regards the visible balance of trade, it is encouraging to note that at 50.75 crores, we have more than doubled the figure of 22.44 crores in 1931.

It is interesting to look into the more detailed indicates of trade activity in India. Exports of raw jute during the first seven months amounted to 371,451 tons against 252,817 tons and 294,214 tons in 1932 and 1931 respectively. In value, too, the figure of 564 lakhs is a record for the triennial periods under consideration. These honours are also assured by the volumt and value of jute manufactures, as will be seen from the table on the centre of next page. Freight wagon loads at 3.4 million is clearly in excess of the figures for the last two years. But it is necessary to utter a warning against exaggerating the significance of these improvements in trade to the daily life of the people. For taking the month of October in comparison with the corresponding month of the previous year, it will be found that uniform increases in the volume and value of exports are still depressingly rare. Rice, for instance, rose in quantity from 72,000 tons to 91,000 tons but the value declined from 60.50 lakhs. Tea, on the other hand, dropped in volume but rose in value. Raw cotton registers a decline alike in quantity and in value. In raw jute, there was an increase in quantity accompanied, however, by a decline in value. Only oil seeds show evidence of an improvement, such as would induce the hope that economic conditions in the country are undergoing a steady improvement. But it is possible to derive comfort from the fact that so far, the trade returns for the seven months show a steady improvement without much of a setback.

STATISTICAL DATA FOR OCTOBER, 1933

	Oct. 1933	Sept. 1933	Oct. 1932
FOREIGN AND SEABORNE TRADE :—			
Exports Merchandise (Private) (lakhs Rs.)	12,61 30	11,34 31	11,50 26

*Weekly Average Returns.

The trade returns of British India for the month October, 1933, as compared with the preceding month, showed increases in the value of imports and exports while re-exports recorded a slight decrease. The value of imports of private merchandise totalled R 10,62 lakhs, an increase of R 1,87 lakhs as compared with the preceding month. The exports of Indian produce and manufactures rose by R 1,31 lakhs from R 11,30 lakhs in September, 1933 to R 12,61 lakhs in the month under report. Re-exports recorded a decrease of R 1 lakhs and amounted to R 30 lakhs.

Treasure on private account, including currency notes, showed a net export of R 3,29 lakhs in October, 1933 as against R 5,08 lakhs in the preceding month and R 5,64 lakhs in October, 1932.

Measured by the statistics of merchandise and treasure, the total visible balance of trade in October, 1933 was R 5,61 lakhs in favour of India as compared with R 8,57 lakhs in September, 1933 and R 7,46 lakhs in October, 1932. During the seven months ending October, 1933 the visible balance of trade in merchandise and treasure was R 50,75 lakhs in favour of India compared with R 27,22 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in October, 1933 was *minus* R 2,44 lakhs and in seven months April to October, 1933 *minus* R 27,20 lakhs.

As compared with October, 1932, the imports of food, drink and tobacco in October, 1933 decreased by R 17 lakhs to R 1,15 lakhs, while raw materials increased by R 42 lakhs to R 1,45 lakhs, and those of manufactured articles by R 40 lakhs to R 7,79 lakhs. Under food, drink and tobacco, imports of sugar 16 D.S. and above (including beet) declined from 38,000 tons valued at R 42 lakhs to 21,000 tons valued at R 22 lakhs. The imports of betelnuts declined in quantity from 97,000 cwts. to 87,000 cwts. and in value from R 10 lakhs to R 8 lakhs. Arrivals of raw tobacco rose from 17,000 lbs. valued at R 14,000 to 207,000 lbs. valued at R 2 lakhs. Imports of salt declined by 14,000 tons in quantity and by R 2 lakhs in value. Under provisions and oilman stores there was an increase of R 3 lakhs due chiefly to larger imports of biscuits and cakes and farinaceous and patent foods. Imports of rice not in the husk also rose from 1,300 tons (R 1 lakh) to 6,500 tons (R 4 lakhs). Arrivals of tea more than doubled and amounted to 767,000 lbs. (R 4 lakhs) as compared with 290,000 lbs. (R 2 lakhs). Under raw materials, the imports of kerosene oil improved from 1 million gallons valued at R 2½ lakhs to 9.7 million gallons valued at R 39 lakhs. Imports of fuel oil also rose from 8.2 million gallons to 11.2 million gallons. Imports of lubricating oils amounting to 1.5 million gallons showed an increase of 400,000 gallons in quantity. Imports of petroleum, dangerous flashing below 76°F including petrol, benzene and benzol declined from about 1 million gallons to 28,000 gallons in quantity and from R 4 lakhs to R 25,000 in value. Imports of coconut oil declined by 207,000 gallons in quantity and by R 4 lakhs in value. Raw cotton (chiefly imported from Kenya Colony, Tanganyika Territory and the United States of America) recorded an increase of 1,500 tons in quantity and of R 13 lakhs in value. Imports of raw wool fell off by 407,000 lbs. in quantity and by R 2 lakhs in value. Under manufactured articles imports of cotton yarn and manufactures decreased by R 69 lakhs. The imports of twist and yarn fell from 3.4 million lbs. to 2.0 million lbs. in quantity and from R 29 lakhs to R 17 lakhs in value. Under cotton piecegoods, imports of grey goods fell from 27 million yards valued at R 35 lakhs to 16 million yards valued at R 21 lakhs and those of white and coloured goods from 29 and 35 million yards valued at R 49 lakhs and R 65 lakhs to 15 and 20 million yards valued at R 28 lakhs and R 38 lakhs respectively. Under Iron and Steel there was an improvement of R 14 lakhs due mainly to an increase under sheets and plates. Imports of machinery and mill-work recorded an advance of R 61 lakhs due mainly to larger arrivals of sugar machinery. The number of motor cars imported amounted to 960 and that of motor lorries, buses and vans to 543. The value of motor cars imported in October, 1933 amounted to R 16 lakhs and that of motor lorries, buses and vans to R 6 lakhs. The imports of dues obtained from coal tar rose by 1,213,000 lbs. in quantity and by R 15 lakhs in value. The noticeable decreases were under piece-goods of cotton and artificial silk (−R 11 lakhs), and woollen manufactures (−R 3 lakhs) while cutlery, hardware, implements and instruments (including electrical instruments and apparatus) recorded an increase of R 7 lakhs

Compared with October, 1932, exports of food, drink and tobacco in October, 1933 rose by R 58 lakhs to R 3,55 lakhs. Shipments of rice not in the husk, increased in quantity from 72,000 tons to 91,000 tons but the value thereof declined from R 60 lakhs to R 56 lakhs. The exports of tea dropped from 51 million lbs. to 44 million lbs. in quantity but the value thereof rose from R 1,83 lakhs to R 2,56 lakhs. Shipments of tobacco unmanufactured declined from 2.3 million lbs. value at R 7⅛ lakhs to about 1 million lbs. valued at R 2½ lakhs. Exports of coffee fell from 20 000 cwts. (R 14 lakhs) to 11,000 cwts. (R 6 lakhs). Raw materials and produce exported increased by R 30 lakhs to R 4,86 lakhs. Under this group raw cotton recorded a decrease of 6,400 tons in quantity and of R 51 lakhs

in value. Of the total shipments of 15,100 tons, Italy took 3,100 tons, the United Kingdom and Belgium 2,300 tons each, France 2,100 tons, Spain 1,100 tons, China 1,000 tons, Germany 900 tons, Japan 600 tons, the Netherlands 500 tons and the French Indo-China 400 tons, the remainder being despatched mainly to Greece and the United States of America. Consignments of raw jute increased from 62,000 tons to 67,000 tons in quantity but the value fell from R 1,15 lakhs to R 93 lakhs. Exports of lac improved by 19,000 cwts. in quantity and by R 5 lakhs in value to 61,000 cwts. valued at R 18 lakhs. Shipments of oilseeds improved from 63,400 tons valued at R 1,05 lakhs to 136,700 tons valued at R 1,70 lakhs, groundnuts showing an increase from 39,800 tons (R 70 lakhs) to 61,800 tons (R 77 lakhs) and linseed from 7,000 tons (R 10 lakhs) to 57,300 tons (R 71 lakhs). Under rapeseed there was an increase in quantity from 7,500 tons to 9,100 tons but the value declined from R 11 lakhs to R 10 lakhs. Shipments of raw wool advanced from 3.2 million lbs. valued at R 11 lakhs to 5.9 million lbs. valued at R 20 lakhs. Exports of raw hides and skins rose by 300 tons in quantity and by R 5 lakhs in value. Exports of manganese ore advanced by 9,000 tons. Shipments of oilcakes rose from 20,000 tons to 22,000 tons, but the value fell from R 14 lakhs to R 13 lakhs. Manufactured goods rose by R 27 lakhs to R 4,09 lakhs.

The yardage of gunny cloth exported advanced from 92 million to 104 millions and the value from R 96 lakhs to R 1,12 lakhs. The number of jute bags shipped contracted slightly from 56 millions valued at R 1,52 lakhs to 55 millions valued at R 1,27 lakhs. Exports of tanned hides and skins rose by 400 tons in quantity and by R 11 lakhs in value. There was an improvement of R 14 lakhs in the exports of paraffin wax and of R 4 lakhs under pig lead while cotton manufactures recorded a decline of R 1 lakh.

The share of the United Kingdom in the imports rose from 36 per cent. in October, 1932, to 40 per cent. in October, 1933 and in exports from 28 to 36 per cent. The shares of Germany, Japan and the United States in the month under report were 8, 12 and 6 per cent. respectively under imports, and 5, 2 and 9 per cent. under exports.

The tonnage of vessels entered into British India and cleared outward with cargoes from and to foreign countries and British Possessions during the month of October, 1933, amounted respectively to 666,000 and 586,000 as against 566,000 and 647,000 in September, 1933, and 521,000 and 560,000 a year ago. During the seven months ending October, 1933, the tonnage of vessels entered and cleared with cargoes amounted respectively to 4,156,000 and 4,384,000 as compared with 3,874,000 and 4,059,000 in the corresponding period of the preceding year.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

DISARMAMENT DOLDRUMS

Last week, the departure of Sir John Simon to Geneva, in order to pull the fat of British prestige out of the fire of disarmament bungling, was announced. The Foreign Secretary has returned in time, to be present at the opening of the Parliament. He could pull the fat out; but, instead, he quenched disarmament by putting the damper of diplomacy over it. Thus, he is entitled to all credit for resurrecting in 1933, pre-War tactics. He has blessed armed-camp peace of pre-War days. The decision of the Disarmament Bureau, representing seventeen States, to submit negotiations to diplomatic machinery was a triumph for Signor Mussolini, and, therefore, to Nazi Germany which was reluctant to return to Geneva, unless and until the League of Nations was reformed to its satisfaction.

However that may be, France was naturally in high umbrage at the decision of the Bureau. On the last occasion, Sir John Simon scared Germany by his pretence of siding with France, without actually meaning it. This time, he made ample amends, to Germany, for his former mistake, by letting down France. To remove the Disarmament question, however temporarily, from the sphere of the League of Nations is nothing short of abject surrender to Fascist disgruntling. The Bureau has, however, been merciful to offer a sop for aggrieved France by letting technical committees to continue their work for another seven or eight days. The idea is to console France with the meaningless gesture of keeping up appearances, that Geneva still rules the roost of Disarmament.

But, what really alarms is that diplomatic negotiations will go beyond the framework of the Disarmament conference, and in all probability a meeting of the Powers, chiefly interested in these problems, will be brought about, outside the League, during December. In these circumstances, the Resolution of the Bureau to adjourn till sometime after January 10, is sham. Diplomacy will play havoc with its age-old tactics of open agreements with secret understandings.

M. Avenol, the Secretary-General of the League of Nations has left for Rome, ostensibly to attend the funeral of Signor Scialoza, the former Italian Foreign Minister. But, he is to see Signor Mussolini, obviously with the object of discussing the conference of great Powers in December.

Mr. MacDonald's avowal that the Foreign Secretary went to Geneva as the Representative of the Cabinet as a whole, was intended to silence all reports of difference of opinion in the Cabinet on the policy and methods of Disarmament. But, Mr Churchill was keen as mustard, when he observed that the misfortune of the Foreign Secretary was amicable readiness, with which he undertook the advocacy or defence of any policy, entrusted to him by the Cabinet. He did not let go Mr. MacDonald unscathed, either. He characterised the Prime Minister as the real culprit, who had an extraordinary aptitude for allowing the blame for failures to fall on other people, thus escaping censure himself. But, the docile Sir John owned with amicable readiness that he was just as much responsible for the British plan as everybody else, and rounded it off with the remark "I do not disclaim a scape of it."

The die-hard Press and its henchmen are throwing bouquets on the Premier for his incisive reply to Mr. Lansbury's attack on the Government. Mr. Lansbury was taken to task for his remark in a recent speech, made outside the Parliament, that a Sheffield Firm had taken on 340 more men last month for armament work. Mr. MacDonald brandished, with great gusto, the assurance, given by Sir William Larke, that "there are at present no foreign orders for armament in the whole of Sheffield. But, the Premier could not help admitting that 20 per cent. of the firm's output represented arms, and that included manufactures connected with the naval programme. Then, the Prime Minister cited also the speech of the Chairman of the Birmingham Small Arms Company, who, at the annual meeting, explained that the arms factory would have been entirely idle, but for a few foreign orders which enabled the company to keep a nucleus of skilled staff. It passes all understanding why Mr. Lansbury should be railed at for careless statements, and the Premier eulogised for his incisive reply, when, on the Premier's own admission, the Sheffield Firm's output of arms represented 20 per cent., and the Birmingham Firm could keep the skilled staff in its arms factories engaged, only through foreign orders. Is it not clear, therefore, that Great Britain is forging arms, both for domestic use and for exports abroad?

In this connection, it will be of interest to advert to the Arms Debate before the Insurance Debating Society at Lloyd's on November 20, between Mr. John Foot, Ex-president of the Oxford Union and Mr. T. A. Blackwell, President of the Cambridge Union. The proposition was: "complete and immediate disarmament is essential for world peace." The motion was, of course, carried. But, the real contribution to the debate was by Mr. Blackwell who clinched the question with his remark that, however essential complete disarmament may be, the outlook was very black. He said, very truly, that that was caused by a conflict of political ideals and clash of economic interests. He further observed that those, working for disarmament primarily were misdirecting their energies, and the dangers to peace were irresponsible politicians.

Before an Astonished House

Commendable as Mr. Lansbury's efforts for fishing out armament information are, he missed the key to the Disarmament Solution, so far as Great Britain is concerned. As the Cambridge men pointed out, armament flourishes on the clash of political ideals and the conflict of the economic interests. In their turn, political ideals and economic interests of Great Britain are in conflict with the rest of the world, because of the wholesale and exclusive industrialisation of the country. Agricultural advancement will have an indirect bearing—all the same very effective—on Disarmament.

The debate on the Labour Amendment to the King's Address was fruitful in throwing light upon the agricultural policy, even as it had done in betraying Disarmament mismanagement. Mr. Walter Elliot, Minister of Agriculture, made the House gasp with astonishment, by enunciating the vicious argument that more food should not be grown in Britain, lest it should endanger the position of its export trade. In reply to Miss Megan Lloyd George, who advocated the increase of the number of producers by encouraging land settlement by another half a million persons, Mr. Elliot was surprised at the demand, as the one million agricultural producers in Britain have already been producing food, sufficient for 20 million people. Miss Lloyd George's plea for increasing that number by a half would cause a domestic supply of food for 30 million people. Mr. Elliot drew up the picture of natural reaction on the overseas trade, in lurid colours. He argued that, if Britain did not receive its imports, she would be unable to send exports. He further remarked that the average British Producer cannot compete with the selected producer in those particular countries, whose output was considerable, and they were always

Air Mail Week

able to dump their surplus. He concluded that insulation of Home Markets would become essential, and that insulated markets meant insulated prices.

The Stock Argument till now for the heavy armament programme was that Great Britain had to depend on overseas foodstuffs and raw materials. To safeguard the tonnage necessary and the communications leading to the origin of food and raw materials supply, heavy armaments were in imperative demand. In order to pay for the foodstuffs and raw materials, Great Britain was compelled to send out exports. It is commonplace knowledge that, in order to ensure the steady flow of exports, Britain had to embark upon a policy of Imperialism. Now, therefore, if Britain could supply its own foodstuffs through the settlement in all, of say 2½ millions, and supply some of the raw materials needed by her through the employment of the remaining 2 million of the agricultural population, there will be no case for sending out excessive exports or zoning communications or in the ultimate analysis, to protect Dominions under the Imperialistic scheme. With the removal of these incentives to armament, Britain would easily put her heart and soul into the solution of the Disarmament Problem.

In this connection, attention may be drawn to the excellent article in the November issue of the *Westminster Bank Review* on the agricultural outlook. The fear of foreign dumping was met by the writer of the article, this wise: Individualism had made the farmer sceptical of the value of organised marketing and growing, which had undoubtedly played a large part in popularising foreign produce in this country. As India is interested in agriculture, excerpts from the said article are given below for rousing the rural population of India to better their condition likewise:

> "The Agricultural Credits Act of 1928 was an endeavour to deal with the difficulties surrounding the provision of credit and capital to agriculture, as regards both short-term and long-term borrowing. The Agricultural Mortgages Corporation, which was set up under this Act in the same year, had its capital subscribed by the leading banks. Its resources have been employed in loans against mortgages, with a few loans for improvements. At the date of the latest balance-sheet (March 31, 1933), total loans to farmers were shown at £9,485,475, of which £9,451,837 was in mortgage loans.
>
> "In the sphere of short-term credit, the Act encourages farmers to look for assistance to the banks, rather than to merchants, private guarantors, or other possible alternatives.
>
> "The facilities of the Agricultural Mortgage Corporation have been extensively used, but farmers have made less use of short-lived advances. The farmer has still failed to realise that borrowing is an ordinary business practice which is in no way discreditable to the borrower. Allied to his dislike of borrowing is an imperfect acquaintance with the technique of modern credit, which, as the Enfield Committee of the Ministry of Agriculture remarked, makes the farmer an inefficient borrower.
>
> "Farmers as a whole are still sceptical of the value of organised marketing and of the possibilities of 'planned' agriculture, but the value of the restriction of imports, and the fact that the immediate aim of the new organisation is to be a rise in prices, have resulted in a substantial progress with several schemes.
>
> "The farming community will doubtless bear well in mind that it numbers only one-tenth of the whole population, and if its prosperity is dependent on an artificial raising of the price of food to the other nine-tenths, it must inevitably be precarious.
>
> "There is ample scope for considerable benefit to the farmer without penalising the consumer."

Unemployment Insurance

In view of the major part of the work of the present session of the Parliament being in connection with the Unemployment Insurance Bill, some interesting figures are given from the *Ministry of Labour Gazette*:

> The total number of insured persons, aged 16 to 64 inclusive, at the beginning of July, 1933, was estimated for Great Britain and Northern Ireland at 12,883,000. For July, 1932, the total was 12,808,000, so that there had been an increase of 75,000 during the twelve months. Comparisons are given since 1923, and the total for last July is the highest recorded during that period. The figures for men, boys, women and girls for July, 1933, when compared with the previous July, were:—

Men	...	8,829,000	Increase	...	92,500
Boys	...	515,400	Decrease	...	50,900
Women	...	3,137,300	Increase	...	87,300
Girls	...	401,300	Decrease	...	34,400

> Of the 55 industry groups, 30 showed increases in the number of insured persons during the year ended June 30 last, and 23 showed decreases over the whole period 1927 to 1933 the numbers in employment rose by 249,000 in the Southern section and fell by 630,000 in the Northern section.

Trade Recovery

The broadcast speech, on November 23, of Mr. Walter Runciman, President of the Board of Trade, claimed credit for the long list of measures the Government had taken to help trade. He made a case for tariffs, and was proud that tariffs were responsible for the trade recovery. He, however, thought that the crisis had not been over yet. He mentioned this as a plea for remaining in power. He promised the public to see through the crisis. He would not leave the ship, while the storm lasted. But, his analysis was at fault in so far as he did not realise that the crisis was over, but that depression alone remained. The Governments while complacently ignoring the depression, is directed to fortify itself against the criticism of its low-grade performance, besides the desire to impress the public with the need for letting the Government remain in power for sometime longer. The recent by-elections at Risholme and Rutland have given the Government further cause for anxiety. In interested quarters, the conservative landslide at East Fulham, Kilmarnock, Skipton Rusholme and Rutland, the scene of the five recent by-elections, is sought to be explained away with the specious plea that comparisons with 1931 were not fair, and that they should only be made with the general election of 1929. Of course, the National Party misdirected the electorate in 1931. With its slogan, "Labour wants our money." In that sense, it is perhaps not desirable for instituting comparisons with 1931. The total vote, polled by the two largest parties at the recent by-elections are compared with that at the past two general elections:

			Conservative or National	Labour
General election	1929	...	80,031	57,603
,, ,,	1931	...	117,157	50,502
By-elections	1933	...	72,172	65,694

These figures conclusively prove that Labour is gaining support in the country while the Government is losing its strength in an equal measure, even comparing the present by-elections, with the general election of 1929. Government's achievements, however great in themselves, have pleased none but its members. Their claim to have ushered in Trade Recovery does not belong to them so much as to the usual cyclical impulse towards recovery which overtakes depression when a certain point has been reached.

Sir Walter Layton, speaking at the annual conference of District 13, Rotary International, on November 21, drew a true picture of the world situation. He said that there were 30 million of industrial workers in the world unemployed, and, in addition, agriculturists in unmeasured numbers were unable to sell their produce. Above all, international trade had been reduced, in three or four years, to something like one-third of its amount in 1929. He further said:

> "We have to face up to the effect of mass propaganda, and the suppression in many countries of freedom of speech and of the Press.
>
> "Politically the world to-day is in a very doubtful and uncertain state. Economically you may say unemployment is falling here, and trade is a little

Air Mail Week

better, but that recovery of trade cannot continue until world conditions improve.

"The monetary system of the world has broken down under the strain. In experimental solutions being tried, in one country after another, more nationalism is the favourite solution.

"A solution along nationalist lines means, even if it succeeds, prolonged adjustment, and that also means that some people are for a long period not producing anything anybody wants."

Lower Bill Rate

The desire of British authorities not to appreciate or depreciate sterling artificially has encouraged the flight to sterling, from the franc and the dollar. The immigration of foreign capital has outflanked the united front of the clearing banks, in their march for raising bill rates at a steady pace. The result was that discount rates had to be lowered to 31/32 per cent. It would appear that clearing banks took the cue from an official hint, discouraging the further rise in discount rates. The market interpreted this gesture as an indication of the Government's funding programme not being over. But, the truth of the matter is otherwise. The giltedge market was weak.

Although the banks reduce their buying rates, for three months' Treasury Bills, to 31/32, they could not succeed in buying at that rate. Successful buyers had to come down to $\frac{3}{4}$. It is believed that some buying was made at that rate on behalf of French banks. In all probability, foreign buying will continue, as long as the forward francs and other foreign exchanges remain wide in their respective discount rates. Incidentally, the banks, in view of the drawing nearer of the date for their balance sheet, are more keen on strengthening the giltedge market than on improving their buying rates for bills. Lower bill rates are bound to produce a healthy effect upon the price of the giltedge. The value of giltedge holdings of the banks is more important for the month or so, as they are heavy enough to outweigh the more momentary advantage of the higher discount rate policy. During the week, the giltedge market recovered to some extent. But, even then, a further rise in the bill rates has a remote chance. For, the foreign demand for Treasury Bills grows apace as the discount on forwards dollars and forward francs are at $8\frac{1}{2}$ cents and 82 centimes, respectively. The attitude of foreign buying is not determined by the rate of interest secured. Its aim is one of safe custody of foreign funds, irrespective of the rates of interest.

But, the clearing banks have been able to retain the discount rates at 1 1/16 per cent. for three months commercial bills.

Another evidence of the flight of foreign capital to sterling was afforded by the extensive financing operations of a leading London financial house. It is understood that the London firm, acting jointly with a house in New York and Paris, is financing extensive negotiations in cotton. These firms' ramifications extend throughout Europe. Large sums of dollars have been converted into sterling and the London firm has, in turn been advancing money to Liverpool cotton firms for the purchase of raw cotton. The advances amount to tens of thousands of pounds, and the Liverpool firms are to be paid a commission of 2 per cent. But, the financial house of London will earn its profit in the transactions, as the forward exchange rates are at a discount.

UNITED STATES OF AMERICA

DIE-HARDS' LAST STAND

Financial circles have never been friendly—and will never be so, to President Roosevelt's monetary policy. Their love of power, however indirect, over the Government, has been the main cause for their defection. It looks as though President Roosevelt is out to break their power as much for its own sake as for stimulating economic recovery. He is clear in his mind that these two objects complement each other. He is justified in this attitude by Wall Street events of recent years and the disclosures of recent months. Wall Street itself has not so far come into the open to attack President Roosevelt. But, evidence is not lacking that it is jubilant whenever any programme of the President fails, or meets with an obstacle. Moreover, in a large measure, it stage-manages the opposition to the President.

There is the academic and industrial group, which stands for immediate stabilisation on the gold standard basis; the section, led by Senator Thomas, is for some form of monetisation of silver. There is Father Coughlin of Detroit at the head of a very large following, who in a radio address accuses the financial interests of sabotage of the Administration's monetary programme. And lastly the Committee for the Nation persists in its efforts to realise a 50-cent. dollar. As pointed out last week, President Roosevelt has placated the farmers, the Labour, and the Church. This leaves only the big business and the financial interests to reckon with. Big business is on the defensive, and is not actively against the monetary policy of the President. Its only objection is against the recognition of trade unions.

Wall Street fighting shy of spot-light, because of its loss of prestige, consequent on its scrapes of recent months, and years, the opposition could not take a tangible form. In fact, financial circles have begun to develop the defeatist mentality, when Dr. O. M. W. Sprague, of great fame as an economist, resigned the post of Financial Adviser to U.S. Treasury. Dr. Sprague is well known in Great Britain, as he held the post of Economic Adviser to the Bank of England before he joined the United States Treasury. He sounded, through the publication of his letter of resignation, a call to arms against President Roosevelt and his economic advisers.

The academic and practical interest of the letter is world wide:—

"There is no defence from the drift into unrestrained inflation other than an aroused and organised public opinion. It is for the purpose of contributing as I may to such a movement that, with a feeling of profound disappointment, I sever my connection with your Administration.

"I accepted the position because I believed that at the time I was sufficiently in agreement with you on monetary matters to be able to render some service in working out policies designed to bring about trade recovery. Unfortunately, I now find I am in such fundamental disagreement with the monetary policies which have recently been adopted that I have decided to resign my post at the Treasury.

"I am opposed to the present policy of depreciating the dollar through gold purchases in foreign markets for two reasons.

"I am convinced that this policy will prove ineffective in securing a speedy rise in prices.

"The mere depreciation of the dollar in relation to the currencies of other countries will not bring a general rise in prices at a time when the nation has a large excess plant capacity and millions of unemployed. Such a rise must develop a sustained demand for labour and materials. There is nothing in the depreciation of the dollar to induce this increased demand.

"Doubtless, given time, the depreciated and devalued dollar will yield a higher price level, but this will only come when the desired trade recovery is realised. The present policy threatens a complete breakdown of the Government's credit.

"I believe you are faced with the alternative of giving up the present policy of meeting the Government's expenditures with additional paper money. You will then doubtless secure a rise in prices, for you will be faced with a distrust of currency already manifest in the growing flight from the dollar, but extending into a frantic desire to hold anything other than currency or securities yielding a fixed income return.

"When a Government announces its determination to depreciate its own currency, this can certainly be accomplished without the necessity of acquiring any considerable amounts of gold from other countries, since

Air Mail Week

no sensible person will desire in such circumstances to acquire more currency.

"Few export prices will rise like that of cotton. Imports like coffee, rubber and a few domestic commodities may advance somewhat, but the advance will rest on an unstable foundation, since there is nothing in the depreciation of the dollar to increase domestic consumption."

Dr. Sprague's attack has divided the country into two camps. It is a notorious fact that President Roosevelt has, all along, been ill-served by the Press. The majority of the newspapers are, therefore, friendly to Dr. Sprague's "sound money" cause, and nearly all the financial leaders are enthusiastic. But, the gauntlet was eagerly picked up by Prof. J. H. Rogers, of Yale University. He warned that those, who attempted to sabotage the President's monetary policy, will have to bear the responsibility for the really drastic scheme of inflation. Now that Dr. Sprague has cut the ice by offering himself as the rallying point, Senator David Reid of Pennsylvania, issued a statement condemning the President's experiments. Mr. James Warburg, who was the economical adviser to the American Delegation at the World Economic Conference has joined the rebel ranks. The latest entrant is "Al" Smith, who was President Roosevelt's principal rival for democratic Presidential nomination at the Chicago Convention. He wrote a letter to the New York Chamber of Commerce, denouncing the Administration. There have been other recruits also.

The occasion is eminently suited for enterprising journalists to further their propaganda by *suggestio falsi*. The New York correspondent of a London financial paper says that some even of the second grade men in the Treasury are expected to go, following the withdrawl of Mr. Woodin, who brought them there. One would like to ask the correspondent if these henchmen of Mr. Woodin have also fallen ill. For, it is clear that Mr. Woodin, the Secretary of the Treasury, is at present on sick leave, and his place has only been temporarily filled by Mr. Morganthau. The insinuation that Mr. Woodin has withdrawn from the Treasury on other grounds than health is given the lie direct, by his denouncement of Dr. Sprague's references to imminent peril of Government credit "as nothing more than personal spleen."

But, his understudy, Mr. Morganthau has nothing but contempt for Dr. Sprague's indictment, when he said that "the sun will rise again to-morrow just the same." The "sound money" men have but one desperate hope, that is, the coming meeting of Congress. The "sound money" group is planning a mass meeting, for Saturday evening. The inflationists are to hold a counter-meeting on the same night. Proof. Irwing Fisher and Senator Thomas both criticised Dr. Sprague, and urged President Roosevelt to continue his policy. The silver men, led by Senator Key Pittman, are behind the President. Above all, the Federal Reserve system advocates a policy of moderate expansion, which is obviously the intention of President Roosevelt.

Dr. Sprague has proved himself to be the victim of his own vanity, in that he complains against the failure of the President to afford him an opportunity to express his opinion on fundamental questions. The accusation is preposterous on the face of it. As financial adviser to United States Treasury, his work-a-day life is one of offering advice. Any way, his letter which has had world-wide publication, explains his views, as clearly as he may desire. But, President Roosevelt means to pursue his policy as before. In a day or two, President Roosevelt is to broadcast his speech from Warm Springs, where he is holidaying.

In this connection, it is interesting to notice that Sir John Wardlaw-Milne, Chairman, Equitable Securities Companies and Permanent Trust Companies, who was a member of the Imperial Economic Committee from 1926 to 1929, spoke at King's College, London, on November 21. Among other things, he said :

"We have been deflating continuously, and there is only one cure for deflation, that is inflation. It is the real cure for the world's present situation.

It can only be done by raising the whole purchasing power of the world by means of inflation. Inflation is in itself a perfectly balanced thing.

It is easy for us to say America cannot succeed. America's success is vital to the world. If she does not succeed, it will be a bad day for all nations—at least all of us should pray that she does succeed."

Dollar Excursions

Loyalty to "sound money" principles does not invest the arguments of the loyalists with soundness. By deliberate choice, the President has declined to place the cards of his policy on the table, and yet financial pandits are never wearied of offering advice to the President, only to find themselves in the wrong by the week-end. For instance, it was suggested that the buying price for gold should be reduced provisionally, rather than the gold price should be kept unchanged for longer and longer periods, if the authorities should keep control over the markets. The sale of gold in foreign markets, it stated, would be even more effective than the reduction of the buying price, in keeping the dollar rate in the close vicinity of its gold parity, thus obviating wide fluctuations. Towards the end of the week, the advice of reducing the buying price of gold or of selling price of gold in the foreign market, in order to regain control over the dollar, was found unnecessary. Last week, the gold buying price had to be left unchanged for five successive days before the control over the dollar was restored. But, this time the same end was achieved by leaving the price unchanged only for two consecutive days. It is, however, flattering for "sound money" men to attribute the strengthening of the dollar to the campaign against the President's policy. It is idle, therefore, to speculate upon what the President's intentions are on any given date. All that is clear is that he has the interests of the country at heart, that he has the skill to manage his policy, and that he has an open mind, receiving all criticisms of his policy with deference and adopting or rejecting them as circumstances warrant. He has proved, that he *can* control the dollar market through gold-buying price.

If commodity prices do not improve, as Dr. Sprague assures, through the gold-buying price, the President will have to seek some other venue of approach to national recovery. For, the country's prosperity is greater than the passion for any pet policy. In all probability, the "sound money" men's tactics may drive him into the arms of full-fledged inflationists. Greenbacks can be issued to a large extent against the surplus value of the gold reserve, held by the Federal Reserve Bank, or possibly against silver. If the dollar be devalued to 50 cents, the value of gold reserve will double itself automatically, and the surplus will be more than sufficient to cover the amount of greenbacks that may be issued. But, short-term obligations, to the tune of three-quarters of a milliard dollars mature by December 15. Until their renewal it is not likely he will deviate into the side-track of the greenback issue. A more plausible reading of the situation is that he will conserve his wits, till after the middle of December, if only to bring about a phenomenal rise in the level of prices on the eve of the meeting of Congress in January. By these tactics he may demolish the fond hopes of "sound money" men, who, after having sabotaged his monetary programme, expect to lash Congress into fury against President Roosevelt.

Since the flight of capital was banned, there has been little outflow of American capital. In all, a thousand million dollars are estimated to have fled the country. The American holders of franc balances have converted these balances into gold, and

Air Mail Week

the heavy loss of gold by the Bank of France was largely due to this operation. According to the current report of Robert Benson and Company Ltd., the exchange value of the dollar has been reasonably close to the gold parity calculated on the Reconstruction Finance Corporation buying and Bank of France selling prices. In fact, it has been slightly below that parity, with the result that the R.F.C. had not to buy any appreciable quantity of gold.

The secrecy of the President's monetary policies is criticised on the score of having created a "scare" in good many unwary investors, and that they have seized the ocasion to transfer their funds abroad, by buying stocks or commodities and selling the same in foreign countries. This is no criticism of the President's policy. To buy stocks or commodities, whatever the motive, must result in pushing up prices, and the export of the commodities purchased, in order to sell abroad, will operate towards improving the export trade. If this process goes on for a time and recovery really starts, as conditions in the rest of the world indicate, within a short time, the hoarded money, will, of its own accord, flow back to America for investment.

December 15 will be the occasion for financial circles to vent their spleen against President Roosevelt. They may refuse to take any more treasury certificates. But, there is the possibility of making the offer tempting by the sale of 9 to 12 month notes. The Treasury believes in the possibility of selling notes of that maturity. Mr. Morganthau, the Acting Secretary of the Treasury, cheered drooping hearts by declaring that "the federal credit is as firm as the rock of Gibralter."

U.S. and U.S.S.R.

President Roosevelt's Administration has recognised the Soviet Government. An agreement has been concluded, under which the Soviet guarantees religious freedom to American citizens in Russia, abstains from subversive propaganda, denies that the acquisition of economic information on the part of foreign residents is regarded by the Soviet Government as espionage, and waives its claims to any compensation on account of damages, arising from the American participation in the Allied invasion of Siberia in 1918. The method of settling outstanding claims, a Consular Convention and Trade Treaty, is to follow, after an exchange of views. Mr. W. C. Bullitt has been appointed the United States Ambassador to the Soviet. M. Troyanovsky would be the Soviet Ambassador in Washington. He was previously at Tokio.

It is estimated that the Soviet could assimilate 50 million dollars worth of raw cotton and 30 million dollars worth of cotton textiles. The American Manufacturers' Export Association predicts that between 120 million and 150 million dollars worth of trade annually will be possible with the U.S.S.R. Mr. S. W. Brookhart, the Adviser to the Farm Board, in this connection, said:

> "It happens that we shall be able to sell them two or three times as much as they can sell us, if we grant them proper credits. They need credits for five, six or seven-year periods. The Soviet Government is the best credit risk throughout the world, with the exception of the U.S.A."

Russia is also believed to be ready to place orders amounting to 500 million dollars for cotton machine tools, electrical equipment, railway material, etc.

The recognition of the Soviet Government by the United States of America should cause Japan to think twice before treading upon the toes of the Soviet. For several months now, the negotiations concerning the Chinese Eastern Railway were expected to come to nothing; and Japan would present another object lesson in the policy of forceful penetration. It was, no doubt, clear both to Japan and to the outside world, that Russia would not be ready for a war with Japan. But, the possibility, nay, the probability, of a Russo-Japanese war in the near future is expected. The drawing nearer of the United States and U.S.S.R., with a total of 270 million population, should rather induce peace in the Far East.

The Reconstruction Finance Corporation is moving apace with its guarantee fund. The Cleaveland Trust has increased its capital by the sale of 15 million dollars of 20 year 5 per cent. Capital Notes to the R.F.C. raising its capital fund to 35 million dollars.

On January 1, the law becomes effective guaranteeing deposits of 2,500 dollars or less in approved banks. The Guarantee Fund of the R.F.C., will be provided for, jointly, by the Treasury, by the Reserve Banks and by the initial assessment of ½ per cent. of the deposits of the associated banks. There are about 8,500 non-member banks, reopened indiscriminately by the various State authorities. A substantial minority of these have not, as yet, been made ready for qualification.

FRANCE

FALL OF THE SARRAUT MINISTRY

Speculation is rife as regards the fate of the franc. The immediate cause of the weakening of the franc was the defeat of the Government on the financial proposals. Unity of action, is not the normal characteristic of the French people. Only imminent peril of a strong national character and of a clearly perceptible nature, can induce the French to compose their differences. The weakening of the franc round about 83 or 84, has not produced any desirable effect on the French mind. The public, in spite of its commencing to hoard or to export capital, is not yet nervous regarding the national fortunes. In fact, the situation from the standpoint of national credit is not really alarming. The number of unemployed, drawing the state dole, is less than 245,000. Industrial protection is only 21 per cent. below the peak of 1930. The Bank of France can easily afford to lose even up to 50,000 million francs, before its defence of the gold standard can be effectively jeopardised. But, the seeming nervousness on the part of the French public is an illustration of erring on the right side through excessive and undue caution.

The ministry was blown to pieces on the rock of Socialist opposition. The Socialist amendment to raise the minimum limit of exemption from cut in civil servants pay, from 10,000 to 12,000 francs per annum, was stoutly opposed by the Govt. The motive of the Govt. in assuming an uncompromising attitude was to make its mind clear, as regards the conduct of civil servants, who were supposed to have perfected their arrangements for a general strike in the event of the passage of the Bill, imposing sacrifices on them. The Sarraut Ministry disputed the right of the civil servants to resort to strikes, as a weapon against their employers, the State. The Socialist Deputies, who sponsored the cause of the civil servants, defeated the Government by making the vote a question of confidence. Just after a month of its assuming office, the Sarraut Ministry met with the same fate as the Daladier Cabinet. There are only two alternatives for ending the Parliamentary deadlock. The advent of a Right-Centre coalition, or the dissolution of the Chamber of Deputies. The elections should certainly make clear the mind of the general public.

President Lebrun has summoned a few French statesmen, such as M. Herriot, M. Tardieu, M.

Air Mail Week.

Barthou, and others. It is understood that M. Herriot has excused himself for reasons of health. But, the real cause would appear to be that he did not wish to be in power until after December 15, the next due date of debt payment to the United States, as he still sticks to the view that France should pay. Among the possibles for the Premiership, M. Herriot was easily the most popular. He has been Premier on three occasions. With him at the helm, the ship of State should succeed in reaching the haven. M. Tardieu and M. Barthou advised the President to form a government like that of M. Poincare, in 1926. But, M. Blum, the leader of the big Socialist Party, was in favour of a National Union Government with the Socialists iin opposition. This is by far the most practical solution under the existing circumstances. For, the Government could have the support of a majority of the deputies, while the Socialist opposition will have numbers, sufficiently strong to hold the Government in leash. The result, then, would be the balancing of the budget without the infliction of unbearable hardships on the Socialist elements of Society. M. Caillaux and M. Daladier are also included among the possibles. But, President Lebrun is expected to ask M. Camille Chautemps to form a ministry.

As mamtters stand at present, only an external menace can rouse the Deputies to united action. M. Chautemps may profit by the defeat of the previous two ministries, and cause no affront to the Socialists and their proteges, the civil servants. Although national credit is not yet in danger, the Treasury is already sensing awkwardness in the near future.

The Treasury has, at present, about 2,000 million francs, an amount quite sufficient for government purposes during the current year. On November 18, M. George Bonnet, the Finance Minister, stated to the Finance Commission that demands for reimbursement of the 3,200 million francs of 5 and 10 year Treasury Bonds, maturing every month, exceeded renewals by over 750 million francs. Besides increased hoarding of currency by the public and the continued withdrawals of gold, deposits in savings banks are less than the outgoings. During 1934, the Treasury has, according to the Finance Minister, to find 17,000 million francs for meeting unavoidable charges. The budget has to be passed before December 31. There is thus barely time enough for realising the imperative need for balancing the budget. The fate of the Chautemps Ministry will be known by the middle of December. If M. Chautemps meets with the same fate as his predecessors in recent months, all indications point to M. Herriot as the fortunate Premier to rescue the country from the financial morass.

Flight from the Franc

The withdrawal of franc balances of the Americans for conversion into gold and the heavy selling of francs by the French should have weakened the franc even more but for the inverven-tion of the British authorities. The British Exchange Equalisation Fund was utilised for the purpose of heavy buying of francs at psychological moments, with a view to steady the franc from a steep climb-down. In certain quarters, it is criticised that the "control" should have raised the buying rate of francs suddenly to 90, instead of allowing the rate to rise gradually. Such a course, it is held, would have relieved the selling pressure on the franc. Other critics are, however, of the opinion that a section of the French is really afraid that France might go off the gold standard, and it would, therefore, sell francs even at higher rates, than 90. There is ground for this view. Other gold currencies are believed to be under suspicion. The Swiss franc, the Dutch guilder and the Belgian franc was all the subjct of animated discussion among bear speculators. But, none of these currencies would go off gold before the French franc. Another indication of possible future fortunes of the franc is given in the widening margin of discount on the sales of forward francs. These sales of francs forward were mainly by holders of gold and gold-mining shares. These sales have assumed such proportions that sellers of forward francs occasionally find it hard to find a bank to carry out their orders.

As regards the doubts entertained regarding the Swiss franc it is based on the banking situation in Switzerland. Besides the *Banque Populaire*, another bank is also believed to be in a vulnerable position.

INDIAN WORKMEN'S COMPENSATION AMENDMENT ACT

Radical changes in the working, operation and application of the Indian Workmen's Compensation Act of 1923 have been made by the Workmen's Compensation Amendment Bill which has recently been passed by the Indian Legislative Assembly and the Council of State. The new Act which will come into force from 1st January, 1934 is much more liberal and contains among others the following important changes. Many new classes of employees come for the first time under the scope of the Act ; changes have been introduced in the underlying principles and procedure for dealing with the claims ; the scales of compensation payable have been thoroughly revised ; the financial obligations of the employer have been increased ; and the waiting period has been shortened.

The New Act has made the subject of Workmen's Compensation important to almost all classes of employers, while formerly very few came within its scope. Among those included in the amended Act are persons employed in the smaller factories even if they contain no machinery ; all employees, except those in a clerical capacity, on any estate planting tea or coffee, or rubber, or cinchona and on which at least 25 persons are employed ; persons employed in connection with the operation or maintenance of all mechanically-propelled vehicles, including drivers of private motor cars ; persons employed in the handling of transport within the limits of any port of goods which have been discharged from or are to be loaded into any vessel ; persons employed in the construction, repair or demolition of dams or embankments of at least twenty feet in height ; persons employed in the making of any excavation on which at least 50 persons are employed ; masters and seamen of all ships propelled by some form of mechanical power ; persons employed in the operation of any ferry boat capable of carrying more than ten persons ; and all persons employed in both producing and exhibiting to the public cinematograph pictures. There can be no doubt that the Amended Act has advanced to a great extent in this respect and has removed much of the long felt injustice. It is a significant change that though India is not an essentially industrial or manufacturing country, yet a large fraction of its huge population have now come to enjoy the benefits conferred by the Workmen's Compensation Act. This was recognised and applied in India much later than in most of the western countries. The existing Act did not cover many of the employees (particularly the employees of small factories where no machinery was used and the employees of the numerous tea, coffee, rubber, and cinchona estates) who badly needed protection under the Act. They are estimated to total nearly two million, who will as a result of the Amendment Act come under the scope of the Workmen's Compensation Act.

The new Act has also increased considerably the compensation payable by the employers to the employees in case of accidents. The following tabular statement shows in the second column the amount payable in case of death of the employee for the various monthly wages shown in the first column, the third column showing the amount payable for total permanent disablement, while the last column shows the fortnightly allowance payable for temporary disablement so long as the disablement continues.

Monthly Wages Rs.		Death Benefits Rs.	Total disablement Benefits Rs.	Temporary disablement allowance (fornightly) Rs. As.
10	...	500	700	Half the monthly wages
15	...	550	750	5-0
18	...	600	840	6-0
21	...	630	882	7-0
24	...	720	1,008	8-0
27	...	810	1,134	8-8
30	...	900	1,260	9-0
35	...	1,050	1,470	9-8
40	...	1,200	1,680	10-0
45	...	1,350	1,890	11-4
50	...	1,500	2,100	12 8
60	...	1,800	2,520	15-0
70	...	2,100	2,940	17-8
80	...	2,400	3,360	20-0
100	...	3,000	4,200	25-0
200	...	3,500	4,900	30-0
Above 200	...	4,000	5,600	30-0

Employees drawing wage midway between two scales will be entitled to the compensation shown for the next higher scale of wages. For permanent partial disablement the benefits will be a percentage, of the amounts shown in the third column, proportionate to the extent of disablement. In case of minors the compensation allowed in case of death is Rs. 200, in case of permanent total disablement is Rs. 1,200, and incase of permanent partial disablement is a percentage of Rs. 1,200.

Another advantage to all the employees coming under the Act is that the waiting period before the expiry of which temporary diablement allowance will not be payable, has been reduced to seven days. The employers are, for the first time, required to report all accidents to the Commissioner and to send returns of compensations paid by them periodically, the penalty for non-compliance being a fine of Rs. 100. The employers are not liable in case of injuries fatal or otherwise, suffered by workers outside of their scheduled work or employment. However the employers are not, under the new provisions, allowed to set up defences like wilful disregard of standing rules and safety guards on the part of employees or the drink and drug habits of the employers etc. This will, indeed, minimise the hardships caused so far to the dependants of disabled workmen.

Under the new Act almost every employer comes within its scope, and the liabilities of the employers particularly that of the small employers, have been increased. Even a single accident to a small employer will upset his business, if he has not covered the liability. So it is all the more essential that all the employers, big and small, should cover their liability under this Act with Insurance companies. Another advantage in entrusting the Insurance Companies with this liability is that they do their work systematically and regularly, assess the correct compensation, facilitate the settlement of claims without much expense and trouble to the employers, submit accurate returns to the Commissioner on behalf of the employer, and sometimes help the employees and their dependents by grant of ex-gratia payments (That is payments made in cases where there is a doubt regarding the legal obligation to pay and in cases where there is definitely no legal obligation to pay). Such splendid service by the insurance companies to the employers in return for the comparatively very low premiums is only possible on the principle of average. In western countries employers, big and small have taken full advantage of this important branch of insurance. It

is to be hoped that employers in India will not fail to resort to the Insurance Companies for help in the discharge of their liabilities to their employees and their dependants. It is a pity that very few Indian Insurance Companies transact this class of business. Perhaps, it is due to the fact that much of this business has not so far been done in India. It may be hoped, however, that more and more Indian companies will begin to transact Workmen's Compensation insurance as more and more Indian employers resort to this type of insurance.

* * *

We have received the 1933-34 edition of the "Insurance Tables" published annually by Messrs. Stone & Cox Ltd. of London. This little red book needs no introduction to the Indian Insurance world Messrs. Stone & Cox are doing great service to the cause of insurance education in general by their numerous publications of life, fire, marine and accident insurance books and by the publication of a few insurance journals such as "Policy", "Insurance Mail", and the "National Insurance Gazette." The "Insurance Tables" is published in three different editions namely the British edition giving statistical data of all the companies working in the United Kingdom, the Overseas edition dealing with South African and Australasian companies and the Indian edition dealing with all the life offices working in India.

The booklet commences with a few hints to the agents for selecting a good office such as adequate reserves, steady growth of premium income and new business, a moderate expense ratio, sound investments etc. Then it gives statistical information for nearly 90 life offices, Indian, British and Foreign doing life assurance business in India, arranged alphabetically. This section of the book is the most useful; and valuable information is given for each and every company. The premium rates for whole life, whole life limited payments and endowment assurances of varying terms for ages ranging from 20 to 45 under the with-profit plans are given. All the special features of the company, regarding bonus rates, bonus vesting, extra charges, reduction in charges, instalment premiums, conditions for payment and method of calculation of surrender values, paid-up-policies and loan values, are stated in brief. Then important items in the results of latest annual revenue account and of the latest valuation are given.

The last section of the book consists of a number of comparative tabular statements of premium rates of all the life offices under the without profit scheme for Whole Life, whole life limited payments and endowment assurances and for all the ages between 20 and 50. Then the summary of Revenue accounts of Indian life offices for the latest 5 years giving particulars of income and outgo, are given in an alphabetical order. A similar summary of revenue accounts of Non-Indian offices is also given. Lastly summary of successive valuations of Indian offices and Non-Indian offices giving particulars such as mortality table used, interest rate assumed, percentage of premiums reserved, total sums assured and bonuses, surplus or deficit shown, allocations of surplus to policy-holders and share-holders, rates of bonus declared etc., are given in a neat and comprehensive way. On the whole the book is a neat and natty compilation which will be found very useful by all fieldworkers of life insurance business. It is priced Rs. 2-8-0.

DESHERGER SEAM COAL

(SUDI COLLIERY)

Certified by the Indian Selected Coal Grading Board and by the Government of India Test House, Calcutta.

FORMULÆ:

Moisture	2·07%

BUSINESS RECOVERY IN THE STERLING GROUP

WHY THE RECOVERY?

(Concluded from the last issue)

At the risk of reiteration we may point again to the rather more favourable experience in the sterling group than in the rest of the world, a comparison which indicates the possession of "a little something that some others haven't got". Why, it may be asked, has the recovery been more steady and pronounced in this group? The apostles of monetary orthodoxy will answer that the chief reason is the maintenance of comparative stability of exchange rates within the group. This is true up to a point, but it is a superficial reply, for it at once raises the further question why comparative exchange stability has been found posible. It has been possible only because trade conditions in the various countries have improved sufficiently to permit avoidance of much more pronounced and less readily controlled exchange depreciation. Thus we are driven still further back in our inquiry. Other people will answer that the reason lies in the Ottawa agreements and the trade agreements with foreign countries within the group, coupled with the setting up of a general tariff system in Great Britain. This doubtless has been a contributory cause of recovery, but it can only account for that part of it which represents the acquisition of a larger share of world trade at a time when the general volume of world trade was shrinking. It can scarcely account for the remaining part of the recovery, which has yielded a net upward movement where these factors alone could not have expected to do more than exempt us from further decline. Where, then, are we to look for the root cause?

In this search a new and ambitious statistical project undertaken by the *Economist* provides valuable guidance. An attempt has there been made to construct, by a combination of various series of figures, a measure of the changes from month to month in the aggregate volume of British economic activity of all kinds. It is a comprehensive index, though it does not, because it cannot, include statistics relating to retail trade and to agriculature ; and it is so designed as to exclude the direct effects of changes in the value of money. It is a measure of pure volume—employmnt, production, trade, and capital construction. Perhaps the most interesting movement in this index, which covers in all nearly fourteen years, is the upward trend of business activity since the closing months of 1931. Indeed, the curve of the three months' moving average shows an almost uninterrupted rise from that time. The monthly figure for October 1931, the lowest point of the slump, was 93.1. the average of 1924 being 100, while the provisional figure for September 1933, the latest available, is 104.9. Thus the volume of business, according to this index, has grown by roughly one-eighth over the past two years. The recovery has not been by any means as pronounced as could be desired, but its scope and steadiness are, to say the least, encouraging.

We draw attention to this new statistical experiment for two reasons: first, because it provides the most comprehensive measure of business activity in this country yet available, so that its results are entitled to special respect; and secondly, because the recent upward trend of the curve is illuminating. If this index is to be relied upon, recovery set in shortly after our departure from gold and has continued ever since. The probability is that the mere departure from gold gave a stimulus to enlarged business activity which was strengthened by the introduction of import duties, and that the momentum thus provided ,and not entirely extinguished by a restrictive monetary policy in the winter of 1931-2, was translated into a steady movement with the inauguration and determined pursuit of an expansive monetary policy. It is true that the expansive policy has been lacking in some respects, but evident that it has borne good fruit even in the limited form in which it has been put into effect. This, then, we can regard as at the heart of the recovery in Great Britain. The stimulus, moreover, has been conveyed to various countries attached to sterling, strengthening the effect of local movements working slowly towards revival. At the rate of progress so far recorded by the *Economist's* index, nearly two years must elapse before the level of business activity attained in 1929 is restored—and the standard even of the relatively prosperous year can hardly be regarded as satisfactory. Nevertheless, freedom of monetary action makes the outlook far more hopeful than it would otherwise be.

The main point which emerges from this survey is that, since our departure from gold, recovery has been steady and has been shared in, one after another, by those countries which, having themselves at different times taken the same step, have participated in the benefits of a monetary policy unhampered by more or less fortuitous bonds. The general averge of commodity prices in the sterling group as a whole is now roughly the same as in September 1931. This, taken by itself, is a disappointing result, since the average at that time was far too low and is still below the level which can be designated as healthy, having regard to debt obligations, internal and international, and budget requiremnts. Yet how much more satisfactory is even this record than that of the gold countries, where prices have fallen by ten to twenty per cent, intensifying their difficulties in many directions. There can be no doubt, in the result, that our departure from gold has paid already a handsome dividend; that in has enabled us to follow a monetary policy well calculated to induce a steady revival of business ; that in consequence it has facilitated recovery over a very large part of the world ; and that its benefits must in course of time extend to every quarter of the globe.

Total Imports and Exports ...	78,01,82,362	73,10,87,207	−4,90,95,155

INDIA'S BALANCE OF TRADE

During the seven months ended October, 1933, the value of the imports decreased, as compared with the corresponding period of 1932, by Rs. 15 crores or 18 per cent. and amounted to Rs. 66 crores and the total exports, including re-exports, rose by Rs. 12 crores or 16 per cent. to Rs. 86 crores. The exports of Indian merchandise showed an increase of Rs. 11 crores or 16 per cent. and the re-exports also showed an increase of Rs. 17 lakhs or 10 per cent. The grand total of imports, exports and re-exports amounted to Rs. 152 crores as against Rs. 155 crores, a decrease of Rs. 3 crores or 2 per cent.

Imports of treasure (private and Government) decreased by Rs. 90 lakhs to Rs. 1,09 lakhs. Gold bullion increased by Rs. 2 lakhs to Rs. 46 lakhs, while sovereigns and other British gold coin decreased by Rs. 9 lakhs to Rs. 17 lakhs, and other coined gold fell by Rs. 8,000 to Rs. 1,47,000. The value of silver imported decreased by Rs. 83 lakhs to Rs. 42 lakhs, while the imports of currency notes rose by Rs. 4,000 to nearly Rs. 3 lakhs.—Exports of treasure increased by Rs. 21 lakhs to Rs. 37,39 lakhs. Exports of gold alone amounted to Rs. 31,60 lakhs as against Rs. 35,34 lakhs in 1932.

India's visible balance of trade in merchandise and treasure during the seven months April to October, 1931, 1932 and 1933 is shown in the following table. The figures are arrived at by combining the balances of transactions in (1) private merchandise and (2) treasure (private account). The balance of remittances of funds is also shown with details at the end of this table.

	Seven months, Apl. to October 1931 Rs. (lakhs)	1932 Rs. (lakhs)	1933 Rs. (lakhs)
Exports of Indian merchandise (private) ...	+88,8	+72,22	+83,64
Re-exports of Foreign merchandise (private) ...	+2,96	+1,74	+1,91
Imports of Foreign merchandise (private) ...	−75,86(*a*)	−80,73(*a*)	−65,94(*a*)
Balance of trade in merchandise (private) ...	+15,28	−6,77	+19,61
Gold (private)* ...	+8,96	+34,63	+30,96
Silver (private)* ...	−1,96	−70	+8
Currency Notes (private) ...	+16	+6	+10
Balance of transactions in treasure (private)* ...	+7,16	+33,99	+31,14
Total visible balance of trade ...	+22,44	+27,22	+50,75
Council Bills, purchases of Sterling and other Government remittances to the United Kingdom(*b*) ...	−29	−18,96	−27,05
Sterling transfers on London sold in India ...	+18,98	...	...
Transfers of Government Securities	−5	−6	+7
Interest Drafts on India in respect of Government of India Securities ...	−22	−22	−22
Balance of remittances of funds	+18,42	−19,24	−27,20

(*a*) Exclusive of the value of Railway materials (Rs. 50 lakhs, Rs. 17 lakhs and Rs. 17 lakhs in the seven months April to October, 1931, 1932 and 1933, respectively), imported direct by State Railways working under Company management which was not paid for in the ordinary way and not, therefore, taken into account in arriving at the balance of trade.

(*b*) This head includes, in addition to Council Bills, (1) Sterling purchases in India and (2) payments in India to Local Bodies, etc., against proceeds of sterling loans floated by them in London and taken over by the Secretary of State.

* These exclude transactions which do not enter into the balance trade.

Shipping.—In the month of October, 1933, there were 249† arrivals and 229‡ sailings with cargoes in and from India, as against 235 and 251 respectively in October, 1932.

The tonnage (net register tonnage) of vessels entered with cargoes at ports in British India from foreign countries and British Possessions during the seven months ended October, 1933, amounted to 4,155,911 and the tonnage (net register tonnage cleared to 4,883,862 as against 3,873,620 tons entered and 4,058,617 tons cleared during the corresponding periods of 1932.

† The provincial details are as follows:—Bengal 18, Bombay 64, Sind 50, Madras 89 and Burma 28.

‡ The provincial details are as follows:—Bengal 32, Bombay 33, Sind 41, Madras 96 and Burma 27.

THE INDIAN REVENUES

The Indian Revenues for the seven months from April to October, 1933, as compared with those of the corresponding period of two previous years totalled:—

	(000's omitted) 1931-32 Rs.	1932-33 Rs.	1933-34 Rs.
Land Revenues ...	16,68,40	14,69,56	16,19,14
Salt ,, ...	3,90,02	6,56,07	4,60,61
Stamps ,, ...	6,60,86	6,91,57	6,86,76
Excise ,, ...	7,86,42	7,72,57	8,02,57
Customs Receipts ...	24,57,51	29,64,08	27,19,25
Income-taxes (including Super-taxes and Excess Profits Duty) ...	6,35,08	7,43,48	6,49,67
Forest Revenues ...	1,42,28	1,40,13	1,30,03
Opium ...	65,28	70,85	59,18

IMPERIAL LIBRARY

The Report on the working of the Imperial Library, Calcutta, for the year 1932-33, begins with expressing the hope that India will have its first Copy-right Library simultaneously with the forthcoming constitutional changes, the scheme for making the Library a copy-right one having made appreciable progress. During the year under notice the total expenditure exceeded the total grant by Rs. 914, due chiefly to excess expenditure on the purchase of books.

The figures relating to the Reading Rooms are interesting study. The number of readers who visited the Reading Rooms and the number of books requisitioned by them from the stack room was 43,448 and 31,886 respectively. The daily average comes to 121 readers and 88 books. Literature continues to be most popular with the reading public, and to an extent that the numberof volumes of the next best subject History is only one-third of literature. Religion has regained its lost position of being third on the list. Botany, of which only 113 volumes were consulted in 1931-32, thus being last on the scale, has all of a sudden made itself so popular that it can with 557 volumes to its credit claim a fairly high position in the list. Its allied science, Zoology, occupies the last position (112 Vols.) with Sports and Games just above it (181 Vols.) The Report emphasises the fact that Calcutta is well-known in the country for its eagerness for all manly sports, and having regard to that fact, it seems strange that the number of volumes consulted in Sports and Games should be lower and lower every year. Numismatics is making itself quite popular, for the number of volumes requisitioned is nearly three times that of last year. Other scientific subjects as Physics, Chemistry, Geology and Mathematics have been all well patronised in preference to Politics, Administration and Biography, etc.

Burma Corporation, Limited—Bawdwin Mine.—

The General Manager reports the following development:—The Meingtha Orebody No. 6 Level has been cross-cut East at 3,206 feet South exposing 15½ feet of ore assaying—Silver per ton, 20 ozs.; Lead, 27.8 per cent.; Zinc 10.5 per cent.; Copper trace.

COMPANY REPORTS

CALCUTTA GAS COMPANY.

The report of the Oriental Gas Co. shows that to 30th June the profit secured was £34,999, against £29,253 a year previous. The quantity of gas sold showed a small increase of 0.6 per cent., but yielded a smaller amount owing to the reduction in the charge to private consumers by 8 annas per thousand cubic feet; the hope, however, being entertained that, as and when the lower tariff attracts more consumers, or increases the consumption of existing consumers, the financial return will be gradually raised. Residuals also brought less, but the setback in these two directions was more than offset by reductions in the cost of manufacture and distribution. In addition to the profit already recorded, there was a profit on exchange of £6,600, while bank and investment interest yielded £1,122, making ,with the brought-in figure of £87,892, a total of £130,625 against £111,892 a year ago. With £110,125 available, after paying the interim dividend and allotting £10,000 to reserve, the Directors recommend a final dividend of 4½ per cent., tax-free, requiring £13,500, and leaving the carry forward at £96,625. Although the dividend at 8 per cent. is nominally unchanged, shareholders are advantaged to the extent that whereas former payments were less tax, the final distribution of 4½ per cent., as already noted, is tax-free. Altogether, a record on which the management, as well as the shareholders, may be congratulated, and constituting ample proof that there is still a profitable market for gas in Calcutta, despite the increasing competition of electricity.

CENTRAL PROVINCES MANGANESE ORE CO.

The Directors are of the opinion that this Company possesses larger financial resources than are required for immediate purposes. In view of this, the shareholders have agreed at a special meeting held on 15th November to reduce the capital from £1,000,000 to £500,000 by returning to shareholders 10s. per share. At 30th June, as the Chairman explained, liquid resources, including investments but not including stocks, showed a surplus over liabilities of £777,580, which has since been added to. There is no immediate capital expenditure in view, either on account of mines equipment or for the purchase of other properties, consequently £500,000 is superfluous. In order, however, to avoid payment of further stamp duty, at any future period, a second resolution was adopted increasing the capital of the Company to its former amount of £1,000,000 by the creation of 1,000,000 new shares of 10s. each; it is, however, understood that the creation of the new shares does not entail their immediate issue.

BRITISH BURMA PETROLEUM CO.

A trading profit of £65,495 was earned by the Company during the period 1932-33 as against £68,456 in 1931-32. The following table summarises the chief fluctuations:—

	1932-33.	11931-32.	1930-31.
	£	£	£
Profit ...	*77,566	*89,731	174,121

To reserve ...	...	...	10,000
Carried forward	1,334	8,518	5,970

† Deficit.

* Including profit on sale of investments, etc., of £37,193 for 1932-33 and £ 53,300 for 1931-32.

‡ Tax free.

The net profit, after meeting Debenture interest, income-tax and depreciation, is down to £34,377 against £44,110, but this is arrived at after crediting £37,193, against £50,950 last year, in respect of profit on sale of investments. Again no dividend is declared. Part of the sinking fund has been utilised to write down certain assets; thus £75,000 has been written off shares in subsidiary companies, £40,000 off interests in associated companies, £31,955 off amounts due from subsidiary companies, and £20,000 off oil wells, plant, etc. The sinking fund now stands at £88,131. Furthermore, the auditors state that no valuation has been produced to them of the Company's interests in subsidiary and associated companies and they are unable to express an opinion as to the value at which they appear in the balance-sheet (£202,031). Losses of subsidiaries have been carried forward in their accounts. Government securities and fixed term policy stand at £426,610 and cash at £40,409. The floating assets largely exceed current liabilities.

Total production shows an increase, due to the deepening of certain wells in Yenangyaung which came into production from a new horizon with a good initial yield. With regard to the future programme, however, the Directors state that world market conditions, combined with high Indian taxation which has virtually removed the protection that the indigenous industry formerly enjoyed in India, continue to handicap operations in Burma, and they have decided that the Company's development programme must be drastically curtailed until conditions improve and again offer a reasonable prospect of a profitable return to justify further expenditure.

In regard to interests outside Burma, development work in Germany has yielded to date a production of 1,700 tons of high quality crude oil but further drilling will be required to prove the value of the properties secured. Investigations into the possibilities of establishing an oil industry in South Africa, based on the extraction of indigenous oil from Shale and torbanite deposits in the Transvaal, have been satisfactory, and rights over extensive areas have been secured. The Union Corporation is participating jointly in further investigations of this business.

CONSOLIDATED TIN MINES OF BURMA, LTD.

Although during the past year the average price of tin was only £157 per ton and wolfram 10s. 9d. per unit the Consolidated Tin Mines of Burma, Ltd., increased its net excess of revenue over expenditure to £13,800, against £4,041 in the year previous, and some improvement in the price of both metals has since occurred; a substantial rise, especially in the price of wolfram, having taken place since 30th June. A satisfactory achievement is the reduction of all-in costs in the past four years from £100 to £63 per ton. In furtherance of their programme of development, the Board have approved a scheme for the erection of a crushing mill and treatment plant at Hermyingyi, together with a hydro-electric plant at Taungpila. It is proposed to centralise milling and separation on a suitable site at the Hermyingyi property, and the removal of the Company's separation plant from Tavoy will be undertaken in the near future.

P. & O. AND B. I.

The Directors of the P. & O. recommend the usual dividend at the rate of 5 per cent. per annum on the Preferred stock, less tax, but regret that they are unable to recommend a dividend on the Deferred stock. It will be recalled that last year, for the first time since the stock was created in 1889, the Deferred stockholders also went dividendless. The total capital is £7,632,518 in £3,040,000 Five Per Cent. Cumulative Preferred and £4,592,518 Deferred stock. For some time prior to 1932 reserves had been drawn upon to maintain dividend payments but that policy, of course, was legitimate only for a short period and could not be prolonged to cover the whole of the long drawn-out crisis to which the world in general, and shipping in particular, now appear to be consigned. Last year the Company earned only a fraction over ¼ per cent. on the Deferred stock, and in the past year nothing has occurred to enable an advance on that figure.

On the contrary, the British India Co., which is controlled by the P. & O., has also this year entered the no-dividend list, so far as Ordinary shareholders are concerned, the first time in 77 years in which it has been forced into that position. A year ago it was able to distribute 2½ per cent. tax-free on the Ordinary but this year its announcement is limited to a dividend on the Five Cent. Cumulative Preference stock for the half-year ended 30th September, at the rate of 2½ per cent. payable, less tax, on 14th December, and 2¾ per cent. on the Five and a Half Per Cent. Cumulative Preference stock for the half-year ending 31st December, payable, less tax, on 1st January. During the eleven years ending 1930-31 the B. I. maintained its 8 per cent. dividend, free of tax, without a break, and its earlier record was, of course, still better, but less prosperous days have dawned, and it needs more than human foresight to determine when, if ever, the former volume of trade and traffic will return.

BENGAL DOOARS RAILWAY CO., LD.

Extracts from Director's Report:

After declining for two successive years, a small improvement in earnings is reported for the year ended 31st March, Gross earnings rose by Rs. 47,703, compared with 1931-32 to Rs. 19,48,087, and working expenses rose by Rs. 37,121 to Rs. 11,22,294, the net earnings, therefore, at Rs. 8,25,793, being Rs. 10,582 higher. Converted into sterling, less India taxation, net earnings amount to £54,609 (against £48,189), excluding interest receipts of £1,902 (against £1,660). After reserving £3,000 (against £2,000) for income-tax, and providing for the Preference dividend, the Directors have placed £11,000, including the £5,000 transferred as per the interim report, to reserve (against £10,000 for 1931-32), bringing that fund up to £335,090. They now propose to pay a final dividend of 4 per cent. on the Ordinary stock, making 7 per cent. for the year (unchanged), leaving the balance forward a few hundred pounds higher at £53,706.

WORLD OF INDIAN FINANCE

Calcutta, December, 15.

Money was distinctly in better demand during the week than during the earlier weeks. The operations of the Government in respect of Treasury Bills have appreciably added to the squeeze. On the one hand, the payments on account of sterling purchases have been on the small scale ; and on the other, in addition to the usual weekly sales of Rs. 2½ crores, the Government had been able during the period March 6 to 11 to effect sales of intermediates for Rs. 112 lakhs. As we pointed out last week, one is at a loss to know when the bulk of the sales at the tap rate were effected. Considering the sharp increase in money rates during the week, it is reasonable to infer that the greater part of the amount of Rs. 112 lakhs was taken by the market towards the close of last week. One might, therefore, say that the net results of Treasury Bills operations during the week had been to create an increase of Rs. 13¾ lakhs in the total of Treasury Bills outstanding and to effect a corresponding decrease in the resources available to the market. It will not be known till Tuesday evening what are the results of the sales of intermediates during the present week. It is quite possible that, owing to the prevailing stringency in the money market, sales of intermediates during this week have shown an appreciable fall since the last. Even at that, there should have been no net inflow of funds into the market on account of Treasury Bills.

This raises the question whether it would not be premature to regard the Treasury Bills rates of last week and this as having come to stay. The indications are that the average rate of Rs. 2-8 per cent. on the tended day and Rs. 2-7 per cent. for intermediates will not be found in the ensuing weeks to possess any degree of stability. Taking the amounts tendered on the various auctions of the month, one finds that there has been a steady fall from Rs. 497 lakhs to Rs. 472 lakhs and thence to Rs. 327 lakhs in the week under review. Likewise, sales at the tap rate for the two weeks, for which the figures are now available, have fallen from Rs. 198 lakhs to Rs. 112 lakhs. Add to this the increase in money rates, which occurred during this period, it seems quite possible that the Government would be forced at the next auction to improve upon the present rate. This is not to say that the Government have not done well to attempt to steady the discount rates on Treasury Bills. The progressive increase in the rates has gone over far too lengthy a period ; and it is necessary that the impression should not be allowed to gain ground that the discount rates can be shaped like clay in the hands of the investors. However, considering the facts adduced above, it seems expedient for the Government to show themselves to be a little accommodating ; and speaking objectively, it is quite on the cards that next week's auction will show a small improvement on the rates available for the market.

Contrary to expectations which one might entertain on the basis of monetary conditions during the week, giltedge was steadier than it ever was before for some time past. It is true that the closing quotation of 3½ per cent. paper this evening was Rs. 81-5 which is an anna lower than the opening quotation for Saturday last. But it should not be forgotten that Paper touched as high as Rs. 81-10 at one time, which suggests that the recession, which has come about since, is due, probably, to profit-taking on the part of weak operators. By far the most heartening feature of the giltedge market today is the steady improvement which 3½ per cent. 1947-50 has made. As is well known, this scrip has had a record of continued mishaps ; and it is comforting to find that at long last it shows signs of coming into its own. It is still on the upward trend and has at one time touched what sometime ago would have seemed the impossible rate of Rs. 94. The support, that has now emerged for the 3½ per cent. 1947-50 is somewhat fortuitous, in as much as trust firms and insurance companies, which have always shown a preference for 4 per cent. 1960-70, have of late been obliged to turn their affections to 3½ per cent. 1947-50, owing to the comparative scarcity of the former scrip. A week ago there was a tendency for the liquidation of short-term loans ; but the revival of investment demand has counteracted it, with the result that the contrary tendency has now come to prevail.

It is necessary, however, not to let the developments of the immediate past to obsess our minds or

to cloud our vision of the future. It should not be forgotten that even at present the amount of business passing is not much and that the improvement is also confined to the general sentiment towards Government securities. How long such improved sentiment will persist, it is assuredly difficult to prophecy.. That money is in better demand and the Imperial Bank's cash balance shows an unmistakable tendency towards shrinkage is a circumstance which suggests that operators in giltedge ought not to make the mistake of taking too rosy a view of the future. Against this, however, is to be set the prospect of the market receiving Rs. 7½ crores of maturities of Treasury Bills. It is a question how much of this amount the Government will succeed in roping in again by way of new sales. If the view is taken that not all amount is sure of getting back into the coffers of the Treasury, and that the market would ultimately have an excess of maturities over sales, to that extent it should be possible for the giltedge market to retain in a large measure the improvement of recent weeks. In any case, it seems safe to suggest that no serious or marked changes in giltedge prices will occur before the end of the year. Banks and firms who hold Government securities should naturally be interested in seeing that prices at the close of the half-year are maintained at as high levels as possible.. Any attempt at unloading securities at this juncture will only be an ill-wind that blows nobody any good.

The better demand for money is reflected in the firm tone of the exchange market. Though the total amount tendered at the last sterling auction was only £120,000 much less than one might have expected, it may be remarked that the interbank business reported during the week was better than during the previous week. With gold still accumulating in Bombay, the prospects of the rupee-rate are distinctly brighter. So far as the fears about the Government being obliged to make a change, the report of the Associated Press correspondent regarding the possibility of a compromise on the ratio question had no effect on the Calcutta market.. For the time being, the inspired contradiction of the message had a further reassuring effect. The Bombay market is reported to have evinced a temporary ease on receipt of the information but it seems to have regained normal conditions soon after.

The closing rates are: 1s. 6 1/32d., T. T. to the end of December; 1s. 6d., January T. T.; 1s. 5 31/32d., February T. T.; 1s. 5 15/16d., March T. T.; 1s. 5 29/32d., April-May T. T.; 1s. 5 7/8d., Monsoon months T. T.

Bills may be quoted: 1s. 6 1/8d., this month; 1s. 6 3/32d., January-February and 1s. 6 1/16d., March-April.

Money was tight during the week with call quoting from 3 to 3½ per cent. Onemonth and twomonth deposits quoted 1½ per cent. and threemonth deposits 1¾ per cent.

(Continued from page 1447)

As for France, there can be no doubt that the situation which has ruled since the initiation of the American gold purchase policy has been extremely uncomfortable to her. That policy has coincided with the formulation of the French budget disclosing a colossal deficit of 6 milliard francs and frequent changes in the French Cabinet not one of them improving the chances of the country producing a balanced budget. The two circumstances have combined to bring about a flow of funds from France and to accentuate all over the world the fear of France abandoning the gold standard and effecting a devaluation of the franc. The gold reserve of the Bank of France contracted during the five weeks ended December 1st by £44.2 million. It is noteworthy that the authorities have been taking care to see that the reserve ratio does not fall as a result of the efflux of gold. In fact, the proportion of gold specie to sight liabilities is 79.24 per cent. compared with 79.14 per cent. of the previous return. Such a result can be secured only by a heavy contraction in current deposit account. That France is not fighting shy of the contraction necessitated by the outflow of gold is an indication that her deflationary tendencies have not been weakened by the recent developments. In such a situation it is difficult to see how the talks of stabilisation can be begun, not to speak of being brought to a successful end.

FINANCE ABROAD

	Sterling dollar rate	Sterling franc rate	London price of gold
December 7 ...	5.10⅜	83.40	126s. 0d.
December 8 ...	5.13⅛	83.53	126s. 9d.
December 9 ...	5.15½	83.71	126s. 6d.
December 11 ...	5.08⅜	83.37	127s. 0d.
December 12 ...	5.07⅞	83.59	126s. 4½d.
December 13 ...	5.03¼	83.90	126s. 1d.

Another week of comparative steadiness in the international exchange. This may be attributed primarily to the continuance of the official price of gold in America at the same unchanged rate at 34.01 dollars. The sterling-dollar rate has fluctuated within a range of 10 points and the sterling-franc rate has gone up by slow degrees from 83.40 to 83.90. The price of gold in the London market which has risen by 1d. during the period covered in the table at the head of this article, in spite of the increasing sterling-franc rate shows that the premium on gold in London has been on the increase. In fact, on December 11, when the sterling franc rate stood at 83.37 the London price of gold went up to 127s. But these differences notwithstanding, the freedom from violent oscillations in the international exchanges is appreciable and has given rise to much speculation regarding the possibility of efforts towards stabilisation of exchanges. Much has been made of the reference of Mr. Bingham, the American Ambassador in London, towards an Exchange Equalisation Fund in America. Though Mr. Bingham's statement has been controverted from America, it is significant that Mr. Bingham has not withdrawn his statement or issued any correction or modification. It is possible that there have been technical inaccuracies or misconceptions both in the original statement and the contradiction which followed. But both alike point to the existence of some machinery which is in the process of being devised for the stabilisation of exchanges, or their manipulation according to a preconceived policy. There can be no doubt that the unchanged gold price in America and the stability of the cross rate are not a merely fortuitous circumstance but have been deliberately worked for by the authorities in America.

One obvious explanation is that the American Government have to put through large new loan programme at the end of the year and that the spectacle of an increasing dollar price of gold and the threat of inflation, which it would betoken, would jeopardise the chances of success. And one would be justified in dismissing suggestions of impending agreement but for other circumstances which lend increasing colour to it. News about America these days are distressingly conflicting and inadequate. And one is inclined to think that not only the statements of leaders in that country are conflicting by themselves, but there is also the tendency to push inconspicuous developments into prominence. We have had of late far too much of the changes in the personnel of the American Administration. It would have been well if the reasons for such changes as have been brought about could be clearly stated. For instance in the case of Mr. Woodin, it is not yet clear whether he is under temporary absence or has left the Treasury for good, and whether the absence is due to reasons of health or differences of opinion with his chief. During the period under review, we have had fulsome details about changes in the internal revenue bureau which is under Mr. Morgenthau, Secretary of the Treasury. The only development of importance which may be deduced from these is that all the recovery codes including, the agricultural, will be handed over to General Johnson.

To return to the question of the negotiations of stabilisation, it is reported on the one hand, that the Acting Secretary of the Treasury declares that the Administration is adhering to its policy which is generally understood to be one of increasing depreciation accompanied by instability—and if such a move is made he would know it. On the other hand, it is asserted that conversations have been conducted by the Federal Reserve Bank of New York with the Bank of England and the Bank of France. And the only manner in which the conflict between the two statements can be resolved is by emphasising that the Federal Reserve Bank is a quasi-private institution and that such efforts as the Bank might have made in this regard could not be regarded as marking a change in official policy.

The attempt to obtain a clue to future developments from the news reports and from the statements of government and bank officials in the leading countries may be abandoned as wellnigh impracticable. The real question would always be: What is the incentive of each of the three principal nations to seek, or arrive at, a stabilisation agreement. So far as America is concerned, an immediate incentive may be said to have been provided by the failure of the gold purchase policy. It was announced by Mr. Jesse Jones, the head of the Reconstruction Finance Corporation, that domestic purchases of gold totalled 334,000 ounces valued at 11,350,000 dollars; but he also added that foreign purchases were hardly enough to "make good the bridge-work of false teeth." It was said that before the announcement of the gold purchase policy was first made, America would not be able to command balances abroad sufficient to effect gold purchases that would affect the position of the gold standard countries. London has all along provided the world's magnet for gold, so to say, and the premium that has been available in that market and the attraction of sterling as a currency, in which balances could be safely held, have been an effective hindrance to America making large scale purchases of gold abroad. It is quite believable that Mr. Roosevelt has come to regard the gold purchase policy as one that might before long outlive its usefulness. At the level of 6 dollars to the pound there will be scope for inflation of American currency sufficient to provide additional credits and currency for the programme of revival. It was only the other day that General Johnson claimed on behalf of President Roosevelt that he has saved America from printing press inflation. With the meeting of Congress in January there can be no doubt that pressure of inflationists on the Administration would be increased tenfold especillay as Senator Thomas has given notice of a bill embodying provisions for drastic inflation. Though the attitude of the bankers in the third quarter of the year 1933 forced Mr. Roosevelt more and more towards inflation, he might still be supposed to be anxious to avoid inflation in its worst form. And the best way of checking the inflationist agitation is to confront Congress with the *fait accompli* of a stabilisation agreement.

But there are reasons to think that, just when, on the above analysis, the United States may be supposed to be less disinclined towards stabilisation, Great Britain and France are somewhat lukewarm to it. An important item of news during the week contains the suggestion that Great Britain is very hesitant in the matter of consulting the French and the American Governments on the question of stabilisation. Firstly because there is the necessity of consulting the French Government whose attitude is not clear. Secondly, London has rendered its own position far less invulnerable by becoming the ready refuge of scared moneys abroad. It is a question whether with stabilisation there would not be a rapid homeward movement of American funds which came to London during the period of the flight from the dollar. Thirdly, there can be no guarantee that inflationists in America are not more powerful than they are generally supposed to be now, and that stabilisation will not rouse them to a pitch of indignation and induce them to upset it at a later stage.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering :—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,

COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 2½ crores of three months Tresury Bills were opened on Tuesday, December 12. The total amount offered was Rs. 3,27, 50,000. Tenders at Rs. 99-6-3 were accepted in full and those at Rs. 99-6 were allotted approximately 93 per cent. Lower tenders were rejected. The total amount accepted was Rs. 2½ crores, the average rate of accepted tenders being Rs. 2-8 per annum.

Tenders for Rs. 2½ crores of three months Treasury Bills will be received on Tuesday, December 19. Successful tenderers should make payment on Friday, December 22. Other conditions are as usual.

Three months intermediates will be sold from December 13 to 18 at Rs. 99-6-3 per cent. subject to the conditions previously announced.

Three months intermediates sold from December 6 to 11, amounted to Rs. 1,12,00,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, December 13, tenders to the amount of £120,000 at 1s. 6 1/16d. were received and allotted in full.

On Wednesday, December 20, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 30th November, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	2,148
British Treasury Bills	14,590,185
Other British and Dominion Government Securities	14,790,333
Gold.—In England	2,152,334
In India	8,465,000
Total ...	40,000,000

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

December, 14.

Since reporting last week slightly better conditions have prevailed on the Calcutta Stock Exchange. There were more buyers in evidence as compared to the previous week. Selling pressure was much less. Values in almost all the sections have ruled from unchanged to steady, day to-day fluctuations being confined to small limits 3½% paper after declining to below Rs. 81 have again steadied up with more buyers at declines. Values have therefore again firmed up to Rs. 81-8. There was more enquiry for 3½% new loan and business was done upto Rs. 94-4. Similarly there were buyers of 1960-70 4% loan at Rs. 98-4. 6½% Bonds were also well enquired for and business was done up to Rs. 105. The tone towards the close was dicidedly better.

Jute shares were very irregular throughout the week going up and down in sympathy with the hessians market. Early in the week they were easy, Howrahs being dealt at Rs. 47 later on improving to little over Rs. 48 closed again easy near about Rs. 47-10. Kamarhattys however remained fully steady closing at Rs. 493 Nationals were done up to Rs. 20-8 and Clive at Rs. 23-12.

Very little interest was shown in Coal shares though values were well maintained. Burrakurs were dealt in at Rs. 15 New Beerbhoom at Rs. 13-4 and Union at Rs. 10-4. Towards the close news about the restrictions plan being received that the three Coal Mining Associations have come to a common agreement the tone was steady with more interest being displayed.

As anticipated last week Tea shares had comparatively better enquiry this week, and values were in appreciation over the previous week—Baradighi were dealt upto Rs. 52. Jayabirpara to Rs. 22-4. Huldibari were a good feature at Rs. 28-8. Patrakola changed hands at Rs. 920. Golepur kept steady at Rs. 8-4 while Bateli were on offer at Rs. 6-4. Towards the close there were more sellers than buyers. However Teas selected scrips must see a better market in near future.

Sugars have continued quiet champaran daving been dealt at Rs. 22-4 and Samastipur at Rs. 12-12. Cawnpores were on after at Rs. 30. Carew & Co were done at Rs. 15.

Cottons were easy Bengal Nagpore declining to Rs. 16-10 and Kesoram to Rs. 3.

Titagurh paper showed improvement ordinaries changing hand at Rs. 15 and deffereds at Rs. 6.

Electric shares were also a shade quieter and business in this section was very small.

Indian Iron & Steel were weak at Rs. 4-4 and Bengal Iron at Rs. 3.

MADRAS STOCK EXCHANGE

(By Wire.)

(From Our Correspondent)

Madras, December, 14.

The securities market firmed up gradually during the week under review. The acceptance of Treasury Bills at under Rs. 2-8 proved a stimulus to the market and there was considerable short covering in the speculative and medium-dated securties lifting up paper to Rs. 81-3 and 1960-70 loan to Rs. 98-4. A good investment enquiry was forthcoming for 3½ per cent. 1947-50 loan and 5 per cent. medium-dated issues which improved by over annas 8. Amongst the short-dated bonds, 4½ per cent. 1934 were well absorbed at Rs. 101 and Treasury Bonds at Rs. 105-3 except 5 per cent. 1934-55 loan which was neglected and had good sellers at Rs. 113-8. The terms of the New Conversion Loan for the conversion of the 6¾, 6½ and 5½ per cent. short-dated bonds were made known on Monday, and this week holders were invited to convert into 4 per cent. 1953-63 loan at par with certain cash bonuses allowing for the difference in the market price. The difference in the yield between the new and the old issues is not more than about annas 3 per cent. It is considered that both the cash bonds offered and the difference in the interest between the present securities and the New Loan are not sufficient to attract it.

The new Cochin Loan met with business at Rs. 103 with sellers over. Amongst fixed interest securities was the Madras Corporation debentures which were wanted on a 4¾ per cent. yield basis with more offering. United Nilgiris Tea debentures had buyers at Rs. 101 and Rajamundry Electrics at Rs. 105 without any business resulting. The Preference share market was very lively, Buckinghams and Carnatics were taken up at Rs. 137 with further buyers whilst Vasanta preference were taken up at Rs. 103, Spencer B preference after being taken up at Rs. 10-12 attracted further sellers at this rate, Tata second preference were a dull counter at Rs. 101-8. Bank shares were weak with sellers in almost every scrip. The State Aided Banks were offered in large quantities without interesting buyers. Electric shares were steadier with a good enquriy for Benares at Rs. 12, Rangoons at Rs. 23-4 and Vellores at Rs. 9-12. There was an appreciable scarcity of stock which accounted for the small turnover. Mill shares were quiet with Buckinghams done at Rs. 183 and Coimbatores at Rs. 50. Cement shares were a bright feature and appreciated considerably. Indian cements moved up nearly 20 points since we last reported whilst Katnis and Shahabads 15 points in addition to considerable business; in these Punjabs attracted attention at about Rs. 14. Sugar shares fell further. East India Distilleries were marked down to 25, India sugars and refineries, a recent floatation was sold down to Re. 1 discount but recovered at the close to about 4 discount. The Rubber market was lifeless and Teas were firm and advanced considerably. A large line of Highland produce shares changed hands at Rs. 13 cum dividend but, subsequently, improved to Rs. 13-8 cum dividend with buyers over. Peermandes were transacted at Rs. 21 and later at Rs. 22 with more buyers at this price. Both Peria Karamalais and United Nilgiris Teas Jumped from Rs. 31-8 to Rs. 34 and Rs. 88 to Rs. 94 cum dividend. The miscellaneous section was featureless except for deals in sterling oils at the low prices recently touched.

JUTE AND JUTE GOODS

JUTE

The market has ruled idle and featureless throughout the week, the actual business passing being very small. Values have been steady in sympathy with the hessians market and on reports of smaller imports but so far no interest is shown either by mills or by shippers at advanced rates. There are sellers for Indian Jat at Rs. 3-10 and Rs. 4-2, ready pucca bales at Rs. 24 but not getting on.

Futures have ruled very steady, though the fluctuations are not wide. December liquidation has been absorbed by long hedges and there are more buyers in evidence for may futures. In the immediate future there is not much chance for any appreciable rise but on the whole in the long run the market is more inclined for a rise than a fall.

JUTE MANUFACTURES

During the current week the market has ruled fully steady with a sharp advance in the price of hessians. There has been a good buying interest at every decline and the market has ruled fully steady. During the middle of the week on reports of increase of stocks and decrease in consumption in U.S.A. during the month of November, each by 10 million yards there was a short break on Wednesday morning when hessian futures touched Rs. 9 but on general buying values again steadied up to Rs. 9-4 At the time of writing the tone of the market is fully steady.

Heavy goods have however shown no strength, but remained idle throughout the week. Mills have sold fairly large quantities of hessians during the week but the market has well absorbed the sales.

COTTON AND COTTON GOODS

COTTON

During the week under review the market has ruled steady with a fair amount of covering business passing. Values for April-May Broach have gone up from Rs. 174 to Rs. 185. The Indo-Japanese settlement is still under consideration and even if it concludes in the near future, as expected, it is doubtful if it will materially help the Cotton situation this season. Japanese purchases of American Cotton have been very heavy and the boycott of Indian Cotton continues. The present rise is due to better American sentiment and a rise in New York values.

The only important feature of the past week has been the publication of the final Bureau report, in which the Washington Department of Agriculture indicates a probable production of 13,177,000 equivalent 500 lb. bales, exclusive of linters. Although this figure is somewhat more than private forecasts issued beforehand, which had led traders to expect, it had no noticeable influence in the local market. The total production of cotton ginned for the crop of 1932 was 12,994,430 bales; 17,095,594 bales in 1931; 13,931,597 bales in 1930; 14,824,861 bales in 1929 and 14,477,974 in 1928; the average production for the five years being 14,664,871 bales.

American cotton of the growth of 1933 ginned prior to December 1st, totalled 12,108,000 running bales, counting round as half bales, the Bureau of the Census, Department of Commerce, announced to-day in its ninth ginning report of the season.

This compare with 11,636,958 bales last year, 15,018,403 in 1931 and 12,837,099 bales in 1930.

The next report will be issued on December 20.

Acreage harvested 30,144,000 acres; Acreage abandoned 26.4 per cent.

The tone of the market at the time of writing is fully steady.

PIECEGOODS

Calcutta, Dec. 14, 1933.

Dull conditions have prevailed in the piecegoods market in Calcutta during the week under review. Business in spot as well as forward positions has been very small. Winter sales being over and summer requirements still to be purchased there was naturally very little movement in spot goods. Cold weather stocks have been cheaper than the previous season but the demand has fallen short of expectations. Consequently the stocks in Rugs, Meltons, Coatings and Blankets left on hand are comparatively larger, and it is difficult to have them cleared during the season.

Pending the Indo-Japanese negotiations business in cotton goods has been very very restricted. Offers made by buyers have been based on very cautious and conservative calculations, manufacturers in Lancashire have not been able to accept them but in few instances, their limits being rather high. So far Japan is concerned it would not be incorrect to say that there has been no fresh business for several months past. Indian mills had no better luck and business with them too has been on a very restricted scale, being in the nature of replacements only. The Indo-Japanese talks seem to be nearing settlement and withh hot weather requirements to be booked it appears that better business will result in near future.

IMPORTS

There has been a persistent drop in the Japanese cloth in Calcutta since the raising of imports duty. The total number of packages imported from January 1 to November 30, 1933 has been from Japan 1,26,629 from U. K. 59,296 and from Indian Ports 1,58,537 as against 1,63,507, packages, 53,485 and 2,26,204 packages during the same period in 1932 from the three places respectively. It shows that there has been lesser imports in Calcutta during these eleven months by about 68,000 packages from Indian ports and 37,000 packages from Japan, while the imports from U. K. has gone up during the same period by 6,000 packages. The following are the monthly figures from June to November 1933 which clearly shows the fall in imports from Japan and rise from U. K. :—

	From Great Britain Pkgs.	From Japan Pkgs.
June	2,994	15,382
July	3,211	15,592
August	5,688	19,531
September	3,877	8,220
October	6,823	6,071
November	4,537	3,306

YARN

Unchanged conditions have remained in this section due to season lack of demand, but the undertone of the better is likely to come in and in view of the stocks not demand market has remained quite steady. Next month being heavy and controlled by a few strong hands values are likely to appreciate rather than decine.

BULLION

GOLD

Calcutta Dec. 16, 1933.

Gold: The market was weak during the week under review and values have declined from last week's level from Rs. 31-11 to Rs. 31-4. Sovereigns for the same reason have declined from Rs. 20-2 to Rs. 19-15.

London quotations have gone down from £6-6-11 to £6-6-1. There has not been much business in the market. Demand for home consumption is poor. Stocks continue to remain very high as reported last week.

LONDON (Air-Mail Week)

Gold reserve against notes of the Bank of England was £190,538,434 on the 22nd November comparing with £190,538,388 on the previous Wednesday.

The Bank's purchases of bar gold amounted to £99,938. In the open market a large supply of gold continued to be available and the Continental purchasers absorbed it, destinations, however, being undisclosed. The keenness of demand resulted in maintaining a premium over the franc parity, with wide variatons.

The following were the United Kingdom Imports and Exports of gold registered from mid-day on the 20th ult. to mid-day on the 27th ult.

SILVER

Calcutta, 16th December.

The market has been very weak on heavy bull selling. There has been a drop from last week's prices from Rs. 55-14 to Rs. 55. Towards the close there has been a slight recovery and the closing quotation has been Rs. 55-6. The highest and lowest touched during the week was Rs. 56 and Rs. 54-14 respectively. A corresponding drop has not taken place either in London or in Shanghai. The weakness originated in the Indian market due to the approach of December settlements and on the rumours of the removal of the surcharge on the import duty on silver. But so far, there has been no confirmation to this effect. Stocks continue to remain very heavy and the offtake is very poor.

LONDON (Air Mail Week)

There was no special feature in the market during the week under review. A quietly steady tone was maintained and prices showed small day-to-day fluctuations. China gave some support, as against moderate offerings from the Continent and re-sales by the Indian bazaars. The latter, however, was inclined to buy at the lower rates.

America operated both ways in the afternoons, but the uncertainty of the dollar exchange and its wide fluctuations made business rather difficult.

The following were the United Kingdom Imports and Exports of Silver registered from mid-day on the 20th ult. to mid-day on the 27th ult.:—

TEA

Sale No. 26 was held on December 11 and 12. The selection on offer showed seasonal improvement in liquor while the appearance of dry leaf was inferior. All grades experienced a strong and advancing market. Common and low medium brokens were from 3 to 6 pies dearer, leaf grades of the same kind was steady to 3 pies per lb. higher than at the previous sale. Enquiry for internal consumption was general and except for Orange Pekoes and Pekoes which declined by about 3 pies per lb., there was again a good demand. The values for broken grades advanced from As. 3-6 and As. 3-9 to As. 3-9 and As. 4 and style and tippy teas were keenly competed for. Dusts met with a strong demand and prices advanced to fully 3 pies per lb.

The following are the full particulars of sale No. 26.

Teas with Export Rights

	1933.	1932.	1931.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

BRITISH STEEL PRODUCERS BEFORE THE TARIFF BOARD

We have in the past few months deliberately refrained from commenting on the issues connected with the present Tariff Board enquiry into the question of renewing protection for the Indian iron and steel industry. The temptations for dealing with them has been none too weak. There has, in the first place, been, in this instance, as later in the ratio, an erosion of provincialism which it is up to us to endeavour to check. But considering the formidably technical nature of the question of costs in a heavy industry like iron and steel, and considering also that the question is at the moment subjudice, so to say, we have thought it best to postpone an examination of these problems. We are sure, that even the most careful enquiries on the part of outsiders would not enable them to determine how far circumstances were adverse to the success of the efforts of the Indian Iron and Steel Company to outgrow the need for protection; and how far the Company itself is responsible for the failure thereof. The recommendations of the Tariff Board would also have to be based on an estimate of the conditions that might emerge in the future. In all these matters, private enquiries cannot be expected to afford much help. The crucial question of comparative costs and fair selling price can be tackled only by the Tariff Board; and it is only on the basis of facts and figures supplied by the Board, that any lead can be given to the Legislature before it assembles to make its ultimate decision. As for the general principles of policy, they have been laid down in a very satisfactory manner by the Fiscal Commission and have been followed quite loyally in the numerous conferences.

* * *

But the memorandum submitted by the National Federation of Iron and Steel Manufacturers of Great Britain to the Indian Tariff Board raises issues of a general nature which, it is highly necessary, the Indian public should be made cognisant of. We are not aware of any previous instance of British Industrial interests making representations on their own behalf before the Tariff Board of any Dominion or dependency. And we might recall here the provision in the Ottawa Pact which, besides enjoining on the Dominions the obligation to institute a Tariff Board, where there is none, and to levy protective duties only after a formal enquiry by the Board, also assures to British industrial interests the right to be heard in the Tariff Board enquiries in which they are concerned. In India, there is hardly any need for securing such a formal right, as it has always been possible for the British to prevail upon the Government at home or in India to pay more than due regard to their interests. The concession of fiscal autonomy to India cannot, in the present constitution of this country, make much difference in practice. The conclusion of the Ottawa Pact and the special agreement regarding iron and steel, have strengthened the position of British manufacturers and exporters to the Indian market; and one would have thought that with the ability of the British interests to make themselves felt in the economic policy of India, there was hardly any need for the Industrial Associations in Great Britain to make any direct representation to the Indian Tariff Board.

* * *

As it was expressly agreed at the time of the iron and steel agreement at Ottawa that it should not bind the hands of the Tariff Board or the Indian Legislature acting on its recommendations, it may be supposed that the whole question is gone *into de novo*, and that, therefore, it is natural that the iron and steel producers of the United Kingdom should endeavour to make their case clear before the Tariff Board. Nevertheless, one is tempted to feel that the memorandum submitted by the Board and the appearance of their representative in India, are part of an attempt to make out that concessions granted to the British iron and steel industry are the result of a free and impartial enquiry into the merits of the case. If that were so, we are content to observe that the general verdict and tone of the memorandum give away the show. There is little or no attempt to argue the main thesis that the Tata Iron and Steel Company require no protection from the producers of the United Kingdom, and that, if any protection is required, the additional cost involved in the transportation of the rival products should constitute sufficient protection. There is no elaborate setting out of figures, such as one finds in the representation of the Tata Iron and Steel Company to the Tariff Board. The only point—one which we confess is of great validity—is that the price of iron and steel products in the United Kingdom have been higher than those estimated by the Tariff Board in its enquiry of 1926.

* * *

Doubtless, when the Tata Iron and Steel Company make their comments on the contention of the National Federation, they will be able to adduce facts, which will alter the significance of the prices of the United Kingdom products to the question of protection to the iron and steel industry. The National Federation seem to assume that, because the prices of United Kingdom products were higher than those estimated by the Tariff Board, this circumstance would justify their making the most extravagant demands on India's policy in regard to the iron and steel industry. They have not questioned the fact, in fact, they have been anxious to emphasise, that the prices of Continental products have been much lower than those assumed in the Tariff Board enquiry and that they were necessarily far blow the price of the Indian or the British products. To argue from these two premises that the Indian industry needs protection and even enhanced protection, from the Continental manufacturers and no protection at all against the United Kingdom manufacturers, is reasonable enough. But one fails to see how the National Federation can jump from this to the conclusion that India must afford free entry to the iron and steel imports of Great Britain or that, the Tariff Board must recommend a plan by which the Indian market for iron and steel goods can be partitioned amongst the Indian and British industries, treating them as of equal concern for the people of India. Throughout the greater part of the memorandum which, incidentally, we propose to publish at length in our ensuing *Industries Supplement*, the British manufacturers seem to assume that they are entitled to benefit from the protectionist policy in India exactly in the same measure as the Indian industry or Indian economy as a whole. If it is true that the prices of British products have been more than were assumed in the Tariff Board estimate of 1926 and that Continental prices have been such as to offer the same threat to the United Kingdom steel industry as to the Indian, it might follow therefrom that the Indian industry does not require the same amount of protection from the British rivals as from the Continental producers.

But it passes one's understanding how these circumstances can support a claim on the part of the British industry to equal consideration at the hands of the Tariff Board as the Indian or to a scheme of geographical distribution in India between the British and the Indian producers.

* * *

Nor can the British industry reasonably ask for the removal of the revenue duties now levied on the imports of iron and steel goods from Great Britain. The National Federation possibly argue that the costs of transportation involved in importing British goods into India, constitute an unnecessary protection to the Indian industry, and that the revenue duties form but an additional handicap. It is not realised that to levy a revenue duty on the imports is a right of the Central Government, which it cannot surrender merely for the sake of equalising competition between the indigenous industry and the exporters from abroad. At this rate, a foreign industry might even go to the length of demanding a bounty from the Government of the importing country to represent the differential cost arising from the cost of transportation.

* * *

What the National Federation are asking for is an inversion of the purpose for which the Indian Tariff Board was instituted. It is up to the Tariff Board to point out to the representative of the British manufacturers that the Board functions for the purpose of affording protection to Indian industry from foreign competition and not for protecting the importer from the competition of indigenous producers. In the accepted usage of international commerce, revenue duties are on the same footing as freight or insurance in differential prices. And if we understand the function and the terms of reference of the Tariff Board aright, the Board would not be competent to recommend the removal of revenue duties merely on the ground that they give an advantage to the indigenous producers, which is not indispensable for their competition with the rivals from abroad. The time and expense involved in making a fresh classification of the customs schedule so as to create a class of goods for free entry must, we are afraid, remain a waste so far as the National Federation is concerned.

* * *

Even more preposterous is the demand for the partitioning of markets in India between the Indian and British producers. The National Federation put forward this suggestion on the ground that the interests of the Indian consumer would be best served by the "co-operation," as they call it, between the Indian and the British investors. If the interests of the consumer are to predominate in the deliberations of the Tariff Board, there are only two courses open. Either the consumer should be allowed to enjoy the benefits of low prices which the Continental manufacturers are prepared to offer them, or one must abandon the arid abstraction of the idea of consumer as distinct from producer and consider the national interests as a whole. At more than one point the memorandum of the National Federation refers to the necessity of enlarging the purchasing power of the Indian markets. We are not aware of any means of expanding the purchasing power of the Indian masses other than enabling them to produce values which can command goods and services from other countries in exchange. There is no purchasing power in the world apart from the ability to render a service or to deliver goods; and this means that every man, in order to possess some purchasing power in his hand, must engage himself in a definite productive activity. If the markets for goods, which the country is well fitted to produce for itself, are to be partitioned out in an arbitrary manner between indigenous producers and foreign importers, we do not see how it is calculated to increase the purchasing

power of the consumers of this country. Of the two alternatives that we mentioned, the former cannot, of course, be acceptable to the British industries. The latter is not to their immediate or remote interests. In fact, when the Tariff Board is examining the question of protection for an industry, which is a direct rival to the National Federation, it is not easy for the latter to put forward proposals which would help their own interests and would be acceptable to the people of India. But it were far better to recognise the conflict and to urge before the Tariff Board the wisdom of retaining a healthy competition between indigenous industry and its rivals from abroad than to put forward suggestions after assuming the validity of their own case. We trust that the Tariff Board will impress upon the representative of the British manufacturers that their arguments and suggestions are quite opposed to the spirit of the recommendations of the Fiscal Commission to which the Board owes its origin.

CRISIS IN BRITISH SHIPPING

It is clear from the cables which pour in from England day after day, that British shipping is faced with an increasingly serious situation and that both the shipowners and the Government are exercised about it. First the heads of large shipping companies, then the Chancellor of the Exchequer, and now the President of the Board of Trade have all spoken in quick succession. They express concern and indignation.

It is agreed in England that "something" must be done to protect the British merchant marine and that this "something" should be done immediately; but as yet there is no agreement as to what that "something" is to be.

* * *

Not even the Tory Diehards would recommend the revival of the Navigation Laws which built up the maritime power of England, although several people have toyed with the idea ever since the war. Reservation of British coastal trade to British ships is hardly useful, because British ships already have almost a monopoly of that trade and the threat to do so would not be useful even as a bargaining counter, because no power would stand to lose much. The idea of reserving Empire coastal trade and inter-Imperial trade to British ships has attracted and appealed to many—although nearly 90 per cent. of

the inter-imperial trade is carried by British ships. The question was discussed at Ottawa and in London after the failure of the World Economic Conference. But apart from the danger of retaliation and the likely injury to the great volume of British tonnage enaged in the carriage of passengers and goods in the international trade, the idea does not seem to have attracted the Dominions. The love of South Africa for the mother country was recently exhibited in the grant of a subsidy amounting to £750,000 to two Italian shipping lines. The only devices, therefore, open to England to meet the serious competition of post-War merchant marine assisted by various governments are the levy of discriminatory dues on subsidised vessels of other countries in British ports or subsidy to its own shipping. The first proposal will technically be very difficult to carry out, but it may be investigated. As regards subsidy, the present proposal is an elaborate one, but briefly its basis is that the Government should grant a subsidy of 10 shillings per gross ton per annum for all tramp ships which are trading and a subsidy of 5 shillings per gross ton for vessels which are laid-up. It is estimated that the Chancellor of the Exchequer would have to find about £3,000,000 per annum for this purpose which under present financial exigencies he seems somewhat reluctant to do.

MR. N. R. SARKER ON THE RATIO

The statement of Mr. Nalini Ranjan Sarker on the ratio question was received too late in this office for us to be able to give it the prominence which it amply deserves. Though Mr. Sarker has been obliged to make pointed answers to the contentions raised by the opponents of devaluation, his statement has far more value to the student of Indian economy than a mere pamphlet on a current controversy. The initial remarks about the inconsistencies and shifting of ground of some of the supporters—we must say, perhaps, present supporters—of the present ratio—have no academic interest. Even less interest has the disclaimer of the old contention that the lower ratio must choose Bengal of all the provinces of India for its adverse effects, though we are happy to learn that the vogue of examining a question from a provincial standpoint is now nearly dead. But it is necessary to dispel the misconception, which might dwell in many minds, that the abandonment of the gold standard in England and India has obviated the need for lowering the sterling value of India's currency. It is strange that one should have to labour the point; but it should be obvious at least after it has been pointed out that what matters is the relative value of currencies and not the mere relation between a national currency and gold. If all countries devaluate to the same extent in relation to gold, the country whose currency was overvalued before the change would still continue to possess the handicap of over-valuation. Mr. Sarker has done well to drive the point home with figures and statistics that the over-valuation of the rupee dates back to a farther period than the depression which has forced most countries off the gold standard.

* * *

The rest of Mr. Sarker's statement is concerned with the contention of Sir P. C. Ray that devaluation has done no good to countries like Australia and New Zealand and that the recent improvement in India's exports shows that the 18d. rupee is not such a handicap to the national economy as it is made out to be by the supporters of the Currency League. In the short space available we can do no more than indicate the main lines of Mr. Sarker's refutation of these arguments. As for the former, it is incredible that anyone should deny the good that currency depreciation has done to Australia. If Australia has been the first among the countries of the world to show signs of revival, it is due to the start she had in the race for currency depreciation. Mr. Sarker has quoted numerous authorities to substantiate the most outstanding experience of economic history in recent years. As for the improvement in our exports, Mr. Sarker has attacked the supporters of 18d. from both sides. On the one hand, he shows that in the period of falling trade we had more than our proportionate fall. On the other, in these days of improved trade, we have had less than our share of the improvement. If the evidence of overvaluation of the rupee is abundant, as indeed it is, it is unwise to try to find in the recent improvement in our foreign trade a convenient excuse for a policy of inaction. Many believe that in as much as 18d. has been the *de facto* ratio over a period of eight years, it is more than probable that prices have adjusted themselves to that level and any change in the ratio would involve a disturbance of the equilibrium. Those who fondly cherish this hope or find in this reasoning a justification for their prejudices, we would refer to an article

published elsewhere in this issue on "Some Problems of International Economic Equilibrium" by Mr. J. B. Condliffe, the author of the *World Economic Survey*, the illuminating annual publication of the League of Nations. The authority of Mr. Condliffe and the convincing reasoning adopted by him should open the the eyes of the people to the futility of hoping that adjustment of price levels could have happened in the turbulent times through which world trade has passed in recent years.

THE RATIO AND THE RESERVE BANK BILL

MR. SARMA'S AMENDMENT

(By Telephone)

From Our Special Representative

Delhi 4-30 p.m.

The ratio clauses in the Reserve Bank Bill will be taken up either to-morrow evening or on Monday. The amendments given may be divided under three heads :

(1) Those which seek to maintain the existing legal position ;

(2) Those which seek to introduce a lower ratio and

(3) those which carry no sense, being incorrectly drafted or otherwise not fully intelligible. In the consolidated list issued to-day, Mr. R. S. Sarma's amendments come on the top and are, therefore, likely to be the basis of the central discussion. In fact, it is understood that Messrs. Modi, Ramsay Scott and K. P. Thampan and Sir Cowasji Jehangir have withdrawn their amendments, as Mr. Sarma's is more comprehensive and more loyal to the Currency Act. It is also understood that practically all the parties barring the European group and Mr. Yamin Khan's will support Mr. Sarma's amendment. The amendment to clause 40 reads as under :

"The Bank shall sell to any person, who makes a demand in that behalf and pays the purchase price in legal tender currency at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, gold for delivery at the Bombay Mint at the rate which may be fixed by the law, which is in force on the day prior to coming into force of this section or, at the option of the Bank, sterling for immediate delivery in London at the rate and subject to the conditions under which, on the aforesaid day, the Governor-General-in-Council is, by law, under obligation to sell sterling."

The following is the amendment to clause 41 :

"The Bank shall buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon gold at the rate fixed by law and subject to the conditions which may be in force on the day prior to the coming into force of this section, or, at the option of the Bank, sterling, at the rate at which and subject to the conditions under which, on the aforesaid day, the Governor-General-in-Council is, by law, under obligation to buy sterling."

It will be remembered that the clauses in the Bill as they stand make no circumlocutory reference to the law on any particular day but simply specify the selling and buying rates for sterling at 1s. 5 49/64d. and 1s. 6 3/16d. respectively. The point has been raised before in these columns that, if, as Sir George Schuster has claimed more than once, the Reserve Bank Bill does not seek to make any change in the law relating to the ratio, the Government should have nothing to say to the amendments proposed by Mr. Sarma. The snag lies in the fact that, as in the present state of the law there is no authority for buying sterling at the upper point, the Government would have to come again before the Assembly to give the necessary sanction for the rate at which the Reserve Bank could buy sterling. The effect of Mr. Sarma's amendment would be that it could for the present solve the vexed ratio question and also ensure that before the present 18d. rate is committed to the charge of India's central banking institution, the Assembly will have an opportunity of going into the question carefully without being hustled in the way in which the Reserve Bank Bill seeks to. Mr. Sarma's amendment has also the merit of providing a common ground for all except the most rabid supporters of 18d. to meet and secure breathing time for themselves. As mentioned already, the amendment is sure of support from the bulk of the elected Indian members. The fact that the amendment on a question, on which the Government have felt keenly and have manoeuvred vigorously, is to be moved by a nominated member may strike many as curious. But all that can be said at present is that the decision is the result of intrigues, which have gone on merrily here and which had the effect of fixing the responsibility of moving the amendment on Mr. Sarma.

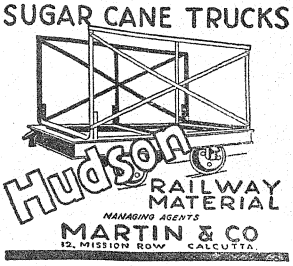
Clive Street Gossip



If subsequent events prove the Reserve Bank of India to be the reforging of our financial fetters in a way that we cannot, for aye and ever, shake them off, let this country remember that three over-pliant, non-official members, more than a power-intoxicated Secretary of State or a sweet-tongued Finance Member, are the instruments and tools in this behalf. Their names should be a burning spot in the nation's memory—burning in shame, humiliation and chagrin. They are :

Sir Cowasji Jehangir, Acting Leader of the Opposition :

Mr. A. Ramaswami Mudaliar, Deputy Leader of the Independent Party ; and

Mr. C. S. Ranga Iyer, Ag. Leader of the Nationalist Party.

Here are three front-benchers standing forth as sturdier champions of the Government than the Government spokesmen, pouring ridicule over every speaker who pressed the Opposition point of view, and superciliously condemning every amendment, brought in by the rank and file, with the air of one who persuades himself that he is a *subjantawala* and every one else a nincompoop. Barring Sir George Schuster, it was not found necessary to put forward, from the Treasury Benches, any other speaker to state the Government's case, or to defend their position. All the statement and defence was furnished by either the one, or the other, or all of the front-benchers, I have referred to. Could one imagine Pandit Motilal Nehru as Leader of the Opposition or Pandit Madan Mohan Malaviya as Leader of the Nationalist Party, offering the official apologia ? Could one imagine Mr. George Lansbury walking into the Government Lobby even if he had only a handful of dissentients walking into the Opposition Lobby ? This, in fact, raises an important constitutional issue. The Leader of the Opposition voting against the Opposition is, I am sure, unheard of in the annals of parliamentary institutions. The President of the Assembly is the custodian not only of the rights and privileges of the House, but also of Parliamentary practice and traditions. Was it not his duty to pull up the Opposition Leader in his perpetrating and unheard-of Parliamentary practice. This conduct of Sir Cowasji Jehangir is so repugnant to accepted decorum that Madame Morin, a French visitor to India, was, as she was watching the proceedings from the President's gallery, shocked so deeply that she kept exclaiming that it was all amazing. Does not the Leader of the Opposition want two of his countrymen to occupy the top offices of the Reserve Bank ?—she asked me.

Dewan Bahadur A. Ramaswami Mudaliar was so fervently identified with the Government view that when Bhai Paramanand stated that he was, the previous day, for a State Bank and that he had, since then, changed his mind, the Dewan Bahadur congratulated the convert on the courage and honesty, he had shown in owning his changed outlook. "Turn-coat" is a word that need carry odium no more. Mr. Mudaliar has laid the flattering balm that the turn-coat shows, most conspicuously, such desirable attributes as honesty and courage. According to his logic, loyalty to creed, or party, or tradition is sheer cowardice. Most of the leaders, acting or deputy or otherwise, are clear-eyed enough to dismiss loyalty as cowardly—and craven. From this point of view, there is far more of courage of this brand in the present Parliament of India than in all the Parliaments of the world put together. Three cheers to our Three Brave Warriors !

The back-benchers and some of the other front-benchers on the Opposition did put up a fight, and showed pluck and adroitness. But, for their stand for what they deemed their duty by the country, scorn was poured on them by our three stalwarts. Sir Cowasji has a ranting, declamatory style. The Dewan Bahadur is meandering and verbose, though well-informed. Mr. C. S. Ranga Iyer can affect the pose of a finished orator. Between them, they rained thundering words of great fury on those, who dared question their wisdom in befriending a measure which has evoked so large a volume of adverse comment. What do *you* know ? What does the country know ? What presumption on your part to claim superior understanding of so intricate a problem ?"—this taunt was, again and again, thrown at the disheartened movers of amendments. "Trust Sir George Schuster, and leave everything to us who have all the knowledge, experience, judgment and statesmanship"—thus were inconvenient speakers sought to be bamboozled.

When such was the attitude, and such the tactics of three important front-benchers including the so-called Leader of the Opposition, is it a wonder that a defeatist air prevails in the lobby, as groups of members sit discussing division prospects ? At voting time, they march into the government lobby, "sniffing after officials with what we have regretfully to describe as a hang-dog expression." The des-

THE 100% PURE VIRGINIA CIGARETTE

* * * * Notable reductions in the price of well known cigarettes, and in spite of the heavy duty. The secret lies in two things, one, that imported tobacco leaf pays lower duty than imported cigarettes, and two, manufacture in this country. The smoker thus gets a *fresher article* at a *lower price*.

The Statesman.

The special air conditioning plant installed in their Calcutta factory ensures a regulated humidity so necessary for maintaining tobacco in its proper condition. The air throughout the building is cleaned, washed, and cooled, and every particle of dust is removed by processes that are unique, and exclusive to Carreras, whose constant aim is to produce cigarettes free from impurities and harmless to the most sensitive throat.

Karachi Daily Gazette.

Carreras who have recently started manufacturing in India have overcome the climatic vagaries of this country by installing machinery and plant to produce cigarettes *in every respect* equal to the article turned out of their well known factory in London.

The Times of India.

* * * * his cigarettes reach him factory fresh * * * * the lower duty on imported tobacco leaf has enabled Carreras to pass on the benefit of the saving in duty to the smoker by reducing prices * * * *

cription is that of the writer of the inimitable "Over A Cup of Tea" in the *Hindusthan Times*. This is a regretful, but extremely truthful and realistic, description.

The entire farce would have fallen to pieces, were it not for the pitiful, but substantial, succour received from unexpected quarters. This support was big enough to make the minority a respectable one, but small to result in victory. It was the Central Party, of which the Raja Bahadur Krishnamachariar is the leader and Mr. R. S. Sarma the king-maker (or, should I say, leadermaker?), which forsook its normal *role* of loyalty to Treasury Benches and strengthened the hands of the Opposition. As I said, the support of the Central Party was fitful. The Raja Bahadur is keen and vivacious for all his advancing years, who has bright sense of humour and quick understanding; but, when he is praised for his humour and vivacity, he cannot make out if the praise were flattery intended as bribe, or compliment tendered as sincere tribute. Thus did he fall to the blandishments of Sir George Schuster in regard to Mr. Arvamudha Ayangar's amendment to delete the clause, imposing five years' minimum banking experience on the Governor of the Bank. This claim has a curious history. In the first week of the Joint Select Committee's consideration of the Reserve Bank Bill, attention of the Finance Member was drawn to the report, published in *Indian Finance* that Sir Howard Denning would be the first Governor. Sir George said that the report was "an absolute lie." Anyway, the members were desirous of framing a clause, which would make appointments of civilians, retired or otherwise, impossible. The formula was evolved, on the lines of the South African Reserve Bank Act, that the Governor should have tested banking experience of at least five years. The proposal was unanimously accepted. Sir George and Mr. Taylor, too, concurred. This was in the first week of the Select Committee deliberations. In the last week, Sir George and Mr. Taylor opposed the very clause, they had supported in the earlier stage. And it was known to everyone that the objection, then raised, was inspired by the Secretary of State. But, they were the only two that voted against. Sir Leslie Hudson and Hon. Mr. Henderson of the European group voted for; Mr. Yamin Khan of the United Party, ditto; Mr. Pandit, nominee of the Central Party, ditto. Yet, all these three groups trooped after Sir George when he asked for the deletion of a suggestion, he had approved of in an earlier stage. Will Sir George say that all this, too, is absolute lie?

All of which gives an idea of the temper and *morale* of the present Assembly. Sir George has, as Dr. Zia-ud-din said, the intoxication of having a majority of votes in his pocket. Mr. Sarma put the matter pithily when he averred that, if the Government brought in a motion that the members of the Assembly should commit suicide, it would be passed by the same majority, which Sir George secured for the Shareholder Bank. Mr. Sarma doubted, however, if the President would put the motion to vote, as he was still an elected member of the House. Party defections, intrigues and personal pique, official blandishments, and fantastic reversal of Parliamentary etiquette—all these have resulted in a position, aptly described by Dr. Zia-ud-din, not unlike that wherein, while you kill my cat and I kill yours, the rats have all the feast to themselves.

One story leads to another. And this one is from Mr. Vidya Sagar Pandya. At a festive occasion, the donkey and the camel were invited. The donkey praised the Camel as the paragon of beauty in the animal kingdom. The camel complimented the donkey on its cadent and musical voice. Bouquets were handed across the floor of the House in cloying profusion. So much so that, at the Conference which met at the instance of Sir Shunmukham Chetty for expediting business, Mr. Sarma gave a tip for saving a day every week. "Let the Finance Member stop eulogising the Opposition members on their statesmanship; and let the latter cease singing the praise of Sir George on his love of India; you can have a saving of a day in the week." Declared Sarma.

WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

Complete catalogue sent free on application.

ON EXPERTS

By G. L. M.

Now that scientists and poets have joined the Battle of the Ratio, economists are beginning to feel nervous, if not panicky. Some of the economists are thinking of composing poems like "An Elegy written in a City Bullion Market" or "An Ode to Devaluated Dollar" or "A Hymn to High Tariffs"; others are considering the question of compiling scientific thesis on such subjects as "theBio-chemical Reactions of Bi-metallism" or "Exports and Ether" or "Refractions of Reflation." *Indian Finance* might now turn itself into a comic journal or take to publishing poems.

I am, of course, all for experts. It is *so* modern. We have experts for illness (doctors); experts for health (sandows and gymnasium masters); experts for the soul (the priest) as well as for the sole (Bata); experts for hair (the barber) and for heirs (solicitors); experts on virtue (the preacher) no less than for vice (the detective); experts for washing dirty linen in private (the dhobi) and in public (the journalist). There are experts in martial law as well as marital law. There are expert motorists, pedestrians, umbrella-repairers and even experts on love—like the eugenist. There was once an expert who when he read Tennyson's famous lines:

Every moment one is born
Every moment one dies

wrote to the Poet that if this were the case, the population of the world would be stationary. As it is, however, the number of births exceeds the number of deaths, he stated; hence the lines should be stated; hence the lines should be recasted thus:

Every moment 1.9 is born
Every moment 1.3 dies

which was not only poetic, but accurate.

It is, therefore, not surprising that the government in this country, who are most advanced and upto-date in all questions where their emoluments or allowances and the profits of the Britishers are concerned, have always realised the importance of *taking* expert opinion on all questions; when it comes to *acting* upon that expert opinion, they also take expert opinion as to whether they should *act* on the expert opinion given by the previous set of experts. Meanwhile, the conditions investigated by the first set of experts undergo a change, so that their reports become out-of-date and a new enquiry is essential. In fact, it becomes imperative from time to time and is often overdue. We have therefore had a succession of experts going into a series of questions for generations. It helps to keep the government well-informed and abreast of the times. Only recently, how many experts have we had? Experts about economy and about expenditure; experts for military budget and training, marine reorganisation, aviation; experts to advise about banking, railway expenditure, road-rail competition; experts for devising expert methods of economic investigation and experts for organising expert economic bureaus; experts for Federation, for Franchise, for Finance and for Federal Finance; there have even been experts for Facts—although to many experts, all facts are born free and equal. Shades of Inchcape, the infallible Pope, the schoolboy monograph of Fredrick Whyte on Federal Governments, of Layton, Salter and a host of others rise before the mind's eye. For experts may come and experts may go; but the problems go on for ever.

One expert, indeed, leads to another. An expert on industrial conditions is naturally followed by an expert on fiscal policy and an expert on currency policy is necessarily succeeded by an expert on banking; an expert on railway reorganisation is the logical corollary of an expert on railway economy, while an expert on *settling* lines of economic enquiry is the inevitable sequence of an expert on *devising* lines of economic enquiry. An expert on agriculture gives rise to experts on land revenue assessment, not to mention experts for sugar, jute and bannanas. The heritage of *expertise* is precious; the light of expert knowledge is carried on from year's end to year's end. Many of the experts appointed by Government are for investigating economic questions because Government have for a long time suspected that economic problems are important.

So much at least is common ground between them and Pandit Jawaharlal Nehru.

Even the experts agree with the Government—they are paid to—that these questions are urgent. But as such questions are awfully complicated, complex and technical, it is *economic* in the long run to have experts for them. Who would have thought, for instance, that the question of purchase of coal is so intimately related to the question of fixing a ratio? Or that trade forms both a tide and a cycle? Or that appreciation of the benefits of depreciation is so lacking that there is not sufficient depreciation for the policy of appreciation? Economic questions are terribly complicated.

But it is necessary to emphasise one fact. Experts are not made: they are born—usually in England and more often in the Indian Civil Service. England, it is well-known, lives principally by exports of manufactured goods. Apart from cotton textile, steel, X-mas crackers etc. she also manufactures experts, who manufacture reports and opinion.

England, therefore, exports experts.

She supplies experts to the League of Nations, Hungary, Russia (who recently re-exported them back to England), China, Africa, Argentine, Ceylon and India. Experts form an important item in the "invisible" imports of a backward country; they help to maintain the international equilibrium of trade. Gold exports from India, for instance, are balanced by the import of experts with golden opinion.

Now consider, for a moment, the services rendered by such experts. If their memoranda and blotting paper were spread from end to end, they would cover half the distance from the earth to the moon. Their reports and notes have filled the pigeon-holes of the Secretariats to such an extent that there are no holes for pigeons to live in and pigeons have had to emigrate to the streets. I understand that there is a strict rule in the Delhi Secretariat that cigarettes must not be thrown anywhere lest they might burn some memoranda of experts lying about. And these experts have foreseen events not only six months before they happened but even eight months before they did *not* happen. They forecast events of 1931 not only in 1932 but even in 1933. There are no limits to powers of these experts. They prophecy a boom in securities market and behold! it does not come off. Experts have then to explain why it did not come off: much like the meteorologist three-fourth of whose time goes in trying to find out why his last weather forecast has been belied by the weather. Inscrutable forces are working both in weather and in the world of finance. Experts have assured us that trade is turning a corner. Every month, almost every week, they tell us so. Trade was to turn a corner when England went off the gold standard, then after the Lausanne Conference, then after the Ottawa Conference, then when America went off the gold standard or off something at least (experts are not yet decided as to what America went off and what she went to). India is turning corners more rapidly than any other country—pace the Finance Member—owing to Ottawa, gold exports, the far-sighted currency and exchange policy, the establishment of the Reserve Bank, Bombay-Lancashire Pact, financial safeguards, goodwill of the City of London and so

forth. No wonder Indians are feeling dizzy at the rate at which we are turning one corner after another. But Sir George Schuster faces the future with hope and confidence every March. The courageous optimism of this greatest financial expert (according to Mr. Anklesaria himself a great expert in judging experts) reminds one of the confidence exhibited by one of the three men falling of a roof who as they passed the fifth floor observed cheerfully, "I am probably falling less slowly than the others." Experts have to decide things *ex-parte ;* but they are determined to solve the economic tangle before the end of this century—provided, that is, mankind survives till then. Expert opinion differs on that point. But all economic solutions, as you know, are hypothetical. Expert conclusions are valid—*other conditions remaining the same.* Fortunately for the experts, but unfortunately for the rest of us, other conditions *do not* remain the same.

There is, I feel, only one difficulty. It's trivial, I admit, nevertheless, I cannot help mentioning it. Experts do not, as a rule, agree as to the causes nor as to the remedies in any given case. Is the trade slump due to a fall in prices or the fall in prices due to trade slump? Are monetary factors the cause or the effect of the present depression? Is the depression due to over-production or under-consumption? Is scarcity of money due to over-abundance of goods or *vice versa* or *verse vica*? Should a country go off the gold standard in June or in September? Should the ratio be changed overnight or in broad daylight? Does our economic system depend on the production of wealth or destruction of crops? Should we spend in order to create employment or save in order to effect economy? Ought we to "Buy British" in order to consolidate the Empire or "sell British" (to foreigners) to encourage international trade? Should we de-flate, inflate or re-flate? Should we have gold, silver, paper or tin as the basis of our monetary standard? On these and numerous other issues, there is no unanimity among the experts. Nor is that all. Experts disagree with one another not only on objective grounds but even on subjective ones. They live by taking in each other's washings. They refuse to acknowledge one another as experts. In fact, they ridicule the perverted knowledge, the fallacies, the heresies and the bias of other experts more than the ignorance and dullness of us poor laymen. Just as no prophet is worshipped in his own country, no expert is honoured by his own set of experts. Chemists never speak well of one another nor economists overflow with affection for each other; physicists receive recognition only from philosophers, artists are at home with businessmen and insurance agents are happy only at jute brokers' offices. Half the time of the specialists is taken up in denouncing one another and in proving that the other fellows are not experts at all. The layman thus begins to suspect everybody and doubt everything. Life becomes confusion worst confounded.

For there are no experts in the one thing common and fundamental to us all and which we are all trying to do, however unsuccessfully. There are no experts for life.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press :—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, December 12.

The title headings of these columns would seem to have more appropriateness this week than during any other. For the important events of the week were at the Gateway of India, the exit of Sir Frederick Sykes and Lady Sykes and the arrival of Lord and Lady Brabourne. As need hardly be mentioned, the change in the gubernatorial office was effected to the accompaniment of the usual formalities and addresses of farewell and welcome. It is long since India unlearned the habit of looking to the addresses or the replies thereto for matters of any significance. Her Excellency is always the fountain of a humanitarian movement for the uplift of women and the improvement of children. Likewise, the retiring Governor is a statesman who battled hard against adverse fortune and who despite the unwelcome break in contact will be long remembered for his zeal for the people over whose fortunes he presided. The replies are couched in terms of empty formalism and the press reporters did their bit to invest the parting scenes with appropriate touches. The lot of the incoming Governor is perhaps harder. He is confronted with a list of grievances and demands from this community or that and everywhere he has to use hollow plea that he is a newcomer without the opportunity of studying problems first hand and that he could give no more assurance than that of careful attention and consideration to the arguments adduced by the authors of the address. But in the addresses presented to Sir Frederick Sykes there is one point on which there could be a ring of truthful sincerity. All the addresses of farewell presented to Sir Frederick laid equal emphasis on the intensely strenuous life through which he had to pass in his Governorship of Bombay. As the address of the Bombay Chamber of Commerce pointed out, "From end to end, the country was torn by disturbances, the trade of the Presidency was jeopardised by constant boycotts and frequent hartals. While in two different years Bombay City itself was for weeks the scene of serious communal riots in which hundreds of lives were lost. Above all, there was a trade depression with its heavy incidence on the revenues of the provincial government and the increasingly complicated problems raised thereby." One point however which one can hardly expect a European commercial body to stress which nonetheless must have constituted the greatest embarrassment to Sir Frederick is the incompatibility of his own spirit of liberalism with the policies which were dictated to him from Delhi and Whitehall. It is a matter of common knowledge that Sir Frederick left to himself could have tackled the problems raised by the intense political agitation of his term of office in a manner satisfactory alike to the people, to himself and to the authorities above him. But the tide of reaction which set in with December, 1931 was too strong for any one Governor, however gifted he might be to stem successfully. For Sir Frederick it was not so much a matter of reconciling his own inclinations with the policy he had to pursue but of making up for the inadequacy of that policy for the conditions with which he had to contend. While in most other parts of India the formula of the dual policy might have fitted admirably, in Bombay, at any rate, something more was unquestionably demanded. This the spirit of Sir Frederick could have supplied but for the indiscriminating interference of the Government of India. For it must be said to the credit of Sir Frederick that he had always hit on a line of action which minimised the resentment of the public against the measures he had to execute and to preserve his good name from the rancour which the political situation of the last few years had raised. It might seem to many that his twelfth-hour attempts at rural reconstruction were but a vain attempt to make himself popular with the people. There can be no doubt that they were dictated by the truer nature of the ex-Governor which had been eclipsed by the political pre-occupations.

Sir Frederick Syke's reply to tthe address of the Bombay Chamber is notable for a brief survey of the history of Bombay's finances in the last twelve years. He urged that Bombay's finances have followed the history of the trade and commerce in the City. He divided the period into 3 divisions, the first 1921 to 1924 which is a boom period, the second from 1925 to 1929 one in which revenues were shrinking and attempts were made at retrenchment and the third 1930 onwards which is a period of economic distress and depression in trade. Sir Frederick said that it was the year 1925 that brought about the important budget deficit, a deficit of 76 lakhs which increased in 1926 to nearly a crore and a half. A slight improvement was noticeable in 1927 and 1928 but the four years accounted for a revenue deficit of 266 lakhs, which must be attributed chiefly to the shrinkage of revenue for the expenditure decreased in the four years by 90 lakhs. Retrenchment was taken in hand but it could not produce appreciable effects because the disastrous fall in prices which occured in the year 1932 had made bigger holes in the provincial budget than could be patched up by retrenchment. Sir Frederick's claims on behalf of his Government in the matter of retrenchment of public expenditure are as below:

The Reorganisation Committee that reported last year investigated the whole of the administrative mechanism with a view to a permanent reduction in expenditure in order to bring it into line with the seriously diminishing revenues. Their proposals were estimated to bring an eventual betterment of two crores; but of this, 82 lakhs was to come from savings on pay and pensions and only 60 lakhs was within the power of the Local Government and the legislature to secure in the near future. My Government have sanctioned revised scales of pay for most of the provincial and subordinate services, and the the application of these scales is expected to result in an ultimate saving of about 34 lakhs under pay and 7 lakhs in pensions. Revised scales of pay for the remaining provincial and subordinate services are under consideration and will be sanctioned shortly. The total financial betterment anticipated from action taken on the report of the Reorganization Committee and other retrenchment measures in the financial year 1933-34 amounts to 24 lakhs, which will ultimately be increased to 76 lakhs. It is clear, therefore, that the Government's efforts at retrenchment have met with a real measure of success.

Though it is natural that Sir Frederick should attempt a Parthian shot at the critics of Government's campaign of retrenchment the fact that the budget for 1933-34 is expected to balance is a welcome sign of the change in the position of the Government of Bombay. That the total expenditure excluding debt and pension charges in 1933-34 is 11.20 crores as compared with the corresponding figure of 12.32 crores in 1929-30 and 13.28 crores in 1921-22 is a measure of the success of the retrenchment committee even within the restricted scope offered by the Government's anxiety to keep certain departments and avenues of public expenditure from the axe of the retrenchment committee. However, the Bombay Chamber of Commerce have thought it fit to urge in the address presented to the incoming Governor to urge that the call for economy is no less urgent to-day and to express their hope that under His Excellency's administration it may be found possible to carry further the policy of retrenchment recommended by the Committee. In the opinion of this Chamber the possibilities in this

direction are by no means exhausted and we feel sure that financial salvation lies along those lines and has not been found in the search for fresh forms of taxation or of the perpetuation of certain emergency taxes already in existence. It is natural that Sir Frederick himself had confessed that during these years the Bombay Presidency has borne the burden of additional taxes to the tune of 60 lakhs and that the Presidency is entitled to demand that so long as the Government are not in a position to give relief in respect of this 60 lakhs no valid claims can be had in behalf of successful retrenchment of public expenditure. There can be no doubt that in contrast to the increased burdens of taxation the taxable capacity of the people has been on the decline. The decline in the trade of Bombay is only too well known. Time and again the commercial bodies of this City have urged on the Government both provincial and central the gravity of the situation that has developed and the Bombay Chamber of Commerce in their address presented to Lord Brabourne urged that this matter should receive their anxious consideration. Though doubtless the decline in the trade of Bombay is due partly to the diversion of trade to other ports and that the question of ports is a central subject in which the provincial government cannot interfere the provincial government have a responsibility in investigating into the possibilities of effecting an expansion of trade. As hinted already the new Governor took refuge under the plea that he is a new-comer and the fact that ports being a central subject would interfere largely with his capacity to secure the desired end.

There has been of late a recrudescence of the strike fever. In Ahmedabad even the normal attitude of employers and workers to await the decision of Mahatmaji has not sufficed to set at rest the bickerings on minor questions. It will be remembered that the outstanding disputes between the employers and the workers were referred some time ago to Gandhiji and that pending Gandhiji's decision the arbitration Board has decided not to hold its meetings to consider the question of the wage cuts. Gandhiji has asked for the supply of information about the balance sheet of 22 companies. And now it would appear that difference of opinion has arisen between the millowners and the Labour association regarding the supply of such information. The mill owners' association has virtually complied with Gandhiji's request but the labour representatives demand that the information should be supplied in another form. On December 11, the weavers of the Shorrock mills went on strike on account of cut in wages. It would appear that following an altercation between a jobber and a weaver all the weavers went on strike. The authorities have notified the strikers that those who do not join before the evening of December 11th would be paid off on Monday. The strikers have not resumed work. Meanwhile, the strike fever has spread to the workmen of the hosiery factory at Barejid.

Trouble is still brewing in Sholapur where the operatives of all the mills have been notified by the local mill management that as from the new year there will be a reduction of 12½ per cent. in the aggregate of the wages of all workmen except those whose standard monthly wages including dear food allowance is now Rs. 13½ or less. The wages of female labour are to remain unchanged. It has been contended, on the one hand, that the proposed cut is from the aggregate of the monthly wages of the operatives and not from the dear food allowance which the management are offering them on a proportion of 30 to 38 per cent. of their wages. It cannot be denied that a cut in the wages is a cut whether it is effected in relation to the aggregate of monthly wages or a direct inroad into the dear food allowance. Just as the employers have been at pains to make out that they are leaving the dear food allowance in tact, so it would appear the labour leaders are going to the other extreme of explaining to the workmen that the attack is wholly on the dear food allowance. For the present strikes are being warded off by the arrest of one or two leaders on charges of delivering inflamatory speeches at labour meetings. It is regrettable that in addition to the material disadvantage of a cut in wages labour should have to nurture the sentimental grievance of having 6 leaders taken away from them on some charge or other.

The dissensions in the Bombay stock exchange on account of special measures taken by the Exchange to deal with the situation caused by the transactions in the Currimbhoy group of shares have continued and the latest echo of it was heard at an extraordinary general meeting of the Bombay Stock Exchange. Resolutions were adopted in supercession of the resolution that is passed by the general body in October last. Mr. K. R. P. Shroff informed the meeting that the Board of the Exchange had received a legal notice from one of the dissentient members asking for a postponement of the meeting till a legal decision was given in the case now instituted challenging the validity of the scheme.

After some discussion, the meeting adopted the following resolution: "That commission should be charged in the Clearing House on Government securities and shares at double the existing rates as from January 1, 1934; that each working member should be charged a monthly fee of Rs. 5 from January 1, 1934; that a moiety of the commission charged as aforesaid and the amount of the fee should be set apart and collected as a fund to be named "Special Contingencies Reserve Fund" and that the Board of Directors be and are hereby authorised to make such payments or disbursements out of the fund or wholly or partly appropriate the fund or otherwise deal with it as the general body of the Exchange may from time to time by majority direct at an extraordinary general meeting, convened for the purpose."

It was also resolved that the rest of the resolution passed in October last should stand.

It was further resolved that the Board of Directors be authorised to sell the following shares which were taken delivery of in pursuance of the scheme: Fazals 654, Pearls 319, Crescents 705, Pabani 350, Indian Bleaching 300 and Indore Malwa 33, or such part thereof as they may deem fit as and when they think it advisable.

OLYMPUS

(From Our Correspondent)

New Delhi, December, 12.

Like all politicians Sir George Schuster has two views on many a public question. And the secret of his success with the Assembly—leaving aside the generous allowances he is able to give the members through Committees and London trips—is that he is able to sympathise with them in private even when he has to oppose them in public.

* * *

One such occasion occurred last week when the Legislative Assembly defeated the Government for the first time over the Reserve Bank Bill. Originally, the Bill provided for a branch of the Reserve Bank in London, and the Bank of England was to do this job. The Joint Committee gave the option to the Central Board to have their own branch in London if they so wished. The Assembly took away this option and made it obligatory on the Board to have their own branch in London.

* * *

Sir George Schuster seemed mightily displeased with this change, and those who had not been taken into confidence interpreted his warning as indicating the possibility of his getting the change reversed in the Council of State. But soon a word of comfort went round the Benches that, in fact, the Finance Member, was personally pleased with this performance.

* * *

One must certainly compliment Sir George for the manner he is able "to put the Members into his pocket" Dr. Ziauddin Ahmed, who is one of those who have previously been so put, has now discovered the truth and indignantly protests against it. But Sir George Schuster is not worried. The field for choice is large, and merrily the Bill goes through its zig-zag path to its destination.

* * * * *

But the passage has certainly become long and wearisome even for Sir George Schuster whose patience however is inexhaustible. With soft words and sweet delivery, he continues to hide his real feelings against the proceedings. Except when he dismisses a member's remark as "irrelevant," he is on his guard. But his method lends itself to dilatoriness. So that Sir Lancelot Graham's programme is upset week by week.

* * *

Now the climax is reached and the Council of State has been told that they are to meet only for two days and disperse thereafter for the Xmas and reassemble early in January. It is said that the Council, having been summoned for a particular date, has to meet and that, in order to create business for it, the Oil Bill was rushed through the Assembly to-day. The debate on this Bill was of particular interest. The Finance Member protested that the Bill was to protect Government revenues while the Opposition maintained that it was meant to protect the B.O.C.

* * *

The Rebate on the Reserve Bank Bill has brought into forefront a question of procedure which may require the attention of Sir Shanmukham Chetty at leisure. Too often has reference been made to the proceedings of the Select Committee and varying interpretations have been given. It may be that in the case of this exceptional legislation this method helped the House to get to know things better than they would otherwise. But can this be observed as a normal practice?

* * *

For long the practice was that the proceedings of every Select Committee were so privileged that any newspaper which published them did so at the risk of forfeiting its Press Gallery privileges, and the Member who referred to them invited invariably a snub from the Chair. The old practice was no doubt too rigid, but at the same time freer exposure of Select Committee proceedings cannot lead to promotion of the real object of Select Committee procedure.

* * *

It may be said that the Members sometimes give their consent in the Committee to certain provisions on assurances given verbally, and that they refer to the Committee proceedings with a view to have those assurances reproduced on the floor of the House. But the correct method would be to insist on those assurances being incorporated in the report of the Committee which is aimed as much at defining the scope of the changes made in a Bill as to indicate the intention of the framers of the law and how it should be given effect to.

* * *

With the arrival of Gandhiji and Pandit Jawaharlal, Delhi is feeling once again political thrill, reminiscent of the days of the political excitement of two years ago. The Mahatma is not on a war path, but Government is very carefully watching the effects of his movements. They find that public is being once again roused from its political stupor and that sooner or later it will take a definite political shape. Their hope is that this feeling will be diverted towards Council—entry struggle, but they also have a fear that it might lead to a revival of the Civil Disobedience movement.

* * *

Pandit Jawaharlal Nehru, however, is a different problem. He is touring on a political mission. But hitherto he has been preaching his creed in the abstract and this, according to Government's promises in the Assembly, is not an offence. In a way the Pandit's activities have helped to create factions among nationalists and have, therefore, given no cause for anxiety to Government. But the fact that a rumour spread here to-day that a notice will be served on him not to address any public meeting shows which way the wind is blowing. These rumours turn out to be baseless to start with, but they often prove true in the end.

* * *

Pandit Jawaharlal is staying with Dr. Ansari while Mahatma Gandhi has taken his abode at the Birla House. This is not an accident. The Pandit and Mr. Birla have serious differences of opinion. The Mahatma on the other hand believes in befriending the capitalist, while standing ever for labour.

SOUTH INDIA

(From Our Correspondent)

Madras, December 12.

The South Indian tour of their Excellencies Lord and Lady Willingdon has, on the present occasion, more than the usual and personal interest. It has often been the case that the visits of British officials to the Native States have not been for the sake of pleasure of amusement though doubtless the Governors and the Viceroys have indeed much to gain by renewing their personal touch with the rulers and the chief functionaries of the Native States. But more often than not such visits have been undertaken with ulterior motives of State policy that come to light only after the deed has been done. On the present occasion, the visit of Lord Willingdon to the South Indian States was probably inspired by the desire to give an impetus to the solution of issues outstanding between the British Government and the goverments of the Native States. In the case of Cochin at least, it is valid to suggest that His Excellency might have hoped to speed up the settlement of all questions connected with civil and legal jurisdiction over the harbour area. This is no mere conjecture ; for in the State banquet which His Highness the Maharaja of Cochin gave to their Excellencies, Lord Willingdon specifically referred to the question of the jurisdiction over the area of the Cochin harbour. It is natural that the British Government should not be content to leave the *status quo* in this regard undisturbed for the future. The Cochin harbour scheme has been proceeding in a manner that should be gratifying to all those who wish to see the trade of India expanded. As Lord Willingdon himself remarked, the time might soon come when Indian trade and industry would so expand that it would outgrow the outlets now available for her commerce. It is certain that Cochin has all the advantages which the experience of history shows are necessary for the development of a major port.

This harbour, the final stage of the construction of which is yet to be put through, is admitted on all hands to be the most sheltered one in the East. It consists of over a 100 miles of backwaters with natural advantages in a remarkable degree. A great deal has already been done in the way of construction. A channel of 16,000 ft. long 400 ft. wide and 36 ft. deep has been dredged which has made it possible for big ocean going steamers to enter the harbour. If it is pointed out that it is sufficiently deep and wide to admit every ship that passes through the Suez Canal it will be realised what place it would occupy in the international exchange of commodities in the future. In the progress so far made with the construction, special mention must be made of the work of the dredger "Lord Willingdon." I have myself had occasion to watch the dredger in actual working and with the memory of the white elephants with which the finances of the Government of India have been saddled in the name of dredgers and the colossal failure of the Back Bay scheme in our mind, it is difficult not to feel profoundly grateful for the work done in Cochin with this dredger. Starting operations in December, 1928, it has dredged as much as 300 million cubic yards of soil which is stated to amount approximately to the annual maintenance dredging of 30 vessels in the port of Hull. As a result, 330 acres of land have been already reclaimed contiguous to the island of Vendurithi. Provision is made for the reclamation on the whole of 830 acres and the programme for the first part of the fourth stage includes the reclamation of 438 acres. The harbour works have so far cost Rs. 1 crore and the fourth stage is estimated to cost Rs. 91 lakhs. The three governments concerned namely those of Madras, Cochin and Travancore share equally in the costs and hope to profit equally from the revenues of the port.

The potentialities of Cochin as a port are immense, almost unlimited. If it is true that the exchange of commodities between the Western and the Eastern Hemisphere are to be increased in the near future consequent on the development of the Asiatic countries and the development of their commerce with the U.S.A., then it might almost be said that Cochin might well develop into the *entrepot* of trade in this part of the world. It is natural that the British Government should cast green eyes on the political authority of this piece of territory. Efforts have been made in the past to persuade the Cochin Government to cede its authority to the British Government in this area. The authority of the Cochin Durbar has a somewhat curious territorial distribution. If one proceeds from Ernakulam, the capital of the State, up to Madras it is curious how small strips of British, Cochin and Travancore territory shuffle themselves in a bewildering manner within a small distance of 30 to 40 miles. The changes are duly announced by the varying uniforms of the policemen on duty at the railway stations. It is sad that a State whose territory consists of broken strips intermingled with peoples owning a foreign allegiance should have to look on at attempts at fresh inroads into its authority. It is quite conceivable that Travancore and Madras should claim and share in the proceeds of the port not only on account of the fact that the little State, left to itself would be powerless to develop it but also because the port of Cochin can be sustained only by the vast hinterland stretching into Travancore, and the greater part of Bombay and Madras presidencies. But it is a different matter to ask for the normal political authority to be ceded to the British Government. Thanks to the rising spirit of nationalism both in British India and in the States, there has been of late more pronounced spirit of resistance to the demands of the Paramount Power. And unless some external pressure were to be brought into play, it is unlikely that Cochin will accede to this unreasonable request. It is to be hoped that the visit of His Excellency Lord Willingdon to Cochin does not betoken the exertion of such power.

In Travancore, the Viceregal visit was perhaps of a more personal and social kind. With the death of the late Maharaja, the old order in Travancore may be said to have changed. His late Highness had himself distressing premonitions. Well educated as he was and endowed with a rare intelligence and insight into men and things, he had still the old-worldish superstition. The landslide which occurred a few months before his death and the tearing campaigns for temple entry which were then conducted almost induced him to wish that his death were hastened and that he were spared the sight of unwelcome changes. Among the things which His late Highness shunned with religious horror was the social life of the West which he knew would be inescapable once the members of the ruling house of Travancore came into close personal touch with Delhi or Simla. What he dreaded most has come to pass sooner than he himself could have feared. Thanks to the place of Sir C. P. Ramaswami Iyer in the counsels of the State, the ruling house of Travancore has been caught up in the eddies of fashion and the speech of His Highness the Maharaja at the State banquet and the reply of Lord Willingdon thereto show that there is no hearking back. Not that one could be cocksure that a touch with the centres of power should necessarily be to the detriment of the rulers and their subjects. But it yet remains a question whether a ruler at such a young and impressionable age will imbibe the better qualities of the distinguished administrators who come out to rule his country or whether he will succumb to the deleterious effects of aping foreign fashions.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

JETTISONING OF DISARMAMENT

The jetsam of Disarmament is, at last, discerned on the shores of Albion. How long it will take to espy the flotsam of the League of Nations, it is yet too premature to hazard an opinion upon. A Press correspondent has, very truly, remarked that the highest hope for Disarmament is that its future is not, directly, dependent on the action by the British Government. No more fitting compliment can be paid to the bungling of Disarmament by Sir John Simon, the Foreign Secretary.

Under cover of swinging back to realism, Great Britain has gravitated towards the German point of view. The talk, till now, was that all other countries should eventually disarm to the level of German Disarmament. By German level of Disarmament, was universally understood the limit, at which Germany has been obliged to disarm under the Treaty of Versailles, at the close of the War. But, to-day, the German level is very much higher than that, permitted under the Treaty of Versailles. The German clamour for equality is a mere blind for maintaining the level, to which she has raised herself at present. Hence, no agreement, which does not sanctify the present German level will be acceptable to her.

In other words, to talk of Disarmmament is a misnomer. To be precise, the Powers are considering the feasibility of reducing their armaments to the present German level. The problem before Diplomacy is one of re-armament or under-armament, as compared with the present strength of the Powers. Thus, Great Britain is veering round to an armed camp peace, which fact is concealed in the flamboyant language of Britain's swinging back to realism.

It is surmised that the French will also accept facts, as facts. What else can France do in her solitude? Britain will, in all probability, not interfere in the negotiations between France and Germany. The claims of equality by Germany, and of security by France, are questions of concern only to the respective countries, and not to other nations.

But, Britain will interest herself in intiating an informal conference of ambassadors, very probably in Italy, if only as a *via media* between Mussolini's Four-Power Pact platform and France's League arena. The ambassadorial conference is expected to attain a foundation of agreement. Britain will, however, endeavour to keep the aims of of France and Italy from too great a divergence. Such then is the sorry fate of Disarmament. When it finally emerges from the ambassadorial conference, the League will have no other work but to register the Diplomatic Convention of uniform armament. As on the eve of the Great War then, so now, the fate of world peace is at the mercy of armed, but not disarmed, Powers.

One thing is certain. For the time being, the armament expenditure, in material as well as in personnel, will decrease, giving some relief to the various national finances. The coming weeks will be rich with developments, regarding the armament problem.

Parliament Act Amendment

As far as Britain is concerned, public interest in the coming days will be diverted to a problem, which is nearest to the heart of the British Demos. The British people have, for centuries, been jealous of the privileges of the House of Commons. In 1911, the Cabinet of All Talents, under the Premiership of the late Lord Oxford and Asquith, enunciated the Parliament Act, by which the power of the House of Lords to create deadlocks was broken.

Now, an amendment to the Parliament Act is proposed. On December 1, the text of the Amendment Bill was published, whereby any published Bill having been passed by the Commons and not passed by the Lords, and in the case of a Money Bill not passed without amendment within one month after it is sent to the Upper House, shall, unless the Commons direct to the contrary, be referred to the decision of a poll of the members of the Local Authorities of the United Kingdom, as to whether the Bill shall become an Act, without the consent of the Lords.

The implications of the amending Bill will need time for elucidation. But, on the face of it, the Amending Bill has this advantage. At present, if a Bill, passed in the Commons, is thrown out in the Lords, it will have to be re-introduced in the Commons in another session. It is only on the third occasion of such a process, the Bill becomes law without the consent of the Lords. The present Amending Bill obviates the time lag, by introducing the referendum to Local Authorities. Even then, the Commons reserves the right to direct otherwise. It, therefore, seems that the Amending Bill tends more towards the advantage of the Commons, than to the Lords. The coming week will enable access to further particulars regarding the significance of the proposed amendment to the Parliament Act.

Nothing is yet known as regards the reform of the House of Lords itself. Unless such a measure is also undertaken, the House of Lords cannot function to the unquestioned advantage of the general public. Sir Stafford Cripps is, however, for the total abolition of the House of Lords.

Japanese Competition

The House of Commons is in session. The main interest of the week centred on the debate upon Japanese Cotton Competition. The chief contribution to the debate was by Mr. E. M. Fielden, a manufacturer and spinner. He expressed his belief that Japan was selling cloth at a price less than it cost her to produce. But, Sir Herbert Samuel analysed the legitimate complaint into four points:

"First, Japanese conditions of labour were much lower than our own.

Secondly, by depreciation and manipulation of her currency Japan was undercutting the world.

Thirdly, the Japanese Government was responsible for unfair shipping subsidies.

Fourthly, there were cases of fraudulent imitations of our trade marks."

In replying to the debate, Mr. Runciman did not come out well. When he claimed that, but for the tariff, Japanese goods might have been found even in Liverpool and in Manchester, he met with a fusillade of "they are," from several lusty throats. Mr. Runciman, however, wriggled out of the protest lamely by quoting figures, which did not quite strengthen his case. While 68,000,000 square yards of Japanese cotton goods had been imported in 1931 into the United Kingdom, such imports fell to 11,000,000 square yards in 1932 and 15,000,000 in the present year.

The figures only prove that the depreciation of the last year caused a heavy fall in Japanese imports, whereas the recovery of this year has again shown an increase in the imports.

Social Services

Before referring to the Labour amendment to the Unemployment Bill, introduced in the House of Commons for second reading, it may be of interest to have a survey of the social services, which successive governments have rendered to the nation.

In the latest year for which figures are available,

Air Mail Week.

—in most cases 1931—no less a sum than £490,351,000 was spent on the principal forms of public social service in England, Wales and Scotland.

The services in question consist of those provided under the Unemployment Insurance Acts, the National Insurance (Health) Acts, the Widows', Orphans' and Old Age Contributory Pensions Acts, the Old Age Pensions Acts, the War Pensions Acts and the Ministry of Pensions Act, the Education Acts, the Acts relating to Reformatory and Industrial Schools, the Public Health Acts (so far as they relate to hospitals, the treatment of disease, and maternity and child welfare), the Housing of the Working Classes Acts, the Acts relating to the relief of the poor, the Lunacy Acts and the Mental Deficiency Acts.

In 1900—before either health or unemployment insurance was instituted—the total was £36,006,000, and in 1910 it was £62,921,000.

There was a big jump in 1920, by which time the two forms of State insurance, as well as old age pensions and war pensions, were in operation, the total being £306,618,000, while ten years later it was £468,247,000.

It is also shown that in the latest available year 12,360,000 persons were directly benefiting from the expenditure on unemployment insurance and 18,532,000 from that on health insurance.

There were 1,888,315, beneficiaries under the Widows', Orphans' and Old Age Contributory Pensions Acts, and 1,630,000 under the Old Age Pensions Acts, while 1,111,000 were benefiting under the War Pensions Acts and Ministry of Pensions Acts.

Unemployment Bill on Second Reading

The Labour amendment to the second reading of the Unemployment Bill was moved by Mr. Arthur Greenwood, and it declined to assent to the second reading as the Bill failed to preserve intact the value to and status in, the community, of all the victims of unemployment. The debate, which ensued, is noteworthy for the exposition of the Labour position, given by Sir Strafford Cripps, regarding the Means Test. He said: "if the cost of abolition (of the Means Test) is that some few people may draw transitional benefit, who should not draw it, that is a cost well worth paying."

From the Liberal side, Mr. Graham White, hoped that the new proposals would not deter the Government from raising the school age. That would free some 600,000 working places for men in their prime, and would save the public funds, about £88 millions.

UNITED STATES OF AMERICA

BELLICOSE DOLLAR

The tussle between the general financial community and the Administration has been coming to actual grips as the session of Congress draws nearer. The monetary policy of President Roosevelt has become the sole obsession of "sound money" protagonists. The laudable aim of national recovery has been, in the heat of controversy, reduced to a babel of doctrinaire disputes. President Roosevelt has called in the aid of the quantitative theory of money for raising the price level of commodities. The claims of the theory are not disputed, but the President is taken to task for the methods of approach he adopted, and the results he so far obtained. He is perhaps against bare-faced inflation, lest it should immediately provoke a currency war on both sides of the Atlantic. The gold-buying policy is, however, intended to achieve the national good without alarming other nations. He is often criticised for not forcing a sharp rise in the buying price of gold ; but, by adopting such a course, he would put the Administration in an awkward position, in case open market operations, on a large-scale, were found to be necessary in order to achieve his end, in an effective manner.

The country has enough currency within it, and the depreciation of the dollar has made the further expansion of credit possible. But, what is needed is that hoarders of currency should be induced to circulate their money by making purchases freely. President Roosevelt therefore hit upon the policy of a gradual depreciation of the dollar. He was quite justified in expecting that such a policy would induce the public to convert their cash into commodities and utilities in view of a reasonable expectation of dearer prices at a later date.

Every act in the monetary policy of President Roosevelt clearly indicated that its end was the depreciation of the dollar, and conversely an appreciation of prices. But, the financial community went into sulks over the matter of the President keeping his own counsels, and not divulging the aims and purposes of his *modus operandi*. Instead of thoroughly and whole-heartedly co-operating with the President's purpose, the financial community rendered a disservice to the national cause by kicking up much dust over monetary dogmas. The entire Press subserved the interests of the financial community. The net result was that a false alarm was raised, regarding the efficacy of the President's monetary policy. Naturally, the general public, in spite of the great popularity of President Roosevelt

thought that it would be safer to wait and see how things shape, before it made up its mind one way or the other.

It will now be clear why Father Coughlin, a priest with an enormous following in the Middle West, told a New York audience that the sound money movement was "British propaganda from Tory Bankers." Whatever his data for making such a remark may be, the sound money men have often betrayed their love for British ideal, as in the case of amending the Securities Act on the British model. For another thing, Press comments across the Atlantic are far too impatient and hostile for an outsider, with a judicial frame of mind, to indulge in.

Whatever steps were taken in the pursuit of gold buying policy, the Financial community and the Press on both sides of the Atlantic racked their brains to read anything other than what the new step clearly indicated. If the dollar was firm, the critics of President Roosevelt would, unsolicitedly pose that their campaign was producing some wholesome effect on the minds of the President and other inflationists. But, quite immediately, a section of them would characterise that the President's so-called gesture towards an early stabilisation was sheer bluff. One section would, again, start the theory that the bluff was intended to placate financial subscribers to the Government's issue to meet maturities on December 15, as well as to confuse bear speculators. Another section would veto such a motive for the President's policy, on the assumption that Federal maturities would be met by the issue of the "United States Notes" paper money, through the adventitious help of the Reconstruction Finance Corporation. But the net result of all these baffling mental acrobatics has driven the critics to make absurd statements, such as, that the buying price of gold may be checked once more, or may even be lowered, for no particular reason. But, surely, President Roosevelt and his Administration must have a very particular reason for their actions however ignorant their critics may be about them. The real state of mind of the critics of the President's policy betrays the futility of over-estimating the effect of the sound currency campaign in forcing a change of policy on the part of President Roosevelt, and that the influence of Wall Street on Washington has been neglible.

It is, perhaps, nearer truth to say that the firmness of the dollar was managed in order to strengthen the prices of Government securities during the weeks of December, as banks hold large bunches of them in their *portfolios*. The steadiness of the dollar is also partly due to the homeward return of some of the refugee capital from London. Above all, the issue of greenbacks may be left to the decision of Congress itself, as its repercussion is bound to be world-wide, and crucial in an international sense.

But, the battle between the two sections of monetary doctrinaires is being continued with something like real frenzy. The platform of the inflationists under Senator Borah, is the National Grange, the largest organisation of the farmers. The Sound Money group, headed by Professor E. W. Kemmerer, has formed the National Committee of Monetary Policy, with the object of organising public opinion in favour of an immediate return of the gold standard. Professor Raymond Moley, as is to be expected, stresses the value of the depreciated dollar as a trade weapon, and inflationists are holding mass meetings in various parts of the country. Mr. James Warburg in reply to Senator Borah's challenge to produce an alternative, proposes an intelligent revaluation in conjunction with Great Britain and the establishment of a modernised gold bullion standard. But, his scheme evades the issue of raising commodity prices to 1926 level. It is but natural that orthodoxy such as the economic faculties of Columbia and Connell Universities, have made common cause with Mr. Warburg. But, the Congressional leaders in Washington are all of the opinion that the gold policy would be pushed to the bitter end. It is immaterial, therefore, whether Congress increases, or diminishes the dictatorial powers of President Roosevelt. As against the view of the Congressional leaders, Professor Moley differs ever so slightly, with his prediction that there will be less deliberate concentration on the depreciation of the dollar abroad and more concentration on controlled inflation at home, without detriment to an agreement with other countries for stabilisation at new parities, on some form of gold standard.

But foreign opinion is rather for the adoption of direct methods of inflation, which would decrease the time lag between a fall in the dollar and a rise in internal prices, and thus diminish the disorganisation, caused to other countries by the depreciation of the dollar.

Bond Market Improves

The raising of the gold buying price has been very irregular. The Administration would neither abandon the raising of gold-buying prices, nor pursue the usual practice regularly, day in and day out. Its object is that the public should not run away with any fantastic notions of an early stabilisation of the dollar, or the ultimate depreciation of the dollar to a 50 per cent. dollar. The Administration has, however, no more terrors for the weakness of the Bond Market, as the flight of capital has been effectively prevented. Even the occasional raising of gold-buying price is no more weakening the Bond Market. The Reconstruction Finance Corporation has been buying Government bonds obviously with a view to maintain prices. Mr. Morganthau, the Acting Secretary of the Treasury, recently announced that the Treasury purchased $8,748,000 of Governmment bonds on account of various funds under its control. In the coming weeks, bonds should considerably appreciate, as heavy buying is expected under R. F. C.'s Deposits Insurance Scheme, which stipulates that its funds should first be invested in Treasury issues.

Can Russia Buy U. S. Goods ?

The only other subject, which shares the public interest with the monetary policies of the Administration, is the prospective trade with Russia. The recognition of the U. S. S. R. by the United States

CALCUTTA,
The 14th December, 1933.

Air Mail Week

has produced a pleasing effect in almost every quarter of the country. Some American bankers and bond-holders are, no doubt, worried as to their claims against the past obligations of Russia. Business circles eagerly look forward to expand trade in the direction of Russia ; but, they are reluctant to grant long credit, without some kind of Government guarantee. President Roosevelt was aware of these possible troubles to the establishment of free commercial relations with Russia, before he decided upon recognising the U. S. S. R. It is now proposed, therefore, to have the Reconstruction Finance Corporation undertake the extension of long credit to Russia. The Administration has power to authorise the R. F. C. to extend credit ; but, there is no lack of groups who are opposed to the participation of the R. F. C. in providing credit for Russia. These hostile groups may raise their voice when Congress is in session.

But, there is no cause for alarm as to Russia's ability to honour her trade obligations, provided long credit is extended to her. In fact, the Soviet assets in gold, or in foreign currency, is a closed secret with the Russian authorities. Stores in Russia have to sell on a rationing basis.. But, foreigners, and even Russians, can buy without rationing restrictions in what are known as *torgsin* shops, which accept payments only in foreign currency, gold and jewellery.

Similarly, all remittances from abroad to Soviet citizens are gathered by the State through this system.

Besides, there is the domestic production of gold, the figures for which are not made available to the public. Estimates of the assets of gold and foreign currency, accruing to the State, range round about 100 million dollars per annum. Hence, Americans need have no anxiety, if the R. F. C. extended long credit to the U. S. S. R.

The immediate result of the cordial relations between the United States and the U. S. S. R. will be the revival of American technical aid, as in 1929 and in 1930. Apart from the export of services, the exports of goods will pertain to railroad and general industrial equipment, copper and steel, electrical supplies, cotton and cattle.

N. R. A. Pushes On

Beneath the dust, kicked by the Sound Money stampede, a strong undercurrent of cheerfulness prevails among the small merchants and smaller manufacturers. In view of the fact that the Administration scheduled its deals to yield striking results about the middle of December, it is no small satisfaction for President Roosevelt and his advisers that the position of the farmers has been far better, than a year ago. If higher prices and federal bounties shrank a bit on account of the increased costs of the manufactured goods, farmers cannot but feel gratified with the improvement on balance, and with their indirect sacrifices for increasing the payrolls of Labour and the reduction of the unemployed. On the whole, conditions in rural areas have perceptibly improved, though those in urban places have not yet.

The N. R. A. is making modifications in its policy, more specially in price-fixing. Minimum prices are to remain ; but, selling prices will not be fixed under its codes.. Above the minimum, free price competition can prevail.

Mr. Al Smith's attack on the public works programme as "an Alibi for incompetents," has been effectively silenced by the Public Works Administration claiming to have returned 1,183,267 men to work.

For the States, the coming Christmas will be a gala Christmas. The Administration has permited imports of liquors from foreign countries for a period of four months. The treasury has already received applications to import 12 million gallons of spirit and 6 to 7 millions of wine. A further concession is given in that the December and January quotas will be permitted to enter in December, in order to meet the Christmas holiday demand.

Progress is indicated in several directions. Meat sales have increased by 6½ per cent. over September figures. They were the highest since the previous October. As a result of the improvement in this line, Swift and Company, Chicago meat packers, have been able to declare a quarterly dividend of 12½ per cent. per share, the first payment, since July 1932.

Wool and Steel show a good record. According to the *Iron Age*, steel production was at 28 per cent. of capacity during the last week, compared with 27.5 per cent. for the week previous.

Wool consumption during October totalled 51,037,000 pounds, compared with 50,40,700 pounds in September. In this line, dividend or interest payment in October show a sharp increase to 556,100,000 dollars, as against 412,900,000 in September.

Automobile sales promise a bright future.. The sales of passenger cars during November are expected to reach 124,000. Motor manufacturers are of the opinion that the next three months will prove to be the best first quarter since 1931. Nash Motors, in paricular, have announced to place a special low-priced model on the market within the next few weeks.

U. S. Exports have increased by 21 per cent. in October, compared with September, while imports have only increased by 3 per cent. The total favourable trade balance for the month was 43 million dollars. The entire surplus is not due to the seasonal influence. The major part of it is due to the depreciation of the dollar. The year's exports, to October 31, totalled 1,008,507 tons compared with 484,492 tons for the first ten months of last year.

All these trends clearly prove the early return of better times. Some indications which would otherwise be valuable, are suppressed for one reason or another. It is understood that a number of corporations are ready to receive dividend payments, but are waiting till next year, in order to avoid pay-

THE GHUSICK & MUSLIA COLLIERIES LIMITED.

NOTICE

is hereby given that the Fifty-fourth Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 29th day of December, 1933, at 3-0 p.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 22nd to the 29th December, 1933, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 14th December, 1933.

Air Mail Week

ment of the existing 5 per cent. tax which is scheduled to lapse on January 1.

The R. F. C. is to purchase 5 million dollars of capital notes in the Toledo Trust Company. This will bring the total industrial advances of R. F. C. to 270 million dollars. It has received 800 applications up to date, from industrial concerns for financial assistance ; and 650 have been authorised.

In view of the beginning of improvement in production and distribution, the Federal deficit, though increasing, slowed down its pace. It now stands at 7,589,000,000 dollars at the monthly rate of pace, at present, of about 115 million dollars.

FRANCE

PROSPECTS OF CHAUTEMPS' MINISTRY

Despite the complacency of the general public in France's frailty for repeating political crisis, the Chautemps Government promises to fulfil the truth of France's capacity occasionally to lapse into stable government. The Sarraut Government was inveigled into wrong strategy, partly by the threat of a strike by the Civil Servants, and partly by the Socialists gesture to agree to the principle of cuts in the salaries of the Civil Servants. The disgust with the Civil Servants on the one hand and with the bargaining of the Socialist group on the other, drove the ministry into an uncompromising attitude. But the Sarraut Ministry has also alienated the sympathies of the Right groups by yielding, at the last moment to the overtures of the Socialists. The minimum salary of the Civil Servants for the cuts to operate was fixed by the Government at 10,000 francs per annum ; but, the Socialists demanded that it should be raised to 12,000. If M. Sarraut had stuck to the one, or the other, position, he would have had the whole-hearted support of either the Right or the Left, as the case may be. The Government, however, agreed at the psychological moment to raise the minimum to 11,000 francs. It is here that the Government was guilty of a tactical blunder. The compromise with the Socialists neither pleased them, nor could gain the support of the Right. Hence, the Right denied its support to the Government, and the Left opposed it, with the result that the Sarraut Government fell.

M. Chautemps essayed a coalition government, including anti-Blum socialists. But, the Flandin and other groups declined to associate with the Socialists. On the other hand, anti-Blum Socialists, under M. Renandel, fought shy of accepting the sweets of office. M. Chautemps was, therefore, obliged to resurrect the previous cabinet with but a few changes.

By all tokens, the Chautemps Government should survive the first few onslaughts, at least, in the Chamber. Its tenure of office will last long enough to remove the budget disequilibrium. The Finance Commission of the Senate, the other House of the French Parliament, passed, on November 28, a resolution calling for the immediate and integral re-establishment of budget equilibrium. According to the French constitution, it is the Senate that has to recommend the dissolution of the Chamber and the holding of fresh general election. The aforesaid resolution of the Senate's Finance Commission betrays impatience and alarm, in the Upper House, over the Parliamentary situation. In all probability, another ministerial crisis may be the signal for fresh

The Socialists will, therefore, be more lating for sometime at least. M. Chau- may have profited by the lessons of other Prime Minister's defeat, and may not be meticulous about the minimum limit for cuts. As the Sarraut Ministry agreed to 11,000 franc limit M. Chautemps may go one better by acceding to the Socialist demand for 12,000 franc limit. Another cause of sobering effect on the Socialists is the attitude of the Senate, which has always stood for more economies than larger taxation. Hence, both the Government and the Socialist Opposition have good cause to co-operate, in order to avoid fresh elections and produce the rehabilitation of State Finances, balanced as between economies and taxation.

In this connection, it is worthy of note that the extreme individualism of French political thought is responsible for the existenc of a large numbber of political parties, barely distinguishable from one another, on account of the subtle niceties of their respective doctrines. The existence of so many groups in the Chamber has led to constant Group-Fission, which largely obviates the necessity for fresh elections. This truth is well illustrated by the fact that a dissolution of the Chamber, at the instance of the Senate, happened so long ago as 1877.

Tax Evasion

Granted a longer tenure for the Chautemps Ministry, the Government will make good the gap in the economies, caused by the raising of the minimum limit for cuts in salaries to 12,000 francs per annum, by tightening up the screws on tax evasion. Especially in the south and west of France, namely, in the agricultural Departments, tax evasion has developed into a speciality. In these areas, there are more motor car owners than income-tax payers. The income-tax exemption level is 10,000 francs a year. Hence, it may be asked if to own or run a car is possible for incomes of 10,000 francs or less a year. It is estimated that there are not less than 60,000 motorcar owners, who evade income-tax payment. The French laws have given ample powers to Revenue authorities to compel the declaration of motor ownership, as part of the ordinary compulsory income-tax declaration. The inference is that the Revenue authorities are either corrupt or inefficient. In either case, they have forfeited the sympathies of the general public. Hence, a strike by the Civil Servants against cuts in their salaries will not evoke country-wide sympathy.

There is, however, a loophole for the evaders of income-tax payment. French bonds, known as the 1925 Fours, are exempt from general income-tax and entitled to supplementary interests, provided the sterling rate on Paris rises above 95. The 1925 Fours are, therefore, in special favour, as the public believes in the possibility of an eventual depreciation of the franc against sterling. The bull speculation in 1925 Fours will naturally depress other national funds, thus possibly scaring away subscribers for fresh loans, which may be required by the Government for consolidating floating debt, and for financing capital outlays. It may also damp the ardour of subscribers willing to renew National Defence Bonds and Treasury Bills. It is to be surmised that the Government is fully aware of this difficulty, and will evolve some measure by which to foil the attempts of tax evaders, as well as to encourage subscribers for fresh loans and for renewals of Treasury Bills.

New Loan Issue

The Treasury is in need of funds for meeting its heavy expenditure during the close of the financial year. Partly because of the fluctuation in the franc-sterling exchange and partly because of the French shyness to ask for a fresh sterling credit, so soon after the repaymemnt of the last credit, the French Government has made an issue of Treasury Bonds for 1,475,000,000 fancs at 5 per cent. at 97.

FIRE INSURANCE IN U. K. IN 1932

The fire insurance business in British fire offices after reaching its maximum height in the year 1929, is gradually declining since then. During the year 1932 this business has received a further set back compared to the previous year. The trading profits in all the British fire offices for the year at £1.47 millions is £84,000 less than in 1931 and the percentage of profits to premium at 2.7 is the lowest recorded since the year 1901 when it was 1.9. The total premium income of the year amounted to £54.19 millions as against £56.43 millions in last year, the claims paid amounted to £28.66 millions (52.3%) showing a decrease of £900,000 while the expenses of management and commission amounted to £24.71 millions (45.5%) revealing a decline of £832,000.. It may be seen that the actual surplus amounted only to £821,000, but after adjustment of the premium reserves (that is by including 40% of last year's premium income to the present premium income and providing 40% of present year's premium income for the unexpired risks and deducting the claims and expenses) the trading profits disclosed was £1.47 mimllions. The following tabular statement shows the progress and the latter retardation of the fire insurance business of all the British Fire Offices.

(£s, 000 omitted)

Year.	Premiums	Claims		Expenses		Actual	Trading profits	
		Amount	Percentage	Amount	Percentage	Surplus	Amount	Percentage
1900 ...	21,123	12,759	60·4	7,191	34·0	1,173	794	3·7
1905 ...	23,728	11,388	48·0	8,384	35·3	3,952	3,869	16·2

1923 ...	58,632	29,605	50·5	23,893	40·7	5,134	3,720	6·3
1924 ...	59,311	30,274	51·0	24,792	41·8	4,245	4,276	7·3
1925 ...	62,304	31,255	50·1	25,340	41·4	5,209	4,177	6·7
1926 ...	62,655	31,384	50·2	25,054	41·4	5,217	4,369	6·9
1927 ...	62,195	29,600	47·5	26,492	42·5	6,103	4,369	10·3
1928 ...	62,538	30,331	48·5	26,359	42·9	5,313	6,422	8·2
1929 ...	62,707	32,471	51·7	26,141	41·6	4,095	2,976	4·7
1930 ...	59,577	31,668	53·1	26,474	44·4	1,441	2,725	4·5
1931 ...	56,433	29,565	52·3	25,541	45·2	1,327	2,311	4·1
1932 ...	54,194	28,664	52·3	24,709	45·5	821	1,465	2·7

The recent decline in fire insurance business of British Offices is mainly due to their considerable fall in business in U.S.A. It is a well known fact that a major part of the British fire insurance business is done outside United Kingdom and mainly in United States of America. The recent trade depression in that country and particularly the great retardation of building constructions there is the chief cause of the fall in the fire business of that country. While speaking to the shareholders of the London and Lancashire on this subject, Mr. F. W. Pascoe Rutter has said "In their excited progress they mortgaged the future, and by their elaborate mechanisation, so simplified the production of everything that they have been able to supply themselves and many other countries with much more than was required or asked for. And this haste in prolific output had its natural response in other countries, which, in self protection, were impelled to follow suit. It is the general apprehension in the states that all building construction has been greatly overdone, and that it will take quite a number of years for the structure of all kinds—manufacturing, storage, offices, etc.—which have been erected to catch up to the actual needs of the community. This violent retardation of building operations has had, and must still have its effects upon the use of still, etc. The most difficult field for British Insurance companies, at present is the U.S.A. and the sooner that country puts its house in order, the sooner and the more certain will be the return of British insurance companies to the haleyon times which we have been accustomed to." The tremendous fall of fire business in U.S.A. can be seen from a glance at the following figures of the Premium income in U.S.A. and trading profits in U.S.A. of British insurance companies during the last 4 years given in millions of dollars.

	Premium income	Trading profits
1929 ...	159	11.4
1930 ...	138	5.4
1931 ...	130	7.0
1932 ...	115	5.5

In spite of this gradual decline in fire insurance business, British insurance companies are strengthening their financial position by increasing their total fire funds and reserves year after year as will be seen by the accompanying table relating to Tariff offices which do more than 95 per cent. of the total business.

In millon pounds

——	Premiums	Fire Funds	Other Reserves	Ratio of total funds to prems. percentage
1926 ...	60·0	50·9	36·4	145·4
1927 ...	59·6	51·5	40·5	154·4
1928 ...	59·9	52·7	43·1	159·8
1929 ...	60·0	53·2	45·8	160·5
1930 ...	57·0	52·4	46·7	174·0
1931 ...	53·6	48·1	47·1	177·5
1932 ...	51·7	46·3	47·3	181·0

SOME PROBLEMS OF INTERNATIONAL ECONOMIC EQUILIBRIUM

By J. B. Condliffe

The Theory of International Trade

Economic theory—the apparatus which generations of economists have devised as a means of attacking the complex practical problems of economic life—has concentrated more and more upon the conception of equilibrium, a somewhat uneasy balancing of forces in the economic system. The conception is not entirely simple since it is obvious that only in a highly abstract sense can economic forces ever be thought of as attaining a position of balance to which they tend to return because of the action of counteracting influences set up by any departure from that balance. Moreover, the equilibrium that must be thought of ought rather to be described as an unstable, constantly shifting series of multilateral equilibria in which an almost infinite series of changing factors and forces are held in loose relationship. The conception is further complicated by the fact that much of the interest and practical importance of economic analysis lies in the shifting of the positions of equilibria that are not only incidental to, but are the actual processes of, economic change. Nevertheless, for all its difficulty and, in a certain sense, its unreality, the conception has proved a very powerful instrument of analysis if only because it emphasises so strongly the multilateral and interdependent nature of the causation that must be reckoned with in all economic phenomena.

The most developed applications of the conception are naturally to be found in the theory of pricing which is now fairly generally accepted by all schools of economic thought. In the working out of this theory of prices, which quite clearly must be the heart of any system of theoretical economics, there has, not unnaturally, been a strong tendency to start from the simple assumption of a single market in which competitive forces can be more readily analysed. And, while the application of the theory to more realistic conditions has led to the recognition of important elements of friction, which, in practice, complicate the actual processes of pricing, more attention has been paid to the time than to the space factors which must be reckoned with. Less account has been taken of the geographical distribution of markets and the factors entering into local variations of prices than of the complications of pricing caused in time by the capitalistic processes of production.

If this is true of the theory of prices itself, it is even truer of the analysis of the economic phenomena that are both causes and consequences of price changes. Indeed it is hardly an exaggeration to say that economic theory remains predominantly national in its conceptions in the sense of proceeding largely upon the tacit assumption that economic phenomena can be studied as if they arose in units of national economic organisation, the pattern of which is usually thought of in terms of highly developed industrial regions. The connections between these national units tend, in theoretical discussion, to be neglected or at least underemphasised.

This is largely because, while great progress was being made in the refinement of economic analysis from the point of view of the National Dividend and similar essentially nationalistic conceptions derived fairly simply from the assumption of a single competitive market, the discussion of international economic phenomena has until recently been mainly confined to a study of international trade, with emphasis upon the exchange of commodities rather than upon their prices and the reactions of price-bargaining on economic organisation in general. In this respect popular discussion, ill-informed and wrongly guided as it has often been, has been more realistic in its approach. Not content with generalisations about the balancing of imports and exports or the gains to a somewhat vaguely conceived world-community from international trade, it has concentrated upon such problems as the competitive importance of cheap labour, dumping, the migration of industries and unemployment resulting from trading developments.

It is a curious fact that in theoretical discussions of international trade and other international economic problems, little use had been made until very recently of the effective instrument of analysis which modern price theory had proved itself to be in discussions of national economic phenomena. The orthodox "Comparative cost theory" inherited from Ricardo and based essentially upon the long-discarded labour theory of value, was elaborated, modified and refined; but still formed the basis of most economic writing on the subject. It is, no doubt, possible, by ingenious and complicated reasoning, to develop that theory to the point where it can be used to explain the complex conditions of modern trade; but such reasoning is tortuous, repellent to the practical mind, and unnecessary. A much more direct and fruitful analysis of international economic problems can be made by approaching them, as in practice a business man does, by a consideration of prices and of the phenomena which determine, and in turn are influenced by, price-changes.

A succession of economists in the last few years have begun to apply modern price theories to the elucidation of international economic problems. The recently published work of Professor Bertil Ohlin on "Interregional and International Trade",[1] is the latest and most significant example. The keynote of his analysis is clearly struck in an introductory chapter in which he lays stress upon the space as distinct from the time aspects of pricing. Essentially his aim is to extend the accepted price theory by applying it to a consideration of the problems that arise, not in a single market, but in "a number of more or less closely related markets". In other words he extends the conception of equilibrium achieved through pricing to a wider range of phenomena than those of a single market, and in particular to international economic problems.

In so doing Professor Ohlin adopts the obvious and practical method, which all business men naturally use, of regarding international trade not as a separate phenomenon but merely as a more difficult variety of trade between domestic regions. He is thus able to begin from the simpler problem of regional trade, working out the principles which lie behind localisation of industries and the development of trade. Quite clearly the relative ease of transport, the comparative absence of governmental obstacles, and the homogeneity of the currency and credit systems, facilitating the transference of capital, organisation and skill to the regions most favourably situated in respect of natural resources, make the development of inter-regional trade easier to analyse than international trade. But the same type of analysis may be used to explain the more difficult and complicated problems. Just as any realistic discussion of domestic trade and prices is incomplete without adequate consideration of the grouping and regrouping of the factors of production and demand which are the ultimate determinants of price-changes, so it is necessary to go behind the surface phenomena of international trade and finance by extending the theory of prices to comprehend international as well as domestic factors. In other words, the dynamic economic forces at work must be regarded as arising in a series of intersecting equilibria set in space as well as time. At the present moment when international economic problems are more difficult and important than at any other period in recent history, it is particularly desirable that the theoretical apparatus available for their elucidation shall be as simple and effective as possible.

The Disruption of Currency Equilibrium

There are, perhaps, two principal reasons for directing special attention at the moment to the problems of international economic equilibrium. The first lies in the magnitude of the disequilibria that at present exist and the difficulty of adjusting them. The second lies in the fact that in any such adjustment it will prove exceptionally difficult to restore the confidence in exchange stability which alone made possible the continuous change and expansion of the pre-war world by the export of capital from developed to undeveloped areas, and by the equally important adaptations of markets.

In more normal times, for examples in the immediate pre-war period, the internationally accepted gold standard, working through the smooth operation of the foreign exchanges, could be regarded as discharging much the same functions as were discharged by homogeneous national currencies, so that trading and the continuous re-arrangement of factors of production involving, even, some transference of resources between, as well as within, countries, could proceed without undue disturbance. It is true that there were difficulties arising from the differences of national organisation, but these were not aggravated by extreme monetary instability. The various national currencies were kept in almost perfect equilibrium one with another and therefore national price-systems were readily and effectively

Topical Extracts:

linked. Since at that period there was much greater flexibility of prices, the maintenance of the national economic organisations as a whole in elastic equilibrium one with another was greatly simplified. It should perhaps be added that the pre-war gold standard, though international in form, was predominantly directed by decisions taken in the London Money Market. Great Britain was then a free trade country and acted as a central pool both for credit and for goods, absorbing and re-distributing the price movements that were incidental to developing world production and trade.

The magnitude of the changes in the economic organisation of the world that were carried through with surprising smoothness and efficiency are worth recalling. In the decades following the definite establishment of the gold standard as an international system in the seventies, there was a huge investment of capital in the development of overseas agricultural countries, in railways and in shipping. World trade and world prices for such basic commodities as wheat, meat, butter and many of the important minerals, were revolutionised and very drastic re-arrangements of national production became necessary. Moreover the remarkable gold discoveries in the Transvaal greatly affected the monetary side of the price equation. In retrospect the relative ease with which the economic organisation of the countries affected was adjusted to such large and far reaching changes as those caused by the opening up of new wheat lands, the introduction of refrigeration and the rapid development of the newer countries, appears quite remarkable.

These adjustments tended at the time to be taken for granted because stable monetary exchanges provided a reliable medium by which price influences could be transmitted from one national unit to all the others. The complexity of the adjustments forced upon national organisation by the new international developments was disguised by the fact that the whole price system of each country was, as it were, gathered up vis-a-vis other countries in the exchange rates, which the working of the gold standard rendered stable. Any external change was transmitted by pressure upon the exchanges, and the subsequent currency adjustments that were necessary diffused the effect of such change over the whole economic system of the country concerned. Thus external factors such as the competition of cheap imported foodstuffs caused a drain upon gold reserves, which had to be met by domestic policies, which at the same time facilitated the expansion of manufactures for export and allowed domestic agriculture to suffer. These developments were of course clearest in Great Britain, which more than most other countries accepted the consequences, as it assumed the direction, of international trade and investment.

At such a time as the present, however, when over a great part of the trading world the stability of foreign exchanges based on gold currencies has been replaced by fluctuating ratios between paper standards, the complexity of international price competition is revealed more clearly. As long as the exchanges were fixed, adjustments to changing world conditions involved adaptations of national organisation that were readily effected through the currency system. When the exchanges are free such adaptation is more difficult and the lessened flexibility of prices which is in any case a characteristic of post-war economies is further stiffened in resistance to external forces, which therefore are reflected in exchange instability. The common statement that the exchanges should be allowed to find their 'natural level' is simply a demand that, instead of various national prices adjusting themselves to external conditions, the currency relations shall be so arranged as to avoid the necessity for domestic reorganisation. It does not need much reflection, however, to see that if this attitude is taken by all countries there can be no real and lasting adjustments to changing world conditions. The variant statement, which is sometimes made, that a currency should be allowed to find 'its own level' is open to two interpretations, which reveal the difficulty of the problem. If 'its own level' is meant to be the level at which no great change is necessary in national relative price-levels or in national economic organisation, the conception is too simple. One is reminded of the schoolboy's answer to a question concerning the constitutional powers of the Crown—'The king can do as he likes, subject to the consent of others.' If, however, the term means a true condition of equilibrium, taking account of the necessities of every nation, it is difficult to see how, unless it be universally admitted that the previous exchange ratios were intolerable for a particular country, any mere change in that ratio will alter the essential problem of equilibrium.

In point of fact this gdowing inflexibility of national price and productive systems was one of the major causes of the breakdown of the international gold standard. Post-war conditions were such as to demand considerable alterations and re-arrangement of the economic order in many countries. Some had been greatly impoverished and moreover had incurred heavy external burdens of debt, political and economic, others had lost markets which had been taken from them by more vigorous and less pre-occupied rivals during the war period, still others had become great creditors without assuming the consequences of the creditor position.

Moreover, the balance between national economies, partly because the previous period of unstable exchanges had allowed their price-systems to get out of adjustment, was not improved by the return to the gold standard from 1933 onwards. Important price-groups in each country had got so out of relationship with the corresponding groups in other countries that it was very difficult to find exchange rates that would be exactly right for all sorts of prices. It is commonly said that Great Britain and Italy stabilised too high and France and Belgium too low. The comparison intended is probably between the average levels of wholesale prices in each country; but that was by no means the only factor that entered into the subsequent strain on international equilibrium. The relation between wholesale prices, the cost of living and wages, for example, was important in each country. In any case, what might have been a suitable level in 1925, involving a moderate measure of deflation for Great Britain, assumed a very different aspect when the French currency was later stabilised at a level that drew capital to France and gave French exports an advantage in world markets. Even then the advantages of stable exchanges might have been retained if it had proved possible to carry through with sufficient rapidity the price adjustments that were needed to get the national systems into harmony on the new basis. It may be that the international political transfers necessitated by the reparation and war debt payments would alone have called for such drastic adjustments as were, in fact, impossible.

In the event, the resistance to price changes, together with the strain imposed on the currency system by external factors, caused a very widespread disruption of the newly restored exchange equilibrium. As the exchange relation between currencies was broken, the various elements in the national price-systems, no longer subject in the same way to international influences, naturally developed along divergent lines. This indeed is what is commonly meant by "the relief gained from the abandonment of the gold standard." The prices of goods that were in direct competition with imported goods, and the levels of wages in countries that left the goldx standard, were relieved from pressure, and in the same way interest rates were no longer forced up by the constant drain of capital abroad. Whatever the net result of such changes may have been—and this is disputable in most countries—it undoubtedly complicates the task of finding an exchange level at which a currency can again be stabilised and kept in equilibrium with other currencies.

It is not possible in a short article to deal exhaustively with all the factors that have rendered so many important elements of the national price-structures less flexible on the post-war period; but attention may be called to one or two of them. The greatly increased volume of indebtedness, both national and international, and the heavier taxation to which it gave rise, is one obvious difficulty. A larger proportion of what may be termed national overhead costs became fixed and invariable. The strong tendency for private international finance to take the form of lending upon fixed interest securities rather than equities, reinforced the inflexibility caused by heavier public debts. The difficulty, if not impossibility, of reducing such charges threw a heavier burden upon other elements in the national income in many countries where reductions were necessary if exchange equilibrium was to be preserved.

In the same way the growing intervention of the State in economic activities, by direct management of important industries such for example as transport and other public utilities, by support given directly or indirectly (through unemployment subsidies) to existing wage-rates, by subsidies, bounties, preferences and protection to threatened industries, all contributed to a greater inflexibility of the price system. Not least among these activites of the State must be reckoned the recrudescence of tariff protection. Banking policy also, supported in some cases by central bank policies of cheap credit, aimed at buttressing and extending industries that were difficult to preserve in face of international competition.

The net effect of all such resistance to adaptation at a time when there were greater strains than ever before upon existing international economic equilibrium, proved finally to be intolerable and one country after another abandoned the attempt to maintain its exchange parities. In so doing a definite choice—involuntary after a certain point had been reached—was made between accepting the necessity for national reorganisation and breaking connections with the international system.

The Costs of Disequilibrium

During the crisis the choice may have seemed inevitable; but the costs of a broken international system soon became apparent. The most obvious is found in the diminution of international trade—with all its attendant consequences of economic disorganisation and lower living standards. In a world where the gifts of nature are so unevenly distributed, the piling up of obstacles to their commercial interchange cannot but reduce prosperity. But there are other and even more fundamental problems created by the recent flight from international to national

Tropical Extracts :

conceptions of organisation. These problems arise primarily from the absolute necessity of growth and development in many countries. If we lived in a static world, the disruption of international equilibria, making intercourse and trade between the nations more difficult, would be serious enough, but in a world with uneven population pressures and such marked differences not only of raw material, but of capital equipment, it is a disaster.

Perhaps the best illustration of the need for development is presented by the position of Japan. Upon an area less than that of the British Isles, two-thirds of which is uncultivable, and poorly equipped with the basic materials of modern industrial development, an energetic and ambitious population with a rising standard of living already numbers over sixty millions and is increasing at the rate of over a million a year. It is true that there are certain signs that before long this rapid rate of increase will tend to flatten out; but competent statisticians estimate that the babies already born who in the next twenty years will add at least ten millions to the working population. If the standard of living is to keep on rising as it has done in recent generations, and as popular education will demand, or even if it is to be kept at its present level, Japan must develop, and develop rapidly, along industrial lines. Given the poverty of her resources, this means increasing access to raw materials, the accumulation of capital, and above all access to widening markets, and these are possible only in an international system in which there is such an equilibrium between national economies as to facilitate the processes of development.

What is true of Japan is true of many other relatively undeveloped but progressive communities. They need capital, trading facilities, and organisation to develop their resources and provide for their expanding populations. If these are not forthcoming the result will not only be a poorer world; but one in which the uneven and inequitable pressures of population upon the means of existence will be liable to lead to discontents and explosions. The fact that the world is a developing organic whole, knit together by increasing freedom of communications, is a compelling reason for seeking to restore equilibrium between its constituent members. But the equilibrium to be restored must be sufficiently flexible to allow for change and growth. It is not possible permanently to maintain the status quo either by measures of economic isolation or by patching up an equilibrium that attempts to preserve existing national organisation against outside competition.

The Problems of Restoration

The validity of this general reasoning is so obvious as not to need any great stress. But when one turns to the practical problems involved in restoring the broken international system, their complexity is best appreciated if they are approached along the lines of Professor Ohlin's analysis, rather than by way of the older theories of international trade. The major international economic problems confronting the present generation appear to be: the restoration of an effective, co-operative international monetary standard, the evolution of methods whereby a greater degree of free interchange of commodities may be achieved, and the resumption, upon cautious and probably somewhat different lines, of that international investment which in the past has proved a vital factor in economic progress. In all of them cooperation between national economic units is an indispensable condition of successful solution.

The most immediate problem is obviously that of restoring a common measure of value by linking national currencies once again in the gold standard. Only by establishing such a common monetary unit will it be possible to establish cooperative processes that will not only enable countries to trade, but will facilitate necessary economic changes. But it is not easy to restore exchange stability, nor to establish confidence in whatever rates may be chosen. The calculations that should be made in establishing the rates of exchange likely to be most durable are comparisons of prices involving consideration of all the factors entering into the economic organisation of the countries in question, rather than of the balances of trade. Nor is a simple comparison of wholesale prices adequate. The various elements of the price structure, wages and other costs, retail prices, rates of interest, and the factors likely to influence them, must be taken into consideration. It is likely indeed that no precise calculation of the ratio of exchange even between two currencies will exactly suit all the circumstances. The elements of the national price systems have flown apart and the process of gathering them together again into a stable relationship with other systems must probably be one of trial and error. In other words experimental de facto stabilisation will give an opportunity of testing whether a given rate can be maintained during a sufficiently long period for the different sorts of national prices to be brought into harmony with it.

The experience of the post-war stabilisation, however, proved that it was highly dangerous to fix bilateral ratios that were likely to be affected by the rates later fixed for other currencies. Any future stabilisation must be multilateral, at least as between the major currencies. Fortunately the recent alignment of most of the world's currencies into a small number of major goups is likely to reduce the difficulty of such a simultaneous experiment.

The achievement of monetary stability, however, difficult as that is likely to prove, is only the beginning of the task of restoring international economic equilibrium. A common monetary standard gives the opportunity of comparing prices and testing the stability of the new ratios between the national price systems. Its operation will immediately bring intensified international price competition, no longer hampered by the possibility of exchange fluctuations. Not only goods but capital—at least on short-term—will move more freely. All the forces working in the direction of economic change and reorganisation will become active once more. If one may adopt the approach used by such recent writers as Ohlin and Haberler, the present tendency to impose heavier trade restrictions and exchange instability may be viewed as the equivalent of space barriers pushing national markets further apart and rendering price comparisons more difficult. The distances between import and export points of commodities have been widened. The restoration of fixed exchanges might well precipitate short-term capital movements that would be difficult to handle unless more flexible commodity price arrangements provided the means of transferring them.

It is fortunately true that, in the interim, some of the most disturbing causes of disequilibrium, such as the reparation and war debt payments, may have finally disappeared or have been attenuated to manageable proportions. There still remains, however, a very substantial problem of non-political international debt, much of which is at present in a state of partial or complete suspense. There remain also the barriers to the free movement of goods and the difficulties of creating an adequate degree of new international investment. The restoration of exchange stability would provide an opportunity for solving these great problems; but not a solution. Indeed, if investment should again commence as it did after 1925, without a freeing of trade and without such flexible adjustments of national prices and reorganisation of national economies as would permit its steady repayment, exchange stability would probably not last very long.

The pre-war world managed not only to keep a reasonably stable equilibrium between national economic systems, but also to allow for considerable change and growth, mainly by allowing the forces of competition, working price changes, to produce their natural effects upon national economies. The post-war world has a vastly more difficult problem, not only because, for the first time, it is necessary to organise a truly international monetary and credit system, but because competition and free enterprise, with all its flexibility, is now somewhat discredited and because national governments are apparently more willing to use the State machinery to protect 'national' interests from external competition. It is too soon yet to estimate whether the growing tendency towards State regulation and control will end in something approximating national trade monopolies and quota systems based upon governmental bargaining, or whether there will be a reversion to freer competition. It is conceivable that in the future the United States may be forced by the logic of its own internal development to take somewhat the same rôle as was played by Great Britain in the late 19th century, as a reservoir of credit and goods; but such a development can hardly be expected immediately. For the years that lie immediately ahead, trade negotiations on a bilateral basis seem the most likely development, but such negotiations are laborious and not likely to free trade very rapidly.

In the field of international finance there looms, beyond the immediate problems of volatile short-term money and of much long-term debt that weighs heavily upon the resources and transfer capacities of particular countries, a whole set of problems connected with the resumption of capital investment. It seems improbable that investment by the method of long-term fixed-interest loans to governments or banks can be safely resumed on any large scale; but private investment in industrial equities requires a degree of confidence in international stability that is at present lacking.

It would be idle to pretend that what has been said above is anything more than a superficial survey of a few of the major problems of world economics; but enough has been said to indicate that the restoration of international economic equilibrium and its maintenance when restored will present difficult and urgent problems for many years to come.

Index—Stockholm.

SIR ALEXANDER MURRAY, C.B.E.

We are informed by Messrs. Thomas Duff & Co., Ltd., that Sir Alexander R. Murray, C.B.E., has joined the Boards of Messrs. Thomas Duff & Co., Ltd., Samnuggur Jute Factory Co., Ltd., Titaghur Jute Factory Co., Ltd., and the Victoria Jute Co., Ltd.

STATISTICAL INFORMATION

FOREIGN TRADE OF BOMBAY.

The aggregate value of the foreign trade of Bombay—Imports and Exports—for the month of October, 1933, amounted to Rs. 9.17 crores, showing a decrease of Rs. 1.27 crore, or 12 per cent., as compared with the figures for October, 1932, and of Rs. 6.13 crores, or 40 per cent., as compared with those for October, 1931. The decrease of Rs. 1.27 crore is entirely due to reduced shipments of gold. Imports of merchandise and silver and exports of both Indian produce and foreign merchandise showed increases.

Imports of merchandise amounted to Rs. 4.28 crores, showing an incraese of Rs. 44.7 lakhs, or nearly 12 per cent., and of Rs. 76.78 lakhs, or nearly 22 per cent. over the figures for October, 1932 and 1931, respectively. The increase of Rs. 44.7 lakhs is chiefly due to larger arrivals of machinery and millwork (+Rs. 14.12 lakhs), cotton, raw, (+1,415 tons and +Rs. 12.7 lakhs), alizarine and aniline dyes (+Rs. 10.01 lakhs), kerosene ail (+nearly 2 million gallons and +Rs. 5.13 lakhs), instruments, apparatus and appliances, etc. (+Rs. 4.48 lakhs), wool manufactures (+Rs. 4.29 lakhs), motor cars, including motor wagons, cycles and parts thereof (+Rs. 4.15 lakhs) and artificial silk yarn (+over ½ million lb. and +Rs. 3.41 lakhs). Imports of rubber manufactures, animals, living, cotton manufactures and tea also increased by about Rs. 2.5 lakhs each. On the other hand, noticeable decreases were recorded in the imports of cotton piecegoods (−over 9½ million yards and −Rs. 15 lakhs), cotton twist and yarn −(over ½ million lb. and −Rs. 5.59 lakhs), sugar (−5,420 tons and −Rs. 5.39 lakhs) and artificial silk piecegoods (−over 3½ million yards and −Rs. 5.29 lakhs). Imports of gold amounted to Rs. 2.78 lakhs as against Rs. 7.67 lakhs in October, 1932, and Rs. 29.08 lakhs in October, 1931, and those of silver to Rs. 13.43 lakhs against Rs. 19,100 and Rs. 23.3 lakhs, respectively.

Exports of Indian produce were valued at Rs. 1.85 crore showing a rise of Rs. 34.24 lakhs, or nearly 23 per cent. over the figures for October, 1932, but a fall of Rs. 7.03 lakhs, or nearly 4 per cent., from those for October, 1931. The rise of Rs. 34.24 lakhs is chiefly due to increased shipments of seeds (+36,378 tons and +Rs. 39.79 lakhs), hides and skins, raw and tanned (+Rs. 4.07 lakhs), oils (+Rs. 2.34 lakhs) and wool, raw (+nearly ½ million lb. and +Rs. 2.07 lakhs). Exports of cotton, raw, on the other hand, decreased by 1,908 tons in quantity and by Rs. 21.39 lakhs in value. Shipments of gold amounted to Rs. 2.66 crores, as against Rs. 4.87 crores in October, 1932, and Rs. 8.93 crores in October, 1931, and those of silver to Rs. 1 lakh against Rs. 1.23 lakh and Rs. 11.89 lakhs, respectively.

Re-exports of foreign merchandise were valued at Rs. 20 lakhs as against Rs. 14.37 lakhs and Rs. 29.58 lakhs, respectively.

The trade statistics for the first seven months of the current official year show a contraction of Rs. 7.39 crores, or over 21 per cent., and of Rs. 6.01 crores, or 18 per cent., in impotrs, but an improvement of Rs. 2.48 crores, or over 5 per cent., and of Rs. 13.01 crores, or nearly 39 per cent., in exports, as compared with the figures for the corresponding months of the years 1932-33 and 1931-32, respectively. Imports of gold declined by Rs. 9.97 lakhs and Rs. 66.61 lakhs to Rs. 35.25 lakhs and those of silver by Rs. 62.72 lakhs and Rs. 1.55 crores to Rs. 23.69 lakhs. Imports of merchandise also fell by Rs. 6.66 crores, or 20 per cent., and by Rs. 3.3 crores ,or over 12 per cent., respectively, to Rs. 26.27 crores. The fall of Rs. 6.66 crores from the figures for the same period of 1932-33 is accounted for mainly by smaller arrivals of cotton, raw (−Rs. 3.28 crores), cotton piecegoods (−over 43½ million yards and −Rs. 98.83 lakhs), cotton twist and yarn (−over 5½ million lb. and −Rs. 58.95 lakhs), silk, raw and manufactured (−Rs. 51.64 lakhs), artificial silk piecegoods (−nearly 28 million yards and −Rs. 46.25 lakhs), kerosene oil (−over 3 million gallons and −Rs. 42.17 lakhs) and metals and ores (−Rs. 39.33 lakhs). Arrivals of motor cars, including motor wagons, cycles and parts, etc., and machinery and millwork ,on the other hand, increased by Rs. 33.72 lakhs and Rs. 32.36 lakhs, respectively.

Exports of gold were valued at Rs. 23.45 crores as against Rs. 32.22 crores and Rs. 10.58 crores and those of silver at Rs. 6.77 lakhs against Rs. 10.57 lakhs and Rs. 1.17 crore. Shipments of Indian produce amounted to Rs. 16.5 crores, showing a rise of Rs. 6.08 crores, or 58 per cent. over the figures for the corresponding period of 1932-33, but a fall of Rs. 3.15 crores, or 16 per cent., from those for the same period of 1931-32. The rise of Rs. 6.08 crores is almost entirely due to increased shipments of cotton, raw (+65,075 tons and +Rs. 4.02 crores), seeds (+132,272 tons and +Rs. 1.51 crore) and wool, raw (+over 5½ million lb. and +Rs. 22.81 lakhs).

Re-exports of foreign merchandise were valued at Rs. 1.2 crore as against Rs. 99.53 lakhs and Rs. 1.81 crore, respectively.

FOREIGN TRADE OF KARACHI

The statistics of the foreign trade of the port of Karachi for November, 1933, issued by the Collector of Customs, show that the total value of imports (merchandise) amounted to Rs. 1.16 crores, a decrease of Rs. 38 lakhs and that of exports to Rs. 69 lakhs, a decrease of Rs. 3 lakhs as compared with the figures for November, 1932. The progresssive totals for the eight months ending November, 1933, show a decrease of Rs. 2.91 crores or 25 per cent. under imports, but an increase of Rs. 82 lakhs or 13 per cent. under exports.

Comparative figures of the principal imports and exports for November, 1932 and 1933 are given below:—

IMPORTS

In November, 1933	
Cottons manufactures	21,43,437
Oils	3,65,076
Wollen goods	3,81,409
Sugar 7,358	7,43,963
Vehicles	5,60,927
Cotton, Twist and Yarn	5,546
Machinery and mill work	18,08,595
Liquors	4,96,371
Metals and ores	9,40,779

The decrease under cotton manufactures occurred in receipts of all the three main sub-divisions of piecegoods, *viz.*, grey, white and coloured. Imports of grey goods amounted to 1¼ million yards valued at Rs. 1.5 lakhs as against 2½ million yards valued at Rs. 3 lakhs, while those of white and coloured goods totalled 7⅜ million yards valued at Rs. 13 lakhs and 2½ million yards valued at Rs. 5 lakhs as against 13½ million yards valued at Rs. 20 lakhs and 5½ million yards valued at Rs. 11 lakhs, respectively, in November, 1932. The total imports of cotton piece-goods during the eight months ending November, 1933, amounted to 105⅜ million yards valued at Rs. 1.75 crores, showing a decrease of 49 per cent. in quantity and 52 per cent. in value as compared with the corresponding period last year. The share of the United Kingdom in eight months ending November, 1933, was 80 million yards valued at Rs. 1.39 crores, a decrease of 48 per cent. in quantity and 50 per cent. in value while that of Japan was 25½ million yards valued at Rs. 35 lakhs, a decrease of 45 per cent. in quantity and 53 per cent. in value as compared with imports in the corresponding period of 1932-33. Imports of woollen goods decreased as the result of smaller arrivals of piece-goods from France. The decrease under oils was mainly due to entire absence of imports of kerosene oil during the month under report as against an import of nearly 1½ million gallons valued at Rs. 6 lakhs in November, 1932. Smaller despatches from Persia also caused a decline of Rs. 1.5 lakhs in receipts of fuel oils. Reduced arrivals of beet sugar from the United Kingdom mainly accounted for the decrease in imports of sugar. The total imports of sugar during the eight months ending November, 1933, amounted to 45,690 tons as against 64,469 tons in the corresponding period last year. The decrease in imports of vehicles was most noticeable in receipts of motor cars from the United Kingdom. Imports of machinery on the other hand, showed an improvement which occurred mostly in receipts of sugar machinery from the United Kingdom and other sorts of machinery from Germany.

EXPORTS

In November, 1933.	Quantity	Value
Cotton, raw	5,432	23,75,037
Wheat flour	835	89,668
Wheat	80	6,799
Hides, raw	52	25,568
Barley	4	340
Wool, raw (Indian and foreign)	2,005	14,33,142
Skins, raw	673	6,79,668
Rapeseed	4,819	5,29,852

The decrease in exports of cotton was largely due to Japan having made no purchases during the month under report as against a purchase of 1,376 tons valued at Rs. 7 lakhs in November, 1932. Germany and Belgium also took less, but the United Kingdom took more. The total quantity of Indian cotton exported during the eight months ending November, 1933, was 83,571 tons (467,998 bales) as against 56,285 tons (315,193 bales) in the corresponding period last year. Exports of wool, on the other hand, showed an increase which occurred in shipment to the United Kingdom and the United States of America. Of the total quantity (*viz.*, 4,800 tons) of rapeseed exports during the month, the principal amounts went to Italy (1,060 tons), the United States of America 1,000 tons), France (760 tons), Germany (700 tons) and the Netherlands (600 tons).

COMPANY REPORTS

RANEEGUNGE COAL ASSN., LD.

Synopsis of Balance Sheet:

Total ...	37,34,905	Total ...	37,34,905

Extracts from Directors' Report:

Report.—For the half-year ended 30th September, 1933.

The gross profit transferred to Profit and Loss Account is Rs. 2,68,958-3-0.

After providing for current Depreciation, Cesses, Income and Super Tax, Commissions and usual Bonus to Staff, in all absorbing Rs. 1,49,615-6-3, there remains at credit of Profit and Loss Account, after taking into account the balance brought forward from the last Account, the sum of Rs. 1,39,257-5-5, out of which we recommend that a dividend be paid of Re. 1 per share, equivalent to a rate of 20 per cent. per annum. This will dispose of Rs. 1,20,000, leaving a balance of Rs. 19,257-5-5 to be carried forward.

We regret that since our last report, little progress has been made in regard to the litigation with the Tata Iron & Steel Co., no decision having yet been reached in the suit before the Bombay High Court.

Raisings, Despatches and Stocks are as follows:—

	Half-year ending 30th Sept., 1932. Tons.	Half-year ending 30th March, 1933. Tons.	Half-year ending 30th Sept., 1933. Tons.

Extracts from Directors' Report:

Revenue Account.—A trading profit of £65,494 13s. 11d. is shown, as compared with £68,456 7s. 10d. in the previous year.

The low prices ruling for Kerosene in India, to which reference was made in the last Annual Report, have persisted throughout the year, and prices for Benzine fell considerably towards the end of the 12 months. Intense competition from Russian oil and the surplus production of other fields has continued, while there has been no relief from the burden of taxation imposed upon the indigenous oil industry.

Profit and Loss Account.—Adding to the gross profit Interest, Profit on Sale of Securities, and Sundry Receipts, and deducting Sundry Charges, Debenture Interest, Depreciation Income-tax, and Salaries, a net profit is shown of £34,376 15s. 6d., which, with the balance from the previous year, makes the disposable profit £42,895 12s. 8d. There has been appropriated to Debenture Sinking Fund Account the sum of £41,562, and a balance of profit of £1,333 12s. 8d. remains.

The Directors regret that no dividend is possible for the year under review.

Balance Sheet.—A portion of the amounts which have hitherto been placed to the credit of the Sinking Fund Account, on the debit side of the Balance Sheet, has been utilised in the present Balance Sheet for the purpose of reducing the book value of the Company's oil lands and interests in oil properties.

Capital Expenditure.—The year's expenditure on Capital Account amounted to £20,517 17s. 3d.

Depreciation.—A sum of £23,317 6s. 4d. has been written off Refinery and Field Assets, calculated at the same rate as last year.

Production.—The total production of crude oil shows an increase over the previous period. This is due to the deepening of certain of the wells in Yenangyaung which came into production from a new horizon with a good initial yield.

The Rangoon Oil Company, Limited.—The Directors of the above Company were unable to declare a dividend for the year to 31st March, 1933.

The British Burmah Deep Drilling Company, Limited.—Special equipment required to deal with the difficult conditions encountered in drilling to the deeper issues has been provided, and work is proceeding with the object of reaching a depth of some 5,500 feet, in order to test the value of the oil sands to that horizon.

Salay Oil Lands, Limited.—Drilling for the purpose of determining the structure was completed during the year and enabled to site for a deep test well to be selected. It has, however, been decided to postpone the heavy expenditure that will be necessary to complete the test of the area, until conditions in the Indian Oil Industry become more favourable.

Interests Outside Burma.—The development work undertaken in Germany in association with foreign interests has yielded to date a production of 1,700 tons of high quality crude oil, but further drilling will be required to prove the value for the properties secured.

The investigations into the possibilities of establishing an oil industry in South Africa based on the extraction of indigenous oil from Shale and Torbanite deposits in the Transvaal, have been satisfactory, and rights over extensive areas containing deposits of trobanite have been secured. Union Corporation Limited are participating jointly with the Company in the further investigation of the business, and their co-operation is of the greatest value.

Future Programme.—The world market conditions combined with high internal taxation, which has virtually removed the protection that the indigenous industry formerly enjoyed in India, continue to handicap the operations of the Company in Burma. The Board have decided that the Company's development programme must be drastically curtailed until conditions improve and again offer a reasonable prospect of a profitable return to justify further expenditure.—G. H. Wells, Secretary.

CAWNPORE TEXTILES, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	19,06,215	Block (net) ...	19,45,112

		Cash & Invests. ...	2,439
		Profit & Loss ...	1,42,468
Total ...	26,99,517	Total ...	26,99,517

Extracts from Directors' Report:

Report for the half-year ended 30th September, 1933, shows a profit on Revenue Account of Rs. 3,446-15-4.

This amount has been carried to Profit and Loss Account which now shows a balance at debit of Rs. 1,42,467-14-0.

There has been no improvement in the conditions of the Cotton Textile Industry. Prices obtainable for cloth continue on a very low basis and this has reflected unfavourably on the demand for Yarn for hand-weaving.

The Indian Government has not yet declared what measure of additional protection it is prepared to give Hosiery Manufacture against Japanese imports and in the meantime the Company is faced with increasing competition.

The Managing Agents have agreed to forego Rs. 1,500 per mensem of their allowance for the past half-year.

Raw Materials have been taken at cost and manufactured goods at or under market value.—H. A. Wilkinson, A. Hoon, E. M. Souter, N. P. Nigram, Directors.

MARSHALL, SONS & CO. (INDIA), LD.

Total ...	60,83,924	Total ...	60,83,924

Extracts from Director's Report:

Report for the year ended 30th June, 1933.

The Revenue Account shows a loss of Rs. 3,66,629-12-9, to which is added for Depreciation written off Rs. 73,581-15-0, total Rs. 4,40,161-11-9 and after adding the adverse Balance carried forward from last year of Rs. 4,42,893-9-9, an adverse Balance remains of Rs. 8,83,055-5-6.

During the period under review the business of the Company was still adversely affected by the depression in trade which continued throughout the year, but the result of the trading of the Company was better by Rs. 13,297-1-0 as compared with the previous year.

The Directors although they had already effected considerable economies in the working expenses of the Company fully realized that further retrenchment was necessary to meet existing trade conditions, and they have consequently taken drastic steps to reduce expenditure still further, the benefits of which will not be fully felt until the coming year.

Owing to the falling off in the volume of orders for machinery manufactured at Agarpara Works which is specially noticeable in the case of tea machinery for which the Works were primarily intended the Directors have decided completely to close them down until conditions improve and permit of a sufficient turnover being profitably dealt with at the Works.

In the meantime the activities of the Company will not be diminished on this account as arrangements have been made to obtain from the Company's associates in England supplies of machinery and spare parts.

The Directors do not anticipate it will be necessary to close down the Works for any considerable period as there signs of an improvement in the tea industry which should be reflected in an increased turnover for the company.—*J. Happer D. J. Dalgarno, O. M. Jatia, A. E. Mitchell, H. A. B. Hannay, H. Carey Moran, Directors.*

ELGIN MILLS CO., LD.

Total	...	66,47,343	Total	...	66,47,343

Extracts from Directors' Report:

Report for the half-year ended 30th September, 1933, shows a profit on Revenue Account of Rs. 1,52,145-9-11, add Credit Balance carried forward on 31st March, 1933, Rs. 41,359-0-11, total Rs. 1,93,504-10-10, deduct amount placed to Debenture Sinking Fund Rs. 25,000, amount placed to Depreciation Rs. 50,000, equal to Rs. 75,000, leaving a balance at credit of Profit and Loss account of Rs. 1,18,504-10-10, it is recommended that this amount be disposed of as follows: To payment of a dividend on the Preference Shares of 8 per cent. per annum for the two half-years ended 31st March, and 30th September, 1932, free of Income-Tax Rs. 88,000, Carry forward Rs. 30,504-10-10.

There has been no improvement in the condition of the Cotton Textile Industry. Prices obtainable for cloth continue on a very low basis and this has reflected unfavourably on the demand for yarn for hand-weaving.

Since the Mills reopened on 8th May the Labour has worked satisfactorily.

Raw Materials have been taken at cost and manufactured goods at or under market value.—*H. A. Willkinson, C. W. Tosh, Motilal, Directors.*

UPPER GANGES VALLEY ELECTRICITY SUPPLY CO., LD.

Extracts from Directors' Report:

Report for the half-year ended 30th June, 1933.

Mains.—Extensions of Mains have been carried out in Moradabad City, and in Bijnor and Chandausi.

General.—The following statement shows the progress of the undertaking:—

Half-year ended		No. of Connections	No. of Units sold	Revenues Rs.
30th June, 1931	...	664	370,077	72,955
31st December, 1931	...	933	501,740	92,440
30th June, 1932	...	1,164	606,966	1,10,858
31st December, 1932	...	1,443	704,095	1,19,916
30th June, 1933	...	1,757	1,005,006	1,51,167

Amendments to the existing agreement with Government in respect of the supply of energy have been arranged whereby the guarantee under which the Company are held liable for the purchase of a definite quantity of electricity has been reduced very largely in return for concessions in Agricultural and Water Pumping facilities to Government.

Accounts.—After providing for all charges including Rs. 9,966-9-1 on account of Depreciation writing off Rs. 10,000 against Interest on Capital during construction, preliminary expenses and brokerage on placing shares, placing Rs. 10,000 to Reserve for contingencies and adding Rs. 9,648-15-2 brought forward from the previous half-year, a balance of Rs. 8,537-1-3 remains to be carried forward to next half-year's accounts.

Mr. Leslie Martin being on leave in England did not sign the Accounts.—Martin & Co., Managing Agents.

Application has been made to the Government of Delhi and the United Provinces for the transfer to the Upper Jumna Valley Electricity Supply Company, Limited, of the License granted to Martin & Co. for the town of Shahdara.

Negotiations in respect of the Meerut Cantonment Supply are practically completed and the agreement is now before the Military Authorities for final ratification. Amendments to the existing agreement with Government in respect of the supply of energy have been arranged whereby the guarantee under which the Company are held liable for the purchase of a definite quantity of electricity has been reduced very largely in return for concessions in Agricultural and Water Pumping facilities to the Government.

Accounts.—After providing for all charges including Rs. 7,259-8-8 on account of Depreciation and writing off Rs. 13,718-0-6 against Interest on Capital during construction and brokerage on placing shares and adding Rs. 5,759-10-8 brought forward from the previous half-year, a balance of Rs. 3,206-9-11 remains to be carried forward to next half-year's accounts.

Mr. Leslie Martin being on leave in England did not sign and Accounts.—Martin & Co., Managing Agents.

ORIENTAL GAS CO., LD.

Annual Meeting

The Ordinary General Meeting of the Oriental Gas Co., Ld., was held at the office of the Company, Finsbury House, Blomfield Street, London, E.C. 2, on Thursday, 23rd November, Mr. Stanley Hunter Jones, M. Inst., C.E. (Chairman of the Directors), presiding.

The Secretary (Mr. S. Rainer) having read the notice convening the meeting:

The Chairman reviewed the Company's activities during the year in the following terms:—

Since we last met there has been no marked change in the trading conditions of India in so far as this Company is concerned, although if there has been any change at all it has been for the better and is perhaps reflected to some slight extent by the small increase in the sale of gas which we have to report.

The new contract for the public lighting of the City of Calcutta, which commenced in February of last year appears to be running smoothly and satisfactorily.

We have made a reduction in the price of gas to the Private Consumers of As. 8 per 1,000 cu. ft. as from the end of the March quarter 1933 and this, we hope, will stimulate the demand when trading conditions improve.

Turning to the accounts, the Capital Account remains unaltered. In the Revenue Account Coals cost £29,258 as compared with £33,861 in the previous year, a saving of £4,603, the tonnage carbonized being 48,192 tons as compared with 49,656 tons. Salaries in the Manufacturing Department were more by about £390. Carbonizing Wages were less by £240; Purification was about the same but Repairs and Maintenance were less by £6,262, the repair work having been lighter this year than last. The total manufacturing cost was less by £10,736.

In Distribution the total cost is less by £1,601; Salaries and Wages of Officers being, however, slightly higher by £36 and Repairs of Mains and Services higher by £570, but Meters were less by £1,419 and Fittings by £789.

Public Lamps were less by £1,655, the maintenance of the lamps in Cossipore and Manicktollah districts having been transferred under the new contract to the Corporation. Rents, Rates and Taxes were more by £1,494 due to taxation on a higher balance of profits. Management shows a small reduction of £230. No Bad Debts were incurred. Law Charges were less by £94, Superannuations and Pensions were more by £70, Passages were less by £477, fewer officers having been on leave. Insurances: This item was less by £329.

Turning to the Receipts side, Gas Rental was less by £6,269 due to the decreased rates for Public Lamps for the whole year and decreased price to Private Consumers for the last quarter of the financial year. Meter and Stove Rents were slightly less by £83. Residual products: Coke and Breeze were less by £1,639 due to a lesser quantity being sold, 18,729 tons as compared with 24,507 tons last year, and to a somewhat lower average rate per maund. Tar showed a slight increase of £58, more favourable rates obtaining having been almost neutralized by smaller sales. Rents receivable showed a small increase of £28. Transfer Fees at £8 indicate the few dealings during the year. The final balance of profit carried to Net Revenue Account was £34,999, an increase of £5,746 on the previous year.

Net Revenue Account. The Directors, as you will see, have transferred a sum of £10,000 to Reserve Fund and this has reduced the balance available for distribution according. It now stands at £110,125-7-5. Bank Interest was £803; Interest on Investments was £828; Exchange profit was £6,600. Depreciation, Renewals, Suspense and Exchange Accounts remain as heretofore.

As regards residuals, as I have said, 18,468 tons of Coke were sold and 499,691 gallons of Tar. The market for Coke has been depressed and prices received have been low.

Turning to the Balance Shee, our investments stand at £26,189 and our cash at Bankers and in hand is £29,557. Amounts owed by the Company were £8,851 and amounts due to the Company were £3,195.

You will observe that we propose to you a final dividend free of tax and for your information I may say that for many years the dividend was paid free of tax and we have thought that for this occasion we might resume the payment of dividend on a similar basis which we hope you will approve.

It is gratifying to record that there has been a nett increase of 141 Public Gas Lamps added to the system in the period of the new Public Lighting Argeement from 1st February, 1932, to 30th June, 1933.

A new agreement for the lighting of the Calcutta Maidan for a period of 10 years was concluded with the Government during the year under review:

There are indications of a development of the use of gas for trade purposes in the outer area of the Company's district of supply and to meet this we have been adding, to our system of mains and have revised our scale price of gas for such purposes and we hope for satisfactory results.

The Manager reports that the Company's plant is in good and serviceable condition. He also reports that relations with the Public Authorities have, as usual, been quite satisfactory.

In conclusion I would say that our best thanks are due to Mr. Garsed and his staff for the good work they do for us. This will be the subject of a special vote.

I will now propose the adoption of the Report and Accounts and will ask Mr. Ellis to second the resolution and I shall be pleased to deal with any questions you may wish to ask before putting the resolution to the vote.

Mr. Ellis seconded the resolution.

Mr. Parker, as a shareholder, congratulated the Board and staff of the Company on what he described as the best report submitted to the shareholders for thirty years. A report so satisfactory in character left little scope for comment or criticism. He directed attention, however, to the demand being put forward in certain quarters in India for a statutory reduction in the sterling value of the rupee from 1s. 6d. to 1s. 4d., and enquired whether the potential effect of such a change was receiving consideration.

The Chairman replied that the Board had considered the matter but were advised that, at the moment, it would be advisable to take no action. The matter would, however, continue to retain the Board's attention.

Mr. D. H. McLanchlan, also a shareholder, endorsed the congratulations tendered to the Board by the previous speaker, and, noting that the Company's Statement of Accounts was based on he pre-war ratio of the 1s. 4d. rupee, said he presumed the item "profit on exchange, £6,600 13s. 4d." represented the diffeerence between that ratio and the actual ruling ratic of 1s. 6d.

The Chairman assented, and added that, of course, if the rupee reverted to 1s. 4d., that item would disappear from their revenue. At present it was treated as an "extra." He was unable to forecast in what manner the Constitutional changes foreshadowed in the White Paper would affect them, but he based his own confidence in the Company's financial future on its low capitalisation per million cubic feet of gas sold. The Chairman added that the Board had never declared higher dividends solely on the strength of the gain on exchange.

The resolution approving the adoption of the Report and Accounts was carried unanimously.

The Chairman moved a resolution approving the distribution of the dividend in terms of 3½ per cent. less tax, and 4½ per cent. free of tax. Mr. Gill seconded and the resoluton was carried.

The Chairman, in moving the re-election of the retiring Directors, Mr. B. W. Ellis and Mr. B. M. Gill paid a warm tribute to their services and said their colleagues would be sorry to be without them.

Mr. Macleod seconded and the resolution was carried.

Mr. Ellis, returning thanks, mentioned that he had been connected with the Company about 40 years and was one of the largest individual shareholders.

Mr. J. H. Fletcher moved, and Mr. McLauchlan seconded, the re-election of the Auditors, Messrs. S. W. Savage and F. J. Bradfield. The motion was carried.

Mr. Parker moved, and Mr. Howard Fletcher seconded, a resoultion increasing the remuneration payable to the Directors by the sum of £500 per annum as from 1st July, 1933. The resolution was carried unanimously.

The Chairman, returning thanks, stated that the last time the Directors' fees were fixed was twenty-two years ago. Meanwhile, the Company's activities had expanded considerably, and the present fees were lower than those paid to the Directors of similar Companies.

Mr. Ellis moved a vote of thanks to the Manager, Secretary, and staff of the Company, both in Calcutta and London, and in doing so, paid tribute to the fidelity, energy, and devotion displayed by each member. After extolling the work of each member of the Calcutta staff, he proceeded to allude to the satisfactory results obtained from the liaison arrangements with the Bombay Gas Co., and concluded with a tribute to the work of the Secretary of the Company, in London, who had been associated with them for 45 years.

Mr. Bradshaw seconded the resoultion which was carried unanimously.

Mr. Rainer returned thanks on behalf of himself and the other members of the London staff, and said it would be a great pleasure to him to convey the terms of the resolution to Mr. Garsed and his colleagues in Calcutta, where the climatic conditions and other difficulties imposed upon them the main burden of the Company's business.

Moving a resolution of thanks to the Chairman and Directors, Mr. Bradfield quoted some interesting figures illustrating the expansion in the Company's operations in the past ten years.

Mr. Parker seconded, and the resolution was carried, the Chairman returning thanks.

(*Market Review continued from page 1463*)

GRAINS AND SEEDS

WHEAT

The wheat market was quiet during the week in the local as well as principal up-country markets. Trading was of a moderate volume and buying interest was evenly distributed. Stockholders were ready sellers due largely to the fact that new crop showing in Northern India have been quite good and the yields definitely in excess of last seasons is fully expected. Punjab wheat has secured an advance of 2½ annas owing to the depleted stocks of this grade being insufficient for mill requirements. Chaudausi has appreciated in value somewhat slightly, while Cawnpore prices have tended to ease off. The average quality of arrivals, however, is considered good for this part of the year and it is clear that long storage has not resulted in the deterioration which, at one time, was anticipated. Demand for flour has not been maintained and prices, on the whole, have been lower.

RICE CROP

According to the latest reports of the Department of Agriculture, Bombay, the total area under the rice crop is 3,134,000 acres. Bombay Presidency proper has 1,845,000 acres, while the Indian States in the Presidency have 231,000 acres and that in the Indian States is 6,000 acres, under the crop 12.6 and 11.4 per cent. respectively, below the final revised area of the last year and the average actual area of the preceding ten years. In the Presidency proper, the decline in area is due to excess of June rains in Konkan and the Western portions of Deccan and the Karnatak and their deficiency in Gujarat, while in Sind it is due to late inundation in parts of the province. The decrease in the case of Indian States is due to non-receipt of information from the Western India States Agency and other Gujarat States.

The total estimated outturn in Bombay Presidency proper is 16,800,000 cwts., in the Indian States 1,919,000 cwts.; in Sind 9,907,000 cwts. and in the Indian States 31,000 cwts. which are 8.0 and 7.5 per cent. respectively, below the estimated outturn of the actual area in the last year and the average estimated outturn of the actual area during the preceding ten years.

WORLD OF INDIAN FINANCE

Calcutta, Dec. 21, 1933.

Although call money was normally quoted ¾ per cent., money was distinctly in better demand during the current week. Both here and in Bombay business was done at appreciably better rates. The union rate for three month which was quoted 1¾ per cent. last week, is reported to have been raised to 2¼ percent. this week. There is a general impression that tighter money conditions have fairly come to stay, and that the outlook of those, who have in the past found it difficult to employ credits, is decidedly better. The change in the outlook will of itself be a factor in money rates in the coming weeks.

The comparative tightness of money is also reflected in the results of the last Treasury Bills tenders, which, it may be mentioned, bear out in full our prognostications of the last week. Arguing on the basis of the conditions of the last week-end, and on the trends of the immediate past, we ventured to suggest that the Treasury Bills rates of last week should not be considered as stable, that "it is quite possible that owing to the prevailing stringency of the money market, sales of intermediates during this week have shown an appreciable fall since the last" ; and that "it is quite on the cards that next week's auctions will show a small improvement on the rates available from the market". The results of this week's tenders have proved our forecast to be true in every detail. The tendency of tenders on the auction days to fall, to which we drew pointed attention last week, has continued during the present, the total offer amounting to no more than Rs.. 327½ lakhs against Rs. 341½ lakhs on the previous week. The contrast is even more striking if we compare it with the figure of Rs. 497 lakhs in the week ending December 4. It has also to be remembered in assessing the significance of the fall in the tenders of the auction days that a larger amount of Treasury Bills have matured during the current week and that there was at the beginning every sign that the rates would be more favourable to investors. The sales at the tap-rate have also steadily come down from Rs. 198.25 lakhs to Rs. 112 lakhs during last week and thence to Rs. 68¾ lakhs during the week under review.

The conditions indicated by these changes are naturally adequately reflected in the rates available for the market.. The lowest rate accepted was Rs. 99-5-6 against Rs. 99-6 of the last two weeks and the average yield has gone up from Rs. 2-8 to Rs. 2-9-9 as was suggested in these columns last week.

It is interesting to examine the Treasury Bills policy of the Governmet during January both in consideration of the interest of the investor of short-term funds therein, and in consideration of the significance which the Treasury Bills policy bears to money conditions, and the importance of monetary conditions to the course of the giltedge market. The two outstanding facts of the Treasury Bills situation, as it will be found in January, are firstly, that there are about only Rs. 6¾ crores of maturities of Treasury Bills and secondly, that January is one of the best revenue months and is part of the period in which the Government have a substantial surplus of income over outgo. It may be said, therefore, that the Government should not find it difficult to meet the maturing obligations from the ordinary revenue surplus and that, in the absence of other considerations, the Government should prefer to leave the market in possession of such surplus funds as it may have at that time. But it has to be remembered, at the same time, that the month of February is a period of heavy maturities amounting to as much as Rs. 8 crores, and it might well be that Government would decide to make the most of their freedom from immediate present obligations to provide for their needs in February. It is likely that Government would continue in January to pursue their policy of drawing in funds by sales of Treasury Bills. The only change that one might expect is that with a view to secure more competitive rates, the Controller of the Currency might decide on reducing the weekly offer from the present level of Rs. 2 crores to Rs. 1¼ crores. In any case, it is certain that the Treasury Bills, which mature in January, will be fully covered by renewals, so that there will be no addition to the market's resources. If, however, there should be any excess of sales over maturities, its incidence on money conditions will indeed be marked.

It is clear on our analysis of the conditions that the stringency which is now noticeable in money

will not be relieved during the month of January and that if anything, the prospects are for a further tightening up. The implication of this to the giltedge and exchange markets is obvious.. On the one hand, the market would be obliged to seek an addition to its resources through sales of sterling and on the other, giltedge would be deprived of any support from an access of funds in the market. But for the present, it is well to note that giltedge has been more than keeping up the progress it made during the last two weeks. There has been an appreciable improvement in prices. Notwithstanding the profit-taking sales of weak operators, 3½ per cent. paper has registered an improvement of 9 annas since last Friday. Business was actually done at Rs. 82-2.

* * *

The rist in the Rupee Scrips has not been so spectacular as in the corresponding sterling securities, which have gone up by £1½ during the same period. Yet the tone of the market is distinctly stronger than it has been for some time. There is more genuine enquiry for long-dated scrip ; and this may be regarded as a definite return of confidence in longer-dated securities. The fear of a change in the ratio has now been set at rest by the victory which the Government gained the other day in the Legislative Assembly ; and one may hope that after the window dressing for the year-end closing is over, banks and big investment houses will begin to show substantial interest in Indian securities. In sympathy with the basic Paper 3½ per cent. New Loan 1947-50 has also risen by 8 annas during this week with a markedly better attention shown to this scrip. Interest was also shown in the short-dated scrips though the turnover is reported to be not appreciable.

NOTICE

Owing to the Christmas holidays there will be no issue of INDIAN FINANCE next week.

Editor.

Exchange was very steady at 1s. 6 1/32d., during the week and the improvement in the weekly offer from £50,000 to £120,000 affords evidence of the strength of the Rupee rate. But for the large bloc of Treasury Bills maturities during the last fortnight of this month, the Rupee rate should have shown greater strength. But in the future there are two distinct bull points for the Rupee rate ; one the prospect of continued tightness in money conditions and, two, the presence of large gold stocks in Bombay awaiting export. Though last week Rs. 85 lakhs worth of gold was shipped, it bears a very small proportion to the total stocks. When the exports commence with any vigour the Rupee rate should be greatly strengthened by competing bidders. By the same token, the Government should be able to purchase sterling for appreciable amounts.

The closing rates are : 1s. 6 1/32d., T. T. till the middle of January with 1s. 6 3/64d., available ; 1s. 6d., T. T. till the middle of February ; 1s. 5 31/32d., February-March T. T. ; 1s. 5 15/16d., April-May T. T. and 1s. 5 29/32d., Monsoon months T. T.

Bills may be quoted : 1s. 6 5/32d., this month ; 1s. 6 1/8d., January ; 1s. 6 3/32d., February-March and 1s. 6 1/16d., April-May.

Money was in demand throughout the week. Call money quoted 3 per cent. and onemonth and twomonth deposits quoting 1½ per cent while threemonth deposits quoting 1¾ per cent.

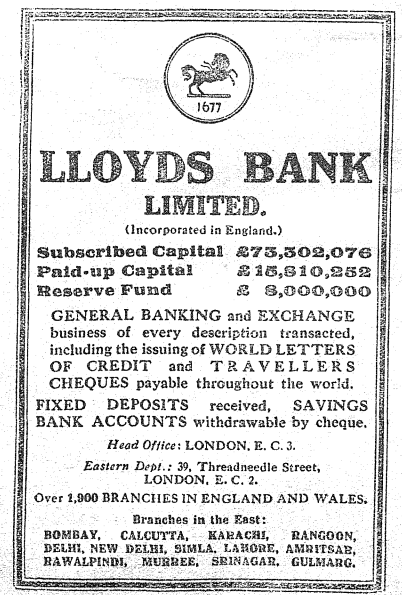
(*Continued from page 1507*)

consider transfer arrangements in Berlin, early this month.

It was not with joy, therefore, that the representatives of the foreign creditors attended the Berlin meeting. They had their own premonitions as to the worse fate, which was in store for them. But, even the most pessimistic among them could not guess at a drastic reduction in the transferable portion of the interests and dividends. So, when they heard that 30 per cent. alone, instead of the 50 per cent., will be transferred, it came as a shock to them. They were, therefore, quite outspoken, when they told Dr. Schacht that his view of the present transfer arrangements being highly detrimental to the Reichsbank had not their approval. The foreign creditors held the view, on the other hand, that the conclusion, arrived at by Dr. Schacht, is unwarranted on the score of Germany's economic improvement during the past few months. The Reichsbank's reserve has shown an increase, and Germany's trade balance has also improved. In view of these two factors, the creditors had grounds to plead for increased transfers ; but that was not to be, as is now very clear.

* * *

Dr. Schacht has always boasted that Germany would never default. It now seems that he hoped to create such an impression more by his ingenuity than by straightforward dealing, which even the meanest intelligence can understand. In these critical times, there is no nation that has not defaulted actually, or pleaded for easier terms of settling their debts. But, the German way is unique. The whole scheme of the transfer moratorium is suspect. It looks as though it is planned, with a view to expand the export trade of Germany. This suspicion gets further confirmation with the latest proposal of a transfer of only 30 per cent. It is to be hoped that Dr. Schaeht will not have affected the credit of Germany when he completes his tackling of this problem.



FINANCE ABROAD

	Sterling dollar rate	Sterling franc rate	London price of gold
December 14	... 5.01⅜	83.46	126s. 1d.
December 12	... 5.10¾	83.46	126s. 7d.
December 16	... 5.13½	83.43	126s. 4d.
December 18	... 5.14¼	83.28	126s. 9d.
December 19	... 5.12¾	83.46	126s. 9d.
December 20	... 5.08	83.90	126s. 9d.

The developments, regarding the transfer moratorium, have put the interest in the vicissitudes of the dollar and the franc into shade. During the week, the most outstanding feature of the international financial situation is in connection with the German transfer moratorium. When invitations were sent to the creditors of Germany to attend a meeting at the Reichsbank early this month, the creditors resented the summons, if they did not actually feel insulted. The results of the meeting regarding the transfer arrangements, have now been published.

The central committee of the Reichsbank has agreed to the arrangements for amounts maturing during the first half of 1934. As before, the interest on the sinking fund, on the Dawes and Young loans are to be transferred fully. But, of all the accruing interest and dividends which have been paid into the Reich conversion funds for foreign debts, also other payments except amortisation, the new arrangement is distinctly to the detriment of the creditors. Till now, 50 per cent. of the interests and dividends were being transferred. But, according to the new arrangements, only 30 per cent. is to be transferred. As to the balance of 70 per cent., the existing regulations will apply, and the amount will be placed to the account of creditors in the conversion fund. As regards the domestic and foreign holders of German bonds foreign securities, no change has been adopted.

To Dr. Schacht, the President of the Reichsbank, Germany owes a good deal for the rehabilitation of her finances. It is no small credit to Dr. Schacht for the manner, in which he rescued German finances from the moribund condition, he found them in. But, his achievements, so far, relate to the past, in the sense that German indebtedness has been induced to lose its grip on German economic development. But, Dr. Schacht does not seem to realise how much he can do for the future credit of Germany in the world. It is not sufficient, if he succeeded only in relieving the present troubles. A man of his foresight should have cared to see what impression his schemes have produced on the outside world. He appears to be the wood-cutter who misses the wood for the timber it contains.

In fact, at the time of the meeting to reconsider the transfer moratorium arrangements, creditors of Germany, except those in Holland and Switzerland, were planning to protest through their Governments against what they termed as a discriminatory preference as between one creditor and another. Thus, the stage was not well set for the reopening of the question. Dr. Schacht should have seen to the pacification of the disgruntled creditors in time, so that a favourable atmosphere might be present when the question of transfer moratorium was reopened. It is surprising that he failed to do so.

In fact, he took an unconscionably long time to get conversion scrips ready for presentation to the creditors. Before the creditors had time to get accustomed to the scrip, arrangements were effected with Switzerland and Holland, by which the creditors in these two countries were enabled to get cent. per cent. of the value of their dues from Germany. The machinery, by which this was effected, is now common knowledge. This scrip arrangement with Swiss and Dutch creditors served the purpose of oil to the fire of grievance among foreign creditors. While the creditors were racking their brains as to the procedure to be adopted in discounting the scrips, while they were still in a flux as to the advisability of retaining or discounting the scrips, and while they were still debating whether they should encourage additional exports from Germany against the scrips, events at the Reichsbank were transformed with such rapidity that the net result was confusion, among the creditors, worse confounded.

The Press in the creditor countries turned hostile to Germany. If the respective governments did not take vigorous action immediately, it was because bigger issues, such as Disarmament, were hanging fire. The governments of the creditor countries were very reluctant to take any step which would give a handle to Germany for wrecking the cause of Disarmament. It is obvious that Germany was waiting for some opportunity. For several months, it was indulging in a wrangle over the issue of equality. But, the diplomacy of Germany, for once, excelled itself, by raising the cry of not "mere equality" but that of "peace with equality." This slogan served its purpose eminently in camouflaging the real intentions of Germany. Foreign Powers, other than France, were really impressed with Germany's desire for peace. If she should stand for world peace, the foreign powers argued, it was worth their while to evolve some formula, by which her claim for equality might be satisfied. It is with this object that Mr. Henderson made his tours from one country to an other on the Continent. Thus, it will be seen that the foreign creditors of Germany could not enlist the active support of their governments in lodging a protest against the inequalities of the transfer arrangements. The creditors themselves were diffident, in several instances, to involve their governments in their comparatively narrower interest. As citizens of the world, they had the cause of world peace nearest to their hearts, so much so that they thought it would be prudent to wait until the issue of Disarmament was settled before they could urge their governments to lend support in the matter of transfer conundrums.

Having thus made up their minds not to bother their governments, creditors, other than the Swiss and the Dutch, were consulting their bankers as to the best manner of disposing of the conversion scrips. In this connection, it should be remembered that the Reichsbank itself was prepared to discount the conversion scrips at 50 per cent. Thus, it would mean that the foreign creditors of Germany would be receiving, in all, 75 per cent. only of their dues. When the creditors were hesitating as to the wisdom of losing 25 per cent. Swiss and Dutch speculators offered to buy the scrips at 52 per cent. of its value, as they could thus gain 48 per cent. on the scrips. Enquiries were made at the Reichsbank whether such sales would be valid. The reply came that they were not. But, Dr. Schacht had no means of preventing such transactions. All told, action was not taken by the creditors to any great extent.

Perhaps, it was with an idea to prevent such sales by British creditors, that Dr. Schacht offered British banks, who did acceptance business, a commission of 2½ per cent. in relation to their dealings in conversion scrips. It must be said to the credit of British bankers that they resented the offer of such a big commission, something akin to a bribe, offered most probably insidiously to influence them to serve German interests. The British banks, however, did not openly declare such sentiments, as mentioned above. The impression, created by them, amounted to this. But they asked Dr. Schacht if they could transfer the bulk of this commission to the holders of conversion scrips. It is strange why Dr. Schacht vetoed such a proposition. While the controversy over this matter was still at its height, the announcement came about the meeting to re-

(*Continued on previous page*)

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 2½ crores of three months Treasury Bills were opened on Tuesday, December 19. The total amount offered was Rs. 3,41,50,000. Tenders at Rs. 99-5-9 and above were accepted in full and those at Rs. 99-5-6 were alloted approximatey 75 per cent. Lower tenders were rejected. The total amount accepted was Rs. 2½ crores, the average rate of accepted tenders being Rs. 2-9-9 per annum.

Tenders for Rs. 2½ crores of three months Treasury Bills will be received on Tuesday, January 2. Successful tenderers should make payment on Friday, January 5. Other conditions are as usual.

Three months intermediates will be sold from December 20 to 30 at Rs. 99-6-0 per cent. subject to the conditions previously announced.

Three months intermediates sold from December 13 to 18 amounted to Rs. 68,75,000.

STERLING TENDERS

In a press communique the Controller of the Currency says:—On Wednesday, the 20th December, 1933, tenders to the amount of £220,000 (two hundred and twenty thousand) at 1s. 6 1/16d. were received and allotted in full. £1 million (one million) will be offered for tender on Thursday, the 28th December, 1933, on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 30th November, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	2,148
British Treasury Bills	14,590,185
Other British and Dominion Government Securities	14,790,333

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

December 21.

Due to the near approach of Christmas and New Year holidays business during the earlier part of the week was on a much reduced scale, but later in the week due to a better tone of jute and jute goods this section had shown a fair amount of improvement. Government paper have at the same time not been lagging behind and the rise, mostly based on the denunciation of 1s. 4d. ratio plea, by the assembly was a bit of a pleasant surprise to those who were bulls in 3½% paper. Coals well maintained their position, but tea had no such record to show. Bank shares were asked for and values were well maintained. Cottons were quite neglected. Sugars were conspicuous by their weakness and uninteresting state, but electricals as usual had a fair enquiry. Rubber shares had no enquiry but it is worth the trouble of investors to investigate good scrips in this section.

3½% moved up well and touched Rs. 82 but it is doubtful if the rise will be long maintained. 1947-50 3½% was in good enquiry at Rs. 94/4 and 4% 60-70 changed hands at Rs. 98/8. Short dated issues were will asked for. Even among the long dated ones terminables having a good preference over the non-terminables.

Jute shares were featureless and rather easy for the better part of the week but will improved towards the close. Howrahs touched Rs. 49 on Wednesday but dropped down to Rs. 8-10 under heavy selling pressure by a big operator. Kamarhattys was also steady at Rs. 504.

In Coals values were well maintained. Amalgamated changed hands at Rs. 15, Equitable at Rs. 21-12, New Beerbhoom came to deal at Rs. 13-8 and Pench Valleys at Rs. 36-4. At the moment there is little prospect for a further rise in this section.

Teas have been ruling featureless and values are well maintained. There is no buying or selling interest at the moment but taking the longer view of the market the prospects are fairly good.

In Cotton shares there was a sharp decline in Bengal—Nagpurs which touched Rs. 16-12. Kesorams were however steady at Rs. 314. Muir Mills came to deal at Rs. 260.

Sugar shares were dull and easy and the least enquired for scrip in the exchange, with the exception of Carews which were paid up to Rs. 15-4, Cawnpores were done at Rs. 30 and Champaran at Rs. 22, New Savan came to deal at Rs. 12-4 and Samastipur at Rs. 12-8.

Banks ruled steady. Imperials fully paid and Contributories were paid Rs. 1,240 and Rs. 306 respectively. Centrals were steady at Rs. 23-12 to Rs. 24.

JUTE AND JUTE GOODS

JUTE.

Calcutta, December 21.

During the current week the market has ruled very steady with a rising tendency. The highest and lowest quotations for May futures were Rs. 29-12 and Rs. 27-4 respectively. The inclination for a rise hinted in the previous weeks report has materialised much earlier than anticipated and the tendency at the time of writing is fully steady with every possibility for higher prices in the course of next few weeks.

Business in ready firsts was done up to Rs. 25-8 and for 1st week of January at Rs. 26-4 with buyers over. Mills have paid Rs. 4-8 for Indian Jat LR and annas two less for District. There has been a long support to the futures. Due to the prevailing low prices of jute and no immediate pressure for delivery long interests have fully absorbed the May hedges, sellers being reserved the May delivery being just at the fag end of the current season. The market is supported by the poor arrivals of jute in the moffussils, the moneyed class having made heavy purchases this season and holding the same in anticipation of higher prices.

Imports of jute by the middle of December have been over 53 lakhs of bales against 47 lakhs last season. But the heavier arrival has been fully offset by larger exports which approximately amount to 22 lakhs bales against 14 lakhs by this time last season. If the Government Crop forecast is correct the quantity of jute to come in the course of next six months will not exceed 25 or 30 lakhs of bales. Dundee and Continental spinners are expected to buy larger quantities than previous seasons and this has been an important bull factor in the market.

JUTE MANUFACTURES

Calcutta, Dec. 21.

Further strength has been shown by the hessians market and values all round have shown a further advance over the previous week. The advance has been very pronounced in case of February futures and less so far other positions. The premium of readies over Jan.-March position has vanished and that over April-June has considerably reduced the enquiry from the overseas markets towards the close has been poor but on the whole the general tone of the market is fully steady.

The exports of the hessians during the current months are not expected to be less than previous months. Due to X'mas holidays the production during December will be less than usual consequently there is every probability that the stocks at the end of December-May show further shrinkages as compared with those at the end of November.

Mills have sold very large quantities for all positions up to Autumn next year. The same at the moment are well absorbed and the tendency of the market is fully steady.

Heavy goods market has been slow to respond to the rise, but the undertone however has been healthy and if off-take is maintained at the previous month's level, the market is likely to look up in future. For bulls however hessian is bitter than heavy goods, the latter in spite of cheaper values will take long to show any appreciable rise.

COTTON AND COTTON GOODS

COTTON

There is not much change to report in the market during the current week. Values have been ruling all along in the vicinity of Rs. 182. In absence of fresh bear covering there is not much of a fresh rise, on the contrary a slight set-back is noticeable. The American and Liverpool markets are easy and tend to weakness. Indo-Japanese settlement is still pending and the Japanese ban on Indian Cotton continues. Stocks in Bombay are showing increase and the position is favouring weakness. The 3rd All-India crop forecast is to be out this week. Unless it shows a material reduction in crop the position of Indian Cotton at the moment cannot be construed as bullish. At the same time it must be borne in mind that American sentiment is improving and the prospects of a next crop are for real curtailment the market may show improvement any time.

PIECEGOODS

Calcutta, December 21.

The market has remained dull and featureless without much business passing. So far Japanese goods are concerned there has been for sometimes past as no new business, nor even any sport lots available. In Lancashire too the manufacturers are not in a mood to close business on the basis of existing offers made to them. Dull conditions have prevailed in the Indian goods as well at the moment. Yarn too has ruled dull and featureless and the characteristic seasonal weakness is in evidence.

BULLION

GOLD

Calcutta, Dec. 21.

Gold: Values of gold, both in home as well as London Markets were well maintained in the nearhood of Rs. 31-6 and 126s. with minor day to day fluctuations caused by the movement in London-Paris cross rate which again was ruling at about 83 to 84 francs. Large amount of business is reported done for forward deliveries extending up to February. Stocks in Bombay markets are heavy being estimated at 10 lakhs tolas and the pressure to sell has placed a discount on readies and near positions by one to one anna and a half per tola. Spot enquiry for home requirements as well as for export is rather poor. Daily off-take is also poor.

SILVER

Silver.—Further weakness have developed in the silver market following the unloading by long and tired bulls, consequently a further drop has taken place the prices touching the low lurl of Rs. 53-4 yesterday. The Shanghai Tail has remained stationery at about 1s. 8¾d. and London quotations have ruled almost without any material change in the vicinity of 18½d. The Indian silver is for below the import parity this being due to heavy selling. Purchases at this crash may in the long run prove profitable. Stocks are heavy at 10,000 bars and daily off-take is poor at 25 bars.

LONDON (Air-Mail Week)

During the week under review the tendency of the market was firmer in sympathy with an improvement in the China exchange and buying from that quarter.

Indian bazaars were not active but some speculators re-sold at the higher level. Continent also sold, but on the whole offerings were moderate.

Fluctuations in the dollar exchange restricted business with America. In spite of this, New York was a buyer without, however, exerting pressure.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 27th ultimo, to mid-day on the 4th instant:—

Imports

	£
Soviet Union (Russia)	19,900

SUGAR

The market has ruled quiet and values have remained unchanged. There is not much of demand though the stocks are slow. Indian sugar has began to move and finding a ready market though values are very irregular according to quality. The sugar marke in short has been featureless for several weeks and is likely to continue to remain so.

TEA

Sale No. 27 was held on 18th and 19th December, 1933 when 19,000 packages of tea leaf with export rights, 6,300 packages of tea leaf and 9,000 packages of tea dust were sold for home consumption at an average price of annas /10/4, /5/- and /5/6 per lb. respectively.

The quality offered was good to better and showed improvement in Darjeeling and Dovars varieties. Values were steady and showed an improvement by a full 3 pies. Better class goods were however not in great demand and prices were irregular. Leaf grades were fully firmer and dusts were very strong.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

THE SEASON'S CHEER

To all our readers and our advertisers, who are at once the props and beneficiaries of efficient journalism, our best wishes for a merry Christmas and a happy New Year.

* * *

In saying this let us affirm we are no slaves to empty formality. The rationale of religious festivity is fast tending to be overlooked alike by the intellectual and the average man. When the power of organised religion is lost to the world, it would perhaps then be realised how difficult it is to counter the vagaries of the individual mind and create the cheer that comes of a common gaiety. Still from the force of habit, we are more cheerful in 'xmas or Puja and wish each other the greetings of the season but with a gusto that diminishes as the years pass on. Many there are, who even flatter themselves that they are more of sentient beings in proportion to their ability to resist the infection of alround gaiety. But when we think of it, there is a purpose in the ordaining of seasonal festivals which cannot be attained otherwise. To early Man, the gathering of the harvest or the change of the season marked the time for common merriment. To the Hindu, every festival is fixed not in relation to the wall calendar but the nautical almanack. The feeling that the season's work is done and the year's grain garnered is sufficient to induce a spontaneous out-burst of enthusiasm. Religion invests it with the sanctity of a duty to the Gods or one's ancestors. And so the tradition grows in its binding character, till the means of the moment or the month's budget comes to possess little or no relevance to the outlay on the fete.

* * *

Much as we may ridicule the idea of a hedonistic calculus, it is interesting to speculate on the amount of enjoyment which would fall to the lot of Man, if festivals were to be planned with an audited balance-sheet in hand, or even a nice calculation of all that is on the cards for one's weal or woe. Nothing but a sense of religious duty will persuade the average man to throw his daily cares to the winds, or enable prince and peasant to make equal contribution to the fund of common happiness.

* * *

For this, not all the rationalism of modern times will succeed in finding a substitute. Even the national fetes—and it must be rememberd that nationalism has long been a second religion in most countries of the world—have left much to be desired. The load of individual worry and anxiety is not lightened by the thought of national glory. What can induce that forgetfulness of self which is at once the condition and the essence of common feeling? And once there is an effacement of self, though only temporarily and in thought, there is a manifestation of a common aspiration and a common endeavour which at other times would seem impossible except on the basis of a common irrationality.

* * *

In the economic conditions of the last few years, it were, indeed, a super-human effort to induce good cheer in the commonalty of mankind. Three years of raging blizzard had nipped every bud of hope in the human mind. The world was well-nigh flattened out at the end of 1931. The vast and imposing structure of international finance crumbled, even like the castles into which we sometimes see the clouds shape themselves. The unemployed masses had been decimated by three successive winters of exceptional sevrity. World trade had shrunk to a fraction of its old volume. Industries were disorganised, markets stabilised, so to say, in chaos. We did not even dare to hope for better things or slowing down of the pace of economic extinction. The whole of 1932 was spent in the fear that nothing would be too terrible to be true; and when at the end we found that the pessimists were disproved more convincingly than the straggling optimists, the world heaved a sigh of relief; but hope, expectation of positive good, seemed a prohibitive luxury.

* * *

The Chistmas of 1933 is notable for the fact that we have less suffering to recount in the year than for a long tmie past. True it is that the outstanding events of the year are by themselves not such as to make us feel jubilant. The failure of the World Economic Conference, the breakdown of Disarmament, the rising tide of belligerence in Europe and the weakening of pacifism all over the world are not happy to recall in a season set apart for good cheer. But it is sufficient that far less of unemployed humans are left to face the severities and hardships of this winter than of its immediate predecessors. Trade is everywhere on the mend. According to the latest telegrams from Geneva world trade during October showed an increase of 18½ per cent. in imports and 16.3 per cent. in exports as compared with six months ago and that the value of world trade was, contrary to the experience of previous years, higher in the autumn than the spring of this year.

* * *

That this improvement is well spread over all the countries of the world, there can be no doubt. And when we remember that such improvement has come in spite of the blunders of the statesmen, there is more reason for faith and hope than there would be otherwise. For most measures of economic reform have only a temporary stimulative effect; and it stands to reason that if the improvement were the result of conscious endeavour, gratification at the result would be also accompanied by nervousness that it might not prove lasting. We do not suggest that there is no place for conscious policy; or that the need for it has been obviated by what, to all appearances, is an assertion of the natural forces of revival. But we contend that the character and problems of the depression are such that, unless the most thoroughgoing planning of international economic life is taken on hand, there is the danger of artificial reform replacing old difficulties with new. If we take for instance, the question of the removal or the lowering of tariffs, there can be no doubt that the immediate effect of such a measure would be to stimulate the flow of international trade. But at the same time it is more than probability that the evolution to a new order on the basis of a redistribution of industries is held under violent check. And who knows that the reduction of purchasing power in the industrially backward countries through the reduction of productive activity will not lead to a worse crisis before long.

* * *

Much as it might have seemed impalatable a year or two ago, it is still substantially true that the time for economic reconstruction comes when the forces which brought about the depression, have apparently spent themselves out and things get on the move out of the world-wide hold up of business activity. For only then, and not till then, would it be possible to initiate measures of reform. While the economic

blizzard rages, every proposal is open to the criticism that, while it apparently affords relief at one point it also imposes additional and dangerous strain at another. Nearly all the palliatives that had been proposed in the past come under this category, though we confess at the same time that this is no excuse for Governments watching the blizzard with folded hands. Remission of taxation at the risk of unbalanced budget, with a view to afford relief to indusrty, capital expenditure by the State on new development, all these might be adequately defended against criticism; but it is undeniable that it is a difficult task to ensure that the obvious advantages are not outweighed by latent dangers. The depression was the work of natural forces, and, when Nature herself shows the way out, then is the time to rebuild. It is up to human intelligence not only to obliterate it altogether but to render its recurrence impossible.

* * *

That the vicious circle of the depression has at last been broken, is the most encouraging thought in the Christmas of 1933. As we pointed out on earlier occasions, no one can make the mistake of believing that the problems of the depression have been solved at a stroke. All that has happened is that scope has been afforded for working well-conceived plans of reconstruction. Things are, no doubt, on the move; but the fear of congestion is not yet gone. International trade may yet suffer a hold up. National economies are not above the danger of maladjustment of production and consumption. Trade relations have not been rationalised. The organisation of production and markets on an international scale, which is the only one worth having, is yet to be attempted. In other words, distribution among nations and distribution among classes have yet to be rationalisied. The sufferings of the last four years will have been in vain, if with the first glimmer of hope men relapse into inactivity. Within each country as well as in the sphere of international economic relations, there is much uphill work to do, which remains yet untouched.

* * *

It is nearly six months since the World Economic Conference broke up in impotent despair. And it is significant that at about the same time last year determined efforts were made to secure its convention .The odds were nearly against it. In the autumn of 1932 it was the role of Great Britain to put the spoke. Her conditions for a return to the gold standard are a classic instance of putting the cart before the horse; and the Preparatory Committee broke up in disgust. In the middle of 1933, it was America's turn to find that the requirements of her domestic situation ill-fitted with any reasonable programme of international action.

* * *

The importance of the last half-year consists in the fact that the misfits have been largely readjusted. Practically every nation has resolved its more pressing difficulties. The agricultural nations have had their baptism of fire; and though India is the only instance of a country which has not been allowed to bring the value of her currency into proper relation with the currencies of the outer world, she, too, is in a position to do her mite, in bringing about an international reorganisation. Can it not be said that all that has happened in 1933 serves only to bring into relief the importance of the work that lies before the world and the change in the spirit with which it can be tackled?

* * *

The stabilisation of international exchanges is naturally the foremost preoccupation of world economy. Here we can set some store by the repeated reports of negotiations for an understanding between the United States, France and Great Britain, though so far as the immediate prospects were concerned, we had no option but to discount them. It is not a small gain that the possibilities of Mr. Roosevelt realising the objects of his recovery programme through the gold purchase policy are gradually getting exchusted. He has cut the Gordian Knot of indebtedness at home and abroad. He has reclaimed the banks from the fate to which their frozen assets had condemned them. He has broken through the army of unemployed, expanded employment, wages and production. He has foiled his envious critics at home and abroad by an adroit monetary diplomacy. Mr. Roosevelt is the sole instance of a statesman who had extracted tangible economic good from sensation. The time is, perhaps, come when he would treat a new World Economic Conference with helpful friendliness. The exchanges might before long be stabilised, and better understanding reached in the matter of import duties and restrictions to trade. International indebtedness has been deprived of its sting. Or, to vary the metaphor, it might continue to bark for some time; but it can never again bite. The new structures within the protectionist scaffolding are nearing completion. International trade has wellnigh abandoned the old silted beds and cutting the new channels deeper and deeper. Thus in the 'Xmas of 1933 hope and good cheer are not merely a religious duty or the result of habit ,but the dictate of objective study.

THE ASSEMBLY AND THE RATIO

The vote of the Assembly on the question of the rupee ratio cannot have come as a surprise to any one. The course of the Reserve Bank Bill both in the Joint Select Committee and in the Legislative Assembly left no room for doubt that on all points, material or otherwise, the Government could have all their own way. Even where unexceptionable compromises were possible, there was hardly any one among the present legislators who was prepared to bring pressure to bear on the Government. The London Committee is often regarded by public opinion in India as a packed one, the ignorance and spinelessness of which assured the Government of a unanimity of unquestioning support. But the much larger body of the Legislative Assembly with some pretensions to having been selected by a popular electorate has not shown itself to be a whit different from the Committees that had considered this piece of legislation in its earier stages. It is, perhaps, futile, from the point of effective reform, but certainly useful as a guide to public opinion in the future to recall the points on which the Assembly has so stolidly refused to stand by the popular viewpoint. First, on the question of the State *versus* the Shareholders' Bank, it might well be that the pros and cons do not admit of any decided preference. But it is certainly open to the Assembly to insist that the State shall reserve to itself the power of buying the shareholding after a stipulated period. The summary dismissal of this suggestion can be explained only on the assumption that our present legislators have the saving grace of a little introspection and postulate the reappearance of their own prototypes in the future assemblies of India. On no other ground could there be such abhorrence of even the contingency of the Reserve Bank becoming a State Bank.

* * *

Again, on the question of the ratio, the Joint Select Committee proved itself singularly unresponsive to public opinion in the country at large. But excuses were muttered in behalf of a few of its members that their votes were cast against the lower ratio in deference to the state of opinion in the province to which they belong. Much water has flowed under the bridge since; and the myth of Bengal's interest in 18d. ratio and Bengali's support thereto has been by now completely exploded. Now what was there to prevent the popular members of the Legislature from shelving the question of the rupee

rate except the Siren song of sweet-tongued Sir George! It is mentioned in the reports that Sir George spoke to such great effect that the waverers were reclaimed in favour of the Government proposal. We have scanned the reports of Sir George's speech carefully and must confess to our inability to find one valid argument against the Reserve Bank Bill leaving the question of the ratio as it is. Througout his five years term of office Sir George has shown hiimself an adept in describing the dangers to the public interest of speculation in exchange; and this time he reinforced his powers of graphic description by adducing the instance of an abortive attempt of speculators to impose upon the markets with the aid of a forged document. Possibly, Sir George Schuster succeeded in stimulating the sympathy of the House for a Government faced with such mean tactics on the part of speculators and in conveying the suggestion that the only way of rescuing them would be to hand over the present currency and monetary position lock, stock and barrel, to a Reserve Bank of his design. We do not see how the forgery of a letter by some mean tactician can constitute an economic argument to the contentions and demands of the Currency League or those who contend that the passage of the Reserve Bank Bill should not be used by the Government as an opportunity for confirming a ratio which is not demonstrably in the interests of India. If is often the case in a public debate that an irrelevant anecdote comes to decide the final voting; and we have no doubt that if the members of our Assembly were not swayed by other more extraneous considerations, they were the victims of incredibly clever story-telling.

DEMANDS OF AGRICULTURE

It was a highly auspicious moment when Lord Irwin launched the Royal Agricultural Commission, under the able guidance of Lord Linlithgow. Ever since, rural problems have shed their rustic inconspicuousness, and filled an important place in the programmes of politicians, statesmen, economists and sociologists. The high Government official is as much eager to turn his attention to rural problems as the "destructive" Congressman. It has become the pet passion of Sir Frederick Sykes, as much as of Pandit Jawaharlal Nehru. Both have the same end in view; but they differ in the methods to be adopted. The official initiative has supplied permanent organisations like the Imperial Council of Agricultural Research and the numerous—by no means too many—advisory committees in the provinces.

* * *

The non-official initiative of Pandit Jawaharlal and Sardar Vallabhbhai Patel, to mention only the two most prominent names, has roused the imagination of the intelligentsia and steeled the hearts of the farmers, in the demand for an early redress of agricultural wrongs. The non-official contribution has, in the very nature of things, to be indirect. The settlement issue in Kaira was unsettled by the lead, given by Vallabhbhai Patel, and this work earned for him the national title of Sardar.

* * *

Pandit Jawaharlal's work was more unostentatious, except in the estimate of officialdom. He organised the kisans in the U.P. into a spear-head of attack on the callous indifference of the U.P. Government. He was instrumental in securing, from a reluctant government, larger and larger remissions for the kisans during a period of devastating depression. What is even more creditable consists in the rich legacy of popular interest, which his agricultural propaganda left behind, in rural welfare. The taluqdars and the middle classes of U. P. have been so deeply impressed with the miseries of kisans that it resulted in the Agriculturists' Relief Bill, now before the U.P. Legislative Council.

In the Southern Presidency, Mr. S. Satyamurthi, another non-official stalwart, is busy with organising propaganda for a ten-year plan of rural uplift.

For research work, the Imperial Council of Agricultural Research can have few superior rivals, anywhere else. Sir T. Vijayaraghavachariar, as its Vice-Chairman, cannot be better substituted. But, the Council came into existense on the eve of financial depression, and it is, therefore, handicapped heavily for lack of sufficient and steady funds. At the last meeting of the Council's Governing body on November 25, it was decided to make a detailed representation to the Government of India asking that steps be taken to secure a definite income to the Council for a period of five years from 1934-35. If the Council's work is not more spectacular, the provinces are responsible. It is only of late that provinces have roused themselves in utilising the services of the Council especially in animal husbandry. Even now, local work is not being done in an adequate measure and in a pointed manner, mainly due to the shortage of funds. The Government of India is, it is believed, now in a better position to comply with the Council's request.

* * *

Another direction, in which the Council has displayed its alertness, is the proposed co-operation with the two English professors of economics and statistics, who will arrive shortly, for making a reconnaissance survey of the present economic conditions and changes which have taken place during the last twenty years, and plan a general economic review and census of production. The desire of the Council is mainly to assist this enquiry, so that the agricultural aspect might be adequately dealt with. This self-appointed task is imperatively necessary, lest the review should end in airy something of a highly technical and scientific lore, having no immediate bearing on practical problems of day-to-day utility to the farmer.

* * *

Whatever the result of the economic enquiry, there are other problems which more immediately concern the welfare of the farmer. The question of "Planned" agriculture for India is rather remote. But, an adequate provision of credit, through the setting up of suitable machinery, and the establishment of marketing boards will ameliorate the parlous condition of the farmer. Indications are not wanting that attempts are being made in the right direction. As pointed out already, two Bills, affecting the well-being of the farmer, are before the U.P. Legislative Council. It is not proposed in this article to go into the whole matter, critically. Its main concern is with trends. The U. P. Bills are merely protective, in so far as it is realised that the farmer should be saved from the clutches of the moneylender. Agriculturists, who have contracted debts before the depression set in, stand now to lose all their property on account of the sharp fall in prices. To meet the interest charges, they have to part with more and more of their produce, than before. To get discharged from debts, they have to sell away more land, than has been the case, at the time of incurring debts. But, the measures, which are designed to protect the landed debtor from the rapacity of the money-lender, are for a short duration. Above all, they deal with agricultural indebtedness. But, a credit structure for the needs of agriculture is of more serious importance.

It is no new experience for the Government to frame laws for India on foreign models, to wit, the Press Law, fashioned after that of autocratic Austria of the Pre-War days. In recent years, India is much beholden to British practice in currency and exchange affairs. It will not be too much, therefore, to expect provincial governments in India to emulate Britain in agricultural legislation. For the information of agriculturists and their members in the various legislative bodies of India, the following ex-

tracts, from the *Westminster Bank Reveiw* for November, are given below. They refer to the results of the British Agricultural Credits Act of 1928, under which The Agricultural Mortgage Corporation was set up in the same year.

* * *

"At the date of the latest balance sheet (March 31, 1933), total loans to farmers were shown at £9,485,475, of which £9.451,837, was in mortgage loans. The latter are made for periods up to sixty years, are repayable by equal half-yearly instalments of principal and interest combined, and are granted up to two-thirds of the value of the property as certified by the Corporation's surveyor. Improvement loans are granted for all kinds of improvements, whether to land or buildings, for periods up to forty years. Such loans must be approved by the Ministry of Agriculture and must be calculated to improve the annual value of the property by an amount exceeding the annual charge for interest and repayment."

* * *

In the matter of short-term credit, the Act discourages farmers to look for assistance from merchants, private guarantors or other possible alternatives. "To facilitate borrowing by agriculturists at the banks, a new form of charge, called an agricultural charge was introduced. It may cover any type of possessions, including stock or crops or fixed assets, and may be for a stipulated varying amount. The charges must be registered at the Land Registry, but an attempt was made to avoid the defect of publicity and stigma which attaches to the bill of sale (formerly the only method of taking a charge over a farmer's stock or crops), by the provision that publication of agricultural charges is unlawful and subject to fine." But, the secrecy of the registration of land charges is frustrated by the inspection by Trade Protection Societies.

* * *

Regarding the marketing of agricultural commodities, the Parliament passed the Agricultural Marketing Acts of 1931 and 1933. Under these Acts, various schemes for marketing milk, eggs and poultry, potatoes, bacon, pig, wheat and beet, were set up. The 1933 Act improves that of 1931 by restricting imports of competing agricultural commodities. The aforesaid article, *apropos*, this subject, says :

"Co-operative marketing will also help towards solving the credit problem. The marketing organisations will be in a position to buy a farmer's crops the moment they are produced, and thereby put him in funds to meet his needs for seeds, labour, and his own living until the next harvest. The Boards themselves will be better organised for borrowing than the individual farmers, and therefore will have no difficulty in obtaining loans against the produce they have bought from the farmer."

Leading banks subscribed to the capital of the Agricultural Mortgage Corporation. Its share capital was only £650,000. But, its resources have been augmented by the issue of debenture stocks to the investing public, to a total sum of £10,500,000.

* * *

Would that every province of India had an Agricultural Mortgage Corporation with capital resources, at the outset, to the tune of a year's revenue of the province. Should the Government make an attempt in this direction, its popularity will ensure immediate success.

THE CAPITATION TRIBUNAL

The publication of the Report of the Capitation Rate Tribunal and the decisions of the Government of India and His Majesty's Government thereon have, for the time being, drawn to a close issues which have been outstanding for nearly three decades. It has been recognised for a log time both in India and in England that the manner in which expenditure on army and defence is incurred in India and in England and the hazy demarcation between Indian and imperial interests make it inevitable that without adequate inquiry there should be a good deal of unfairness in the allocation of the various items of expenditure between the Indian and the British exchequers. The position of the Government of India as a subordinate branch of the Imperial Government and the natural tendency of the stronger to encroach upon the resources of the weaker made it more or less certain that the Indian Government have in the past been obliged to shoulder more than their due share of the burden of military and defence expenditure. The Indian Government, despite its foreign constitution, have, since so early as 1907, been fighting the claims of the British War Office in respect

of many items, particularly those known as Capitation charges which represent the cost of raising, training, equipping and transporting annual relief and drafts from England. Inquiries which had been conducted earlier and the arbitration, which had been resorted to as a result, had not yielded satisfactory results ; and the Government of India have persisted in their claim as regards the capital charge. The Indian Government had naturally been supported by public opinion in India ; and though the India Office has often consented to espouse the cause, the War Office had in the past proved too strong for it. The inquiries connected with the Reforms and the reports submitted by the various committees instituted from time to time had gone into the question in detail and had necessarily to protect against the manner in which an undue share of the military burden had been allowed to devolve on the shoulders of the Indian taxpayer. Though the Simon Commission was inclined to draw a sponge over the unfairness to India in this regard, the Sankaran Nair Committee argued our case with great reason and enthusiasm.,They drew special attention to the fact that, while India was paying, under protest, and without prejudice, this capitation rate, the rate was actually increased from £7-12-0 to £11-8-0, which was again increased in the post-war period to £28-12-0 and with retrospective effect as from April 1st, 1920. Though later the per head rate has been abandoned in favour of a lump sum payment of £1,400,000 the injustice to India in regard to capitation rates continued.. The Defence Sub-Committee of the Round Table Conference recommended insistently that this matter should be referred without further delay to a special tribunal and that action should be taken on its findings.

* * *

The first sign of some fair and amicable settlement of these disputes was the announcement of Mr. Wedgewood Benn in the House of Commons on April 20, 1931 that "It has been agreed to refer to an independent tribunal the question of the disputed liabilities of the Government to pay His Majesty's Government the present annual capitation rates in respect of training British army recruits and also of India's claim for a contribution from Imperial revenues towards the military expenditure in India." It is necessary to point out at this stage that before the announcement of Mr. Wedgwood Benn was made, the Government of India's claim to the abolition of capitation payments had been met with a counter-claim on the part of the Air Ministry and the British War Office that the rates at present paid did not recoup the British Government for the expenditure which they are intended to recoup.

* * *

As a result of this tactics of the War Office, the terms of reference to the Capitation Tribunal had to cover 4 main points, namely,

(*a*) Whether, and if so on what basis, capitation payments should continue, namely, the contribution paid from Indian revenues towards the expenses borne by the War Office and the Air Ministry in recruiting officers, soldiers and airmen in England and training them for service in India ;

(*b*) India's claim that a contribution should be made from Imperial revenues towards military expenditure from India revenues ;

(*c*) The claim of the War Office and the Air Ministry that India should pay a direct contribution towards the cost of the Imperial reserves ; and

(*d*) Whether the sea transport contribution paid by the War Office to India should be continued.

The tribunal has had to give their decisions on all these points. As regards capitation payments, the Tribunal found on the main question for the principle that the cost of recruitment and training should be allocaed between Great Britain and India in proportion to their respective establishments. To decide this, it would be necessary in the first place to fix the period of training for which the cost should be charged to India and to determine whether India should be allowed a rebate proportionate to the terms served by a soldier in the Reserve. As regards the former, the recommendation of the Tribunal was in effect a *via media* between the presumably extreme claims of the War Office and those of the India Office. In the matter of rebate for reserved service, however, the Tribunal found in favour of the Indian claim. The second question refers to India's claim for a contribution from the Imperial revenues towards the military expenditure incurred by her. Here no attempt has been made to fix the amount which India shall receive from the Imperial Exchequer. The Tribunal have contented themselves with pointing out the factors that should determine such contribution namely, (*a*) that the army forces in India constitute a force ready in an emergency to take the field at once, a position which does not exist elsewhere in the Empire, and also a force which is specially available for immediate use in the East and which has, on occasions, been so used and (*b*) that India is a training ground for active service such as does not exist elsewhere in the Empire.

* * *

In spite of the fact that tangible gain has not yet accrued to India as a result of the findings of the Tribunal, it is well to remember that a somewhat vexatious controversy has now been ended.. The demand for a contribution from the British Government towards the army expenditure in India implies necessarily that the Indian army is more than what is needed for the emergencies of internal disorders and the possibility of external attacks, in other words, its size is not determined solely by Indi'a requirements but also by emergencies of a world nature.. The Simon Commission took the view that the size of the army in India was not more than what was indicated by Indian needs. The opposite view was argued, and wellnigh established, by Sir Sankaran Nair, who quoted the authority of Lord Curzon to show that the Government of India had always thought of the possibilities of the Indian army being drafted for service of the Empire far away from its borders. The Tribunal has not gone so far as to say that the War Office is deliberately keeping this

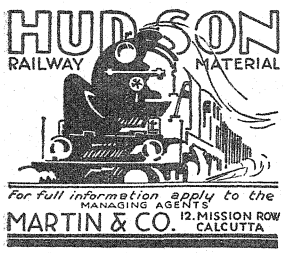
CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

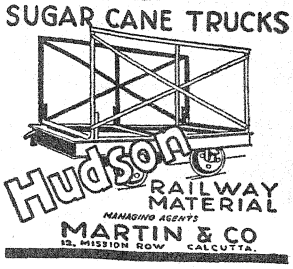
"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised :—1,760 Tons—Sizes 5" to 20" diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.



Clive Street Gossip



Eavesdropper wires from Delhi :

I believe that this is the last issue of *Indian Finance* for this year; and it is meet that I tender my readers my sincerest wishes for all that is bright and sunny in life in the New Year. After these cheerless and dark months on months, there is need for warmth and light and vitality. Between the staff of *Indian Finance* and its readers we have ever tried to avoid the down-and-out feeling. To gloom and pessimism, we have never given way. Are you down-hearted?—has been the challenge time and again. Every time we have shouted with lusty throats "Never." It is not that we have not given full value to all portentous features in the domestic and world situation. It is not that we have taken any other than a realistic view. It is because we have felt that even as life without philosophy were chaos, so are higher outlook and philosophic standpoint essential for proper appreciation of economics. Philosophy teaches us that world forces cannot be all futile, that world happenings cannot be all purposeless, and that world destiny cannot be disaster. If forces appear for the moment to be futile, or if developments seem awry, or if world destiny is by all indications ominous and dark, we have, perforce, to conclude that it is our vision that is defective, our understanding that is incomplete and our philosophy that lacks faith.

* * *

Correct philosophy heartens one with the conviction that it is not the world but we that are wrong and will urge that, if only we knew how to make our very troubles the stepping stones of our onward career, life has no retrogression but only ever-emphasised progress. Adversity hath its uses; and the continued world depression of the past four years has this great use, that in the evolution of industrial, financial and agricultural technique on a scale too stupendous for words, the time has arrived for pausing and enquiring what further adaptation and change are urgent and imperative. The excesses of chaotic and uncontrolled economic activity have produced the need for orderly and scientific economic planning. What is economic planning but comprehensive co-ordination of varied sections and aspects of national economy and interlinking, as in an organism, of various economic units into well-proportioned world economy. In brief, economic planning is nothing less than philosophic understanding of economics. It means strengthening of all weak links alike in individual, national and international economy. It is vested interests that hitherto were monopolising all attention and all good things of world. A few in each country were rich, fabulously rich, the many were poor, pitfully poor. By the same token, a few countries in world were highly prosperous, while many were steeped in poverty. The rich amongst individuals and nations have been made to realise that their riches are transitory and evanascent, unless the economic stamina of the poor members were placed on intrinsically sound basis. It is no longer a question of charity or generosity on the part of affluence towards indigence. It is one of self-preservation.

* * *

A decade ago Socialism was suspect in conservative circles. Everyone talks to-day of economic planning. And let there be no mistake about it, economic planning is only verbal variant of Socialism. Is capitalism lord and master of society? Universal recognition of economic planning and its inevitability furnishes, in clear and ringing terms, the answer in the negative. As we enter the New Year, we are at the threshold of an era which will see the world achieving higher degree and richer proportion and better distribution of economic well-being. And the proud banner flies over the world with the magical phrase, "Economic Planning", writ in brave and inspiring letters. *Economic Chaos is dead, long live Economic Planning.*

* * *

It is in this assurance that I wish everyone of my readers fruition of ambition and of every heart's wish. May we strengthen our hands and inspire our efforts in our mission to formulate correct economic planning for India in sincere and complete belief that India holds the key to world depression and that well-planned economy of India is *sine qua non* of well-planned economy of the world.

OLYMPUS

(From Our Correspondent)

New Delhi, December, 19.

The Battle of the Ratio—Sir George Schuster's Elation—Ranga Iyer pricks the bubble—smooth sailing for Imperial Bank Agreement—Indo-Japanese Agreement again to the fore—Can the Japanese Government bind the Spinners?—Signs they can, and will—Drafting afoot?

* * *

Another red-letter day in the history of the ratio controversy. Sir George Schuster felt elated at his great success in commanding a bigger majority than Sir Basil Blackett could.

* * *

But it was from a friendly quarter that the bubble was pricked. Mr. C. S. Ranga Iyer who had, in season and out of season, cheered Sir George Schuster declared "If Sir George has had the experience of Sir Basil Blackett, he would have understood our point of view and accommodated us".

* * *

That was the essential difference. Sir Basil Blackett fought friendless but made friends and won a victory in a Swarajist-ridden Assembly. Sir George Schuster began in a friendly atmosphere and ended with loss of friends.

* * * * *

Sir Cowasji Jehangir was told that his questions were 'absurd'; Mr. Mudaliar was called inconsistent; and Mr. Mody one who shirked the issue. This trio, which stood by him through thick and thin, is leaving Delhi embittered against the Finance Member.

* * *

But if Sir George's tactics brought this about, and his "loss of self-restraint" made a painful impression, his advocacy of his cause was throughout brilliant. He never wavered in his plea and never failed in producing the most plausible arguments in support of his views.

* * *

The Assembly did not, however, vote on the merits of the case. It was all a question of what patronage government could yield to those who held the key to the lobby. The Europeans were safe, except for Mr. Ramsay Scott. Nominated non-official group recorded the defection of Mr. Sarma, in addition to the usual loss of Mr. Joshi's vote. But the danger lay in regard to the Centre Party.

* * *

The opposition had scored a tactical victory over Sir George Schuster by entrusting the amendment to Mr. Sarma, thereby giving the Centre Party the chief credit for moving the most important proposal. There were certain members in this Party who would vote with Government, provided it was not made a party question. So Government influence was directed towards that objective.

* * *

This could not be done, so long as Raja Bahadur Krishnamacharya, the Leader of the Party, was not won over. Arguments were used to win this Ex-Judge of Hyderabad. This was the signal for party split; and though the majority went with Mr. Sarma, the minority voted with the Government. Mr. Yamin Khan's United India Group was easily secured on the plea that Mr. Sarma's amendment did not help the agriculturist.

* * *

So the Government Whips, who felt that their position was not safe, were now happy over their success in driving a serious wedge into the Opposition camp. The amendment of Mr. Sarma, which owed its origin to the advice tendered by *Indian Finance* to the Members of the Assembly, was defeated by a majority of 18 in a house of 108.

The sixteen pence ratio proposal of Mr. Raju got a better reception because Government was able to allow some of its elected supporters from the Punjab and Bengal to vote for it in order to satisfy their constituents. The majority for Government even then was safe, being 10.

* * *

Now followed the anti-climax. The debate lost its interest and the Imperial Bank Agreement had smooth sailing. There is little chance of any amendments being carried by the Opposition and the Bill will become law next February after the Council of State formally blesses it with its approval.

* * *

The result of the Assembly debate has not caused much disappointment to the Opposition parties. They did their best and gave the Finance Member as uncomfortable a time as they could. They hoped for nothing more. But the echo remains "is this the end of the ratio controversy?"

* * *

Hereafter the Indo-Japanese negotiations will again be on the Board. A fortnight's respite has already been too taxing for the Government of India. The fault certainly lies with the Japanese side. The Government of India has been able to take a firm attitude and its position is not subject to any further modification.

* * *

The Japanese Government has informed the Government of India of their willingness to accept the proposals but the Spinners of Japan are still adamant. A treaty can be concluded without reference to the Spinners. It can be ratified without any parliamentary sanction, because under the Japanese constitution all diplomatic relations are the direct concern of the Emperor and do not go to the Diet for ratification.

* * *

But can the treaty be enforced by the Japanese Government? They can control exports and imports but they cannot force the spinners to buy Indian cotton. And until Indian cotton is bought, the Treaty has no meaning for India. This is the dilemma that has held matters up so long.

* * *

The Government of India is not concerned about the domestic affairs of Japan. It believes that if Tokio authorities take a firm attitude, they should be able to bring the Spinners to a reasonable frame of mind. There are Indications now that the Japanese Government will take up this attitude and enter into an agreement with India.

* * *

The drafting of the Treaty will take some time. The Japanese think it is 2 weeks' work but the Indian side fixes a month's limit.

"HILL-BIRD"

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

SOUTH INDIA

(From Our Correspondent)

Madras, December, 18.

In the matter of land revenue remission the administrative cart has begun to creak out of the rut. A decision has at last been made by the Madras Government to remit that portion of the land revenue the collection of which was suspended last year. There can be no question, when there is a ragng campaign for the remission of a larger amount of land revenue over a long period, of recovering dues which were manifestly incapable of payment by the ryots. But the Government had a sneaking love for keeping the bad debts—perhaps the term no debts would be more appropriate—on their balance sheet. It would have been an act of grace if the decision to forego permanently the suspended revenues had been made without this unseemly procrastination. Possibly, the Government fight shy of it in the belief that such action would be a virtual admission of the case for remission of land revenue. Eventually, Governmental prestige, which can prevail perhaps, against political vanity, has had to bow to economic necessity. And so the claim to the suspended revenue has at long last been foregone.

That necessarily, leads on to the question of the remission of land revenue. But in between the two there are claims of areas which had not been afforded relief in respect of the revenue of last year. The Government are yet to make out a case for the discrimination which they made at the start and which they have intensified now by their latest decision. No one in South India is aware of any serious difference in economic conditions between one district and another, such as would justify the differential treatment accorded by the Government. And yet the suspension of revenue was ordered in certain districts and now they have been confirmed in enjoyment of such relief. Though in the initial stages of such a policy, expediency may well be allowed to be the sole determinant of the current of events, it is certainly up to an enlightened government after a certain time to accord equal treatment to people who are equally circumstanced. Whatever may be done in the future in regard to the larger question of remission of land revenue throughout the province, it is necessary that Government should take adequate measures to redress the inequalities which they have heedlessly created and extend the relief granted to some districts to others whose economic conditions are by no means different.

As to the larger question of relief in the ryotwari areas in the payment of land revenue demand in the current fasli, it is generally expected that the Government will be able to reach a decision before the first week of January. In their orders regarding the remission of suspended revenue, the Government has stated clearly that the further proposals of the Government regarding land revenue concessions will be placed before the Finance Committee at an early date. It is an accepted rule of constitutional procedure that in changes affecting expenditure the Finance Committee should be consulted by Government. Apart from the incontestable facts of the case, the Government themselves have virtually admitted the validity of the claim of the agriculturists by suspending a part of land revenue in one year and remitting it altogether in the next. They might, therefore, be said to be estopped from raising the question of the need for relief in agricultural areas. It is only open to them hereafter to put in the plea of budgetary necessity for allowing such a large part of the financial burden of the province to rest on the shoulders of the agriculturists. It might be conceded that, if really the present state of expenditure in the province is irreducible and there are no alternative sources of revenue for the Government, the agriculturists must bear their part of the burden. In bringing the matter before the Finance Committee, the Finance Member will, doubtless, make a complete statement of the position, point out clearly the amount of revenue, and also the incidence of such loss on the spending departments of the Government, partciularly those in which the representatives of the people may be supposed to be specially interested. It is well known how the Finance Member and the spokesmen of the Government have always tried to make out that the loss in revenue should be made up in entirely by cuts in Part II schemes. It might well have been that in the past the prospect of reduction in Part II expenditure had nearly frightened

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out

WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

Complete catalogue sent free on application.

away the members of the demands for remission of land revenue. But with the growing agitation in favour of relief for agriculturists, they will now be able to accept the measure as a necessity and to turn to ways and means of reducing the full impact of decrease in revenue on the schemes of popular interest. It has to be remembered, in the first place, that many of the schemes that are so threatened with reduction of outlay might well be treated as capital expenditure, there being no question, as in Bengal, of the capacity of the province to find money for service of the new loans. Secondly, the fact that Madras has a fairly comfortable Treasury balance and that the fear of such balances being trenched upon by revenue deficits is a thing of the past suggests that Part II schemes need not be victimised exclusively in the interests of remission of land revenue. The Finance Committee will have done well by the country if, instead of merely trying to suggest ways and means of financing Part II schemes with other than the current revenue, it could carry war into the enemy's camp and press aggressively for reduction of expenditure in the Reserved Departments. The tactical advantage of such a procedure would lie in the fact that the Government would, if sufficient pressure were brought to bear upon them, show themselves more accommodative to the popualr representatives and their demands in the public interest.

It has to be remembered that if the Government now give in to the demand for remission of land revenue that would be the solitary act of help to agriculturists, of which the Government would be guilty. The Government are probably not aware that even among the Provincial Governments of India they have the distinction of being most indifferent to the crisis in agriculture. From Bengal we hear constantly of the need for economic planning and developing the economic potentialities of the province according to a scheme in which the needs of agriculture will not by any means take a secondary place to the needs of industry. In Bombay, Sir Frederick Sykes has initiated during the last few months of his term of office a general movement for rural reconstruction, which might be expected to be carried on by his successor or at least by the public men, whose zeal in its cause Sir Frederick has before his retirement succeeded in creating In Bihar and Orissa the position of the agriculturist has been substantially improved by the vast expansion that has taken place in the sugar industry as a result of protection and the fillip which the increase in the number of sugar factories has given to sugar cane cultivation. The U. P. Government has not been content with the advantage that it has had in common with Bihar and Orissa in the matter of the development of sugar cane cultivation. There is clear evidence that for some long time the Government have been clearly studying the problems of the the agriculturist and have been studying measures that might bring tangible relief to him. The legislation, that is now being discussed by the U.P. Provincial Council is, perhaps, not remarkable for any vast schemes or any measures of bold reform. But in a hundred little ways it assures the agriculturist of an improvement in his status and conditions ; and the cumulative effect of these benefits will, no doubt, be appreciable before long. It is, indeed, a great gain that agriculturists, who are invariably indebted to the money lender, could set limits to the rapacity of his age-old tyrant and prevent him from acquiring more than his due share. This is hardly the place in which to go into all the measures of relief which the U. P. Government have designed to give to the agriculturists of this province. But they are quite relevant when we see the Government of Madras not only innocent of any measure of relitf but persisting in their refusal to give a remission of land revenue, which in the present circumstances no agriculturist can pay with the best will in the world.

The speech of the Chairman of the Madras Chamber of Commerce on the occasion of its annual meeting is out of the common run of speeches from the Presidents of commercial bodies in this country. There was a time when it used to be a general grouse, and particularly that of *Indian Finance*, that in India the custom of heads of business houses and commercial bodies affording a review of the year's developments in matters of trade and industry had not grown up in this country to the same extent as, for instance, in Great Britain. Thanks, possibly, to the example of *Indian Finance* and the facilities it gives for any careful students in India to make a coherent summary of events during the year, we have swung to the other extreme of persons who are not quite competent for the task attempting to act the role of profound students of economics. Mr. F. Birley, the President of the Madras Chamber of Commerce, has provided a noticable exception to this rule. The form and substance of his speech show that he is not content to defer to custom or to follow an example. Within a refreshingly short compass, he has afforded a useful review of the trades and industries in which Madras is interested. There is, indeed, much in his address that is a common factor to all such speeches by the heads of European commercial bodies in India. About boycotts and political strife, about the ratio and the Reserve Bank, one could easily guess his opinion ; but his recapitulation of the fortunes of the trades and industries is, indeed, specially illuminating. He calls attention to the fact that though this year's crop of groundnuts was some 20 per cent. in excess of last year's crop, exports were nearly 30 per cent. in excess of last year's figures. He ended, however, with a note of pessimism, referring as he did to the fall in groundnuts prices, that has happened during the last few months and the reduced prices going below the cost of raising the crop. In the tanning industry, he justly makes reference to the spirit of co-operation which the merchants in Madras evinced, as soon as they found that the increase in prices, which happened after the abandonment of the gold standard by America was lost and yielded place to a steep decline. He also emphasised to the need of revising the customs valuations in respect of hides and skins. The export duty, he said, levied on the raw goods is based on a tariff valuation which is supposed to represent approximately the current market value. During the year 1933 these valuations were based upon market values current towards the end of 1932, when prices were about 25 per cent. below where they stand to-day. Unless therefore, the tariff valuations are raised to conform with the now current values, the 5 per cent. protection enjoyed by Indian tanners will obviously shrink to 4 per cent. or slightly less, and the higher the prices go during 1934, the smaller will be the measure of protection afforded by the tariff. In the tea industry, Mr. Birley was happy to recall the substantial improvement that has occurred as a result of the restriction scheme. About the attitude of Japan to India's policy of protecting herself against dumping he recalled an interesting French saying "This animal is wicked ; when he is attacked he defends himself." Mr. Birley's speech on the occasion was an apt and pithy one.

GREAT BRITAIN

THE CONSORT OF EUROPE

The week's developments, regarding Disarmament are, much of it, "aside" or behind the screens. As feared, the League of Nations is being obliged to yield place to the consort of Europe. The visit of M. Avenol, Secretary-General of the League, to Rome ostensibly to attend a diplomatic funeral but to discuss the re-establishment of contact with Germany, and the subsequent conversations between Signor Mussolini and Sir Eric Drummond, the British Ambassador in Rome and the whilom Secretary-General of the League of Nations, have not a little to do with the Duce's explaining away the Fascist demand for an immediate and drastic reform of the League of Nations. Signor Mussolini has, obviously, had an understanding, so that he can now say that the reform of the League is not to be immediate, that Italy realises the dangers of precipitate actions, and that, as for its being drastic, Italy has not yet decided upon her own proposals, but is anxious to hear proposals of other countries.

This interpretation, by Signor Mussolini, of the Fascist Grand Council's vote, was received in London as welcome showers by parched-up land. After pretending to expose the re-armament, in direct and excessive contravention of the Versailles Treaty, by Germany, the British Government has now started playing second fiddle to the Italian, by cooing that the Italian view closely approaches that, taken up by the British Government, on the need for League reform. Any other attitude would not suit the British Government. After the disclosures, made by Mr. Lansbury regarding the British manufacture of armaments, both for domestic consumption and export abroad and the severe castigation, by Sir Stafford Cripps, of the British disarmament policy, an escape behind the shield of Italy is welcome in the extreme, Judging by Mr. Baldwin's fear of jeopardising world peace by further disarmament by Britain ; by the need of British Imperialism for the air-bombing of Civil population on the Indian Frontier as a token of air police work ; and by the necessity of having to safeguard sea-communications for protecting British territories, all over the globe, not more than 10 per cent. of which is developed,—it can be realised that Britain's object was not so much to practise disarmament, as to manage it, with a view to influence the reduction of armaments in foreign countries. Britain had simply to pit France against Italy on the one hand, and Germany against France on the other. The resultant mutual curtailments of armaments as between France and Italy on the one hand, and Germany and France on the other, should leave the British strength in armaments ever so much stronger than her rivals.

The interested Press widely broadcasted the fact of Mr. Ramsay MacDonald's rating Mr. Lansbury for incorrect statement. The hollowness of the propaganda was exposed in these columns, ere now. However much the minions of British Imperialism may throw their bouquets on the Prime Minister his pleas have brought no conviction to the minds of any, but the denizens of his forest. Sir Herbert Samuel, said at Darwen, on December 2: "The Disarmament Conference is in great danger of failure, and if it were to fail all nations would begin to increase armies, navies and air-forces. England is beginning to do that now and, if all countries follow this example, it will end in another great catastrophe."

France is the only Power that is not jubilant over the tragedy of Disarmament. But, in her isolation, she has been obliged to revise her pre-war lessons, and is polishing her chess-board for the balance of power in the consort of Europe.

Germany has been encouraging France towards this end, in a subtle manner. Germany's game is to plan any scheme, and sign any agreement, but that of disarmament. To Germany, diplomatic documents are but scraps of paper, if, and when, it suits her to treat them so. For the matter of that, every nation can brush aside treaties as mere scraps of paper, when it is inclined to heed the call to arms.

Thus, the old-fashioned secret diplomamy dies hard, nay, has resurrected. The modern conference method is dead, if not yet buried. Ambassadorial conferences are daily being held in London, Rome, Paris and Berlin. The presence of Lord Tyrrell in London, to explain the French position to Sir John Simon, betrays the wide gap between the French and British policies.

The consort of Europe has no room for the United States of America or Soviet Russia. But, neither of them would care to join it. Europe, however, need not mind them in times of peace. But, if war should break out,—all indications point to such an event sooner or later—overtures will be made to enlist sympathies of the one or the other or both, by the contending parties. Till, then, they may be safely ignored.

Newfoundland Deposed

The oldest Dominion of the British Commonwealth of Nations has fallen on evil times.. It had to surrender its sovereign status and assume the role of a Crown Colony. In some respects, it is inferior to other crown colonies, in that it will lack even the so-called representative institutions. Its claim to distinction to-day is that of the poor relative in the

household of the eldest sister in the British Commonwealth. On December 7, the House of Commons passed the financial resolution of 227 to 38. Britain has, thus, assumed financial liabilities that may amount to £2,000,000 to meet the Dominion's budgetary deficit during the three years of the agreements. This total includes £550,826, already advanced by United Kingdom to Newfoundland, and which is now to be treated as a free gift. The condition of Newfoundland, at present, may be likened to a bankrupt native State in India, where the despotism of the ruling prince afflicts the State with frequent insolvencies necessitating the British Government of India to take over the administration and liquidate the liabilities. In the case of Newfoundland, the inherent weakness of Indian despotism is surpassed by an enlightened, responsible democracy. After all, the loss of caste by Newfoundland may prove a blessing in disguise. The island is too small to develop its resources through its own initiative and effort. As Earl Winterton remarked during the debate in the House of Commons, it is to be hoped that Britain would not shoulder the additional responsibilities without vigorous action for the development of Newfoundland. The present incumbent government under Mr. Alderdice, the Prime Minister, has essayed to rectify the load of maladministration of the past Governments. Ministers' salaries were reduced by 30 per cent. ; pensions cut from between 20 to 45 per cent. ; expenditure on education and post office and telegraphs reduced by half ; and public charities curtailed by 30 per cent. The Amulree Commission testifies, moreover, to the fact of the people going under-nourished and without adequate clothing. This much of chastening and the efficient administration by the Council of Six, commissioned by the King, should restore financial equilibrium, and the concomitant prosperity to the fallen island.

The other important work of the Parliament was in connection with the debate on the second reading of the Unemployment Insurance Bill. The main contribution to the debate was by Mr. Bevan, the member for Ebbow Vale. He declaimed that the longer a man had been idle, the heavier the crime which Society had committed against him. The Chancellor of the Exchequer met satisfactorily all the financial arguments against the Bill.

Among the interesting questions, which were put and answered was the one, regarding debts, arising from margin accounts on stock exchange speculation for the rise and fall in quoted securities. The Conservative member for Warrington, Sir Park Goof asked the Government whether in view of the Government's decision to discountenance lotteries and sweepstakes, provision would be made to withdraw recognition in law from the aforesaid debts. But, Sir John Gilmour evaded an answer to the question, and said that the Bill, relating to lotteries and betting would be introduced soon after the recess. Sir Park Goff, thereupon, shot a supplementary question. "Is he aware that the amount of money in stock exchange gambling is far greater than that risked in lotteries and sweepstakes?" The question was too inconvenient for the Government to make any answer.

Another interesting question, which threw sidelight on British propaganda against Japanese competition, was put by Mr. Kirkwood. He said that the Japanese engineering industry worked its employees 60 hours a week for wages of 25 shilling for skilled mechanics. But, Colonel Colville quoted from the monthly Report of the Tokio Chamber of Commerce that the daily wages for skilled engineering hands, in Tokio in September last, ranged from 3.03 yen to 4.94 yen.

Indian Cotton for Lancashire

The Indian Cotton Enquiry Committee has unanimously approved and adopted the policy recommended by the recent Textile Mission to India that the Lancashire cotton trade should appoint two cotton commissioners to act as a liaison organisation in India, and that steps should be taken immediately to encourage the larger use of Indian cotton in Lancashire by arranging for the holding of adequate stocks in Liverpool or Manchester. The Committee met the representatives of the Liverpool Cotton Association and the meeting was described as very satisfactory. Sir Richard Jackson, Chairman of the Indian Cotton Enquiry Committee, announced that he would attend a meeting of the Indian Central Cotton Committee to be held in Bombay in January, and the Lancashire committee would exhibit a large selection of Lancashire cloths, made from Indian cotton, at the forthcoming British Textile Exhibition, to be held in London.

Backwash of Gold

For the first time since Great Britain went off the gold standard in September, 1931, India has imported an appreciable consignment of gold. An Indian gentleman has bought £1,000 of gold in London.

thwart the magnificent effort of President Roosevelt long time, the Press has pursued to mislead the public, through its weapons of *suppressio veri* and *suggestio falsi*, as to the true significance of the results, achieved by the programme of the Administration. Even the Press across the Atlantic has joined the lists against President Roosevelt's policy. That is but natural. The fact of the matter is that capitalism has sensed imminent peril, in the President's national recovery drive, to the continuance of its absolute power on the *laissez faire* basis. No wonder, therefore, that, every Sunday afternoon, Father Caughlin, however seemingly an interloper in the estimate of sound-money men, "extols the merits of inflation and consigns the bankers to hell on a nation-wide hook-up to a vast and appreciative audience of some 30 millions." The performances of Wall Street in recent times and the disclosures before the Senate Investigating Committee, some little time back, eminently warrant the Father's diatribe. In popular parlance, New York displaced Chicago, and bankers have substituted its gangsters.

But, at long last, opinion of eminent persons, impartial by virtue of their positions in life and by force of habit of the nature of their day-to-day work, is seeing the light of day. Mr. Harold Butter, Director of the International Labour Office, on return from a recent visit to the United States, spoke at luncheon of the Industrial Co-partnership Association at the Holborn Restaurant on December 7, describing the crisis, in America, as mainly due to the tremendous and rapid mechanisation of industry without any kind of limitation. This remark is eminently true, and it should warn the nations, aspiring to intense industrialisation through wholesale mechanisation. Mr. Butter, calculated that the real wages of those employed in the States in 1929 has been reduced by 52 per cent. in March, 1933, as compared with a reduction of only 2.5 per cent. in Great Britain. The acuteness of the American crisis can, therefore, be well gauged. Even in the States, where capitalists are dead set against the Administration, there are employers and employers. Some of them told Mr. Butter that the saving of cost to industry, as a result of some of the provisions and changes of the Recovery Act, would enable them to carry shorter hours and higher wages. As for his judgment upon the work of the Administration, Mr. Butter says:

"It is too early yet to judge the results, but one can certainly say that the situation in America to-day is infinitely better than it was last March. The general employment figure has gone up. The payroll has gone up, and the production figure has increased. The general belief over there is that the code system in America has come to stay in some shape or form. I am not sure that some of the lessons which have emerged from this American experiment may not have at least a partial application elsewhere."

Equally enlightening are some of the remarks of a British stockbroker of a well-known English firm, who recently visited the States. He is largely in sympathy with the capitalists; but, on that score, some of his observations have a significance, all their own.. Writing, in the *Financial News*, of President Roosevelt, he records:

"It is impossible not to admire his courage. He assumed power in an hour of crisis and collapse. Everything was thrown into his lap. Every section of the community, not excepting Wall Street, turned to him for guidance, for leadership, for salvation. He shouldered every burden with a smile, and has been shouldering them, with an avidity that is almost disquieting, ever since.

It is not difficult to discern the political philosophy which gives rise to his actions. He is a radical. Impatient of tradition, an enthusiast for experiment, a believer in "progress." Although at heart he is no believer in "Collectivism," but would rather see a revival of the bourgeoise and the small farmer on the basis of individualism, he dislikes socialism less than big business, "extortionate" profits, graft, and bankers—terms which in Washington are practically synonymous.

Later on, he admits that wages all over have undoubtedly risen, and employment has gone up. He also testifies to increasing retail sales, and he forecasts that that is bound to affect production favourably during the next few months. Regarding the monetary policy of President Roosevelt, he says that "While he is, in general, opposed to the moneyed interest, he is not himself a fanatical inflationist." But the general public is against the Sound Money School, as it has not yet evolved an alternative constructive policy. It is, moreover, associated with Wall Street. Regarding inflation, the opponents of the Sound Money school "can point with considerable force to the uncontrolled invisible inflation of 1921-29, when, under their auspices, the volume of cheque payments increased from 500 billion dollars to the staggering total of 1,111 billion—followed by an equally uncontrolled deflation, and culminating in crash."

Finally, the British stockbroker says that a fairly reliable pro-Government source has recently suggested that the American internal creditor will finally get somewhere, between 30 and 50 cents to the dollar in the estimate of revaluation.

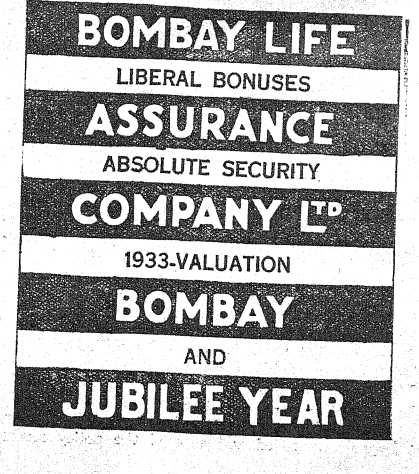
It is interesting to compare this view with that of M. Frederic Jenny, the Financial Editor of *Le Temps*. He thinks that a two-fold sentence has, in fact, been pronounced against the dollar the amputation of its internal purchasing power by 40 per cent., and its external depreciation by 50 per cent.

As for the Administration itself, it is optimistic about the present achievement, and the future possibilities of its policy of recovery. It should feel high satisfaction wih the confusion, created in the ranks of its opponents. Mr. Hesse Jones, Chairman of the R.F.C., is positive that the present monetary uncertainty is not hampering business, or interfering with the flow of bank credit. This view, made at the close of a tour of the country, is highly significant.

In an address to the National Association of Manufacturers, General Johnson also pointed to President Roosevelt as a man, who has saved the country from an unmeasured abyss of inflation, and asked every prudent man to support him, since he stood on sound ground.

Administration's Unimpaired Credit

Financial experts repeatedly say one thing, and have, as often, to unself it. But, they are not



Air Mail Week

wearied of being intrigued, again and again, by the dollar. When the buying price of gold was raised by 8 cents on December 1, the dollar, instead of following the hint, by depreciating, actually had the audacity to appreciate. But, the anticipation of the British buying for the token payment of December 15, tended to impart a firm tendency to the dollar. This apart, the fact of the gold price being nominally (except for domestic gold), and the exchange market being under control steadied the dollar vigorously. Exchange restrictions are applied with more firmness against selling spot or forward dollars, than against "swaps," by which spot dollars are sold against the purchase of forwards. The restrictions, however, do not apply to the sale of dollars in payment for goods and services. It may be argued that the transactions in swaps will narrow down the discount on forward dollars, in which case the speculative selling of dollars will, by making cost and risk less prohibitive, be encouraged. But, the psychological effect of the contraction of the discount on forward dollars is favourable, as it engenders trust. The consequent steadiness of the dollar has not a little to do with the success of the Administration's refinancing operations in regard to maturities, on December 15. But, this success has falsified the fond hopes of the Sound Money men, who calculated upon the Administration's discomfiture, thus compelling the issue of green-backs.

The Treasury statement, issued on December 2, showed that, althrough national debt increased in November to $23,534,000,000. The final deficit for the first five months of the fiscal year, after all ordinary and extraordinary expenditures, is $772 millions, compared with the deficit in the corresponding period of last year, of 1,151 million dollars. The strength of the Treasury position, therefore, lies in a reduction of the deficit, if not be annihilation of it.

The Treasury has issued $950 million dollars of 2¼ per cent. certificates of one-year maturity at par, to meet December 15 maturities. The new Treasury issue has been over-subscribed. A measure of confidence in the Administration's credit, has been afforded by the New York Life Insurance Company alone for 25 million dollars. The actual amount of the subscription totalled 2,714 million dollars, and the financial pandits are chagrined. They console themselves with the fond contemplation that the phenomenal success of the Treasury now financing issue affords merely another example of extraordinary Gullibility of the American investing public. Another instance of the perplexity, into which the monetary policy of President Roosevelt has thrown the financial prophets is the behaviour of the share market, which showed optimism on December 5, on the ground that inflation is apparently less imminent, while, for weeks past, inflation has been regarded as the chief reason for any advance. It is clear, therefore, that the Administration has full control over its policies, while it has baffled the Sound Money group, in making counter moves, in any successful manner.

In this connection, it is instructive to extract from the December issue of the *National City Bank of New York Review*: "The decline in American trade and industrial operations, which has been under way since July, showed signs of ending in November. Some of the accepted measures of business activity, including goods waggon loadings, electric power consumptions, steel operations and coal production have held their ground, or advanced. This is a heartening change after four months of steady recession, and it indicates that, in some case at least, the necessary adjustment of overstimulated industry to the growing rate of consumption is being completed. Experience bars the hope that new investment of private capital will contribute much towards increament in the present state of the American bond market, and that this is an important drawback. The offsetting fact is the evidence that public works expenditures are getting under way more rapidly. In other governmental measures also and in such purchases of capital goods as the industrial companies can finance themselves or with governmental aid the possibility of increases in purchasing power is seen. It appears from general review of business that the gold-buying policy of the Reconstruction Finance Corporation and monetary controversy, that has arisen have had little effect upon American trade and industrial activity. Despite the wide fluctuations in the market for investment capital and the foreign exchanges, there never was reason to think that the increased depreciation of the dollar, accomplished by the gold-buying policy, could effect the immediate rise in prices of domestic commodities, unless it stimulated speculative buying and the inertia of the markets indicates that business men have not wanted to buy ahead.

The new gold-buying operations of the Government have overshhadowed all other developments in the financial situation. The new policies have provoked a storm of controversy with repurcussions extending into practically all markets. Instituted for the purpose of raising commodity prices, the new departure from tested monetary practice represents an experiment in price-control, which is regarded with satisfaction by those who believe that prices can be controlled by monetary means, and with deep apprehension by others who deny that the present low prices are due to monetary causes and who believe efforts to raise them by monetary means will promote further uncertainty and confusion in business and result eventually in inflation. Reflecting controversy over the monetary programme, United State Government bond prices declined sharply during the month, but happily the market steadied after the selling rush, and prices rallied from the low points. Realisation that the decline had been too rapid, *plus* the announcement later that the Government intended to carry out the December financing in the usual way without resort to currency issues were factors in checking the decline and restoring confidence. The cause of all the business depressions is disordered in trade relations, which interrupts or slows down the normal flow of trade, and thus creates the surpluses which depress prices. To illustrate, there are right relations between wheat, maize, cotton, dairy produce, livestock, etc., and manufactured goods, transportation and taxes, which must be maintained in order to have prosperity. This just equation was disturbed in the seventies, and is disturbed now. Since there is a room to believe that credit resources and means of payment already are ample to sustain a price level as high as that of 1926, it follows that, if trade relations were adjusted, busi-

ness would readily revive and prices rise to that level without any change in the monetary system. On the other hand, if the policy of curtailing agricultural production is successful in restoring balanced relation, it follows that devaluation of money is unneeded, and if also resorted to, would carry the price level far beyond the 1926 level, which is named as the level required for just relations between prices and debts. This is the danger of inflation which arouses apprehensions. If provision is made for great additions on currency or bank credit without allowing for the resources now lying unused, return to a normal state of confidence, and business conditions will upset the calculations upon which action has been based."

It is obvious, therefore, that President Roosevelt's monetary policy is governed by a strong desire to avoid abysmal inflation. His main object is to frighten currency into active circulation through the purchase, by the public, of commodities. Evidences are not lacking that his policy has begun to register success, especially at the retail shops. The capitalist Press quotes its scriptures of misleading indices of department store sales, which show 71 in July, 70 in September, and 69 in October. But, the farmer and the mill-labourer, whose economic status is most improved of all groups are not department store customers. Then again, the figures for freight car loadings of 65 in July, 60 in September and 58 in October, have to be offset by the increased use of the motor lorry. Similarly, the reduced demand for capital goods is represented by the released capacity for the production of consumer's goods. In lines, which the Administration has declared to develop, such as construction contracts, factory employment and factory pay-rolls, the indices are gratifying. Even in residential construction contracts, the figures are stationary. It is only in the production of manufactures and minerals that the decline is not yet arrested. It may safely be assumed that, in the near future, greater progress, all round, is bound to occur, as the retail shops are denuded of their surpluses, and the export trade, which is already on the up-grade, develops further.

N. R. A. Re-adjustments

The Administration has gathered wind in its sails, and shows signs of moving at top speed. Mr. Rechberg, its legal adviser, has given his opinion that the Florida court's decision that N.R.A. codes are unconstitutional, can be ignored, as it has not the force of law, being based upon a minor point.

The National Emergency Council has now been formed by President Roosevelt, with a view to co-ordinate the various activities of N.R.A. The Council will consist of all the Secretaries, principally concerned with N.R.A., as well as General Johnson and Mr. Peck, the industrial and agricultural Administrators.

Within the Agricultural Adjustment Administration, control of foods and industrial-agricultural activities are separated from the initial processing of agricultural products. The latter activity is retained by A.A.A., and the former is transferred to N.R.A.

The National City Bank has decided to cut its capital from 124 million dollars to 77½ million dollars. The par value of the shares will be reduced from 20 dollars to 12.5 dollars. The write off will be used to take off losses, while leaving the old surplus of 40 million dollars untouched.. Mr. Perkins, its Chairman, addressed a letter to his clients, in which he says:

"In the eight months since I last wrote you," he says, "we have proceeded on these lines. Expenses, including officers' salaries, have been and are being cut, and methods of operation simplified, with resulting economies and increased efficiency.

"Our directors feel that the bank should support the President of the United States in his programme of strengthening the capital structure of the banks of the country and in his campaign to bring about business and industrial recovery."

Mr. Hesse Jones, the Chairman of the R.F.C., has published the names of eleven other banks, which will participate in a joint issue of $43 million debenture notes to increase their capital assets. This is regarded as a great success for the Roosevelt deposit guarantees scheme. The financial community, however, fears that the R.F.C., purchases of bank stocks are paving the way for the entrance of the Government into banking. But the R.F.C. has put its finger still further into banking business by agreeing to purchase $22,900,000 of the preferred stock of the Northwest Bank Corporation group.

Steel production, motor trade, and retail demand are heading towards recovery.

RAILWAY LEGISLATION IN OTHER COUNTRIES

(Communicated by Prof. L. A. Natesan).

The present economic depression with its reactions on the railway income combined with the effects of competition from new types of carriers, especially, the road motor transport has compelled scrutiny in most countries into the transportation problems generally. This enquiry has been more seriously undertaken in Canada and the United States.. In view of the impending constitutional changes as regards the future of the Indian Railways and proposed attempt to control competing carriers, a review of recent legislation in these two countries is of considerable interest, particularly because of the analogous transport conditions.

1. CANADA.

The recent and important piece of legislation undertaken in Canada is 'An Act respecting the Canadian National Railways and to provide for co-operation with the Canadian Pacific Railway System, and for other purposes,' which has become law on May 23rd, 1933. The origins of this Act are to be found in the recommendations of the *Report of the Royal Commission to enquire into the Railways and Transportation in Canada 1931-32*. The Commission was called into being on account of the difficult financial situation created by successive deficits on the Canadian Railways and the consequent burden on the Dominion Treasury. The Dominion Parliament after an exhaustive discussion passed the Act mentioned above, cited for brevity as *The Canadian National—Canadian Pacific Act, 1933*.

The Act consists of 28 sections, divided into four parts. In Part 1 is elaborated the new machinery to be created under the Act to control the Canadian National Railways. The main features of the new organisation follow in some respects the recommendations of the Drayton-Acworth Report in 1917.

The Governor in Council is given power to appoint in place of the existing Directory three Trustees, one of whom is to be the Chairman, devoting his whole time to his duties. He shall not be an Officer nor after his appointment as Trustee become otherwise than by re-election a Director of any Company other than a company which is comprised in National Railways. "The other two Trustees are to be whole-time or not as determined by the Governor in Council. The Trustees are to be paid a salary fixed by the Governor-in-Council, and if any Trustee is in receipt of a pension from any railway company he shall not be entitled to receive or to be paid such pension during his term of office." Further, "each Trustee shall be paid but one salary, and saving and excepting that his right to prepayment of his proper expenditures made while engaged in and upon the affairs of National Railways, he shall not be entitled upon any ground to any recompenses or emolument." The Chairman is to be appointed for a period of five years from appointment while each of the other original Trustees for less than this period and for different durations from that of his co-trustee. Casual vacancies among them "shall only be filled in for unexpired portion of the vacating Trustee's term and vacancies due to efflux of time for full period of five years. The Trustees shall, and may thereafter, subject to the provisions of the Act, have and exercise all the powers rights and privileges and immunities and perform and be subject to all the duties, responsibilities and restrictions which now appertain to the Board of Directors of the National Company. No orders, regulations, by-law, Act, decision or proceedings of the Trustees shall require the approval of the shareholders of any company to which the section applies. The Trustees shall appoint on terms to be fixed by them and with the titular rank of President a person other than one of themselves to execute and perform under and in consultation with them the powers, authorities and duties of Chief Operating Officer of National Railways."

It is significant to note that the President shall report and be responsible to the Trustees and to them alone.

The annual budget of the National Railways will be under the control of the Trustees. Estimates of the amounts required for income deficits or for interests on obligations outstanding in the hands of the public for capital expenditures and for refunding or retirement of maturing securities are to be submitted by the Trustees to the Minister of Finance for consideration and approval or disapproval in whole or in part of the Governor-in-Council and thereafter presented to Parliament. Income deficits shall not be funded. Amounts provided by Parliament to meet capital expenditures shall not be divested to cover deficits in operation unless with the express authority of Parliament.

As regards Audit, the Act provides for an independent auditor appointed annually by a resolution of Parliament and annually reporting to Parliament in respect of their audit. The Auditors are to call attention in their report to any matters which in their opinion require consideration or remedial action.

The Trustees are required to report annually to Parliament in a summary manner the results of the operation, and co-operative measures plans, or arrangements effected pursuant to the Act, any economies or more remunerative operation thereby produced, the amount of capital expenditure and such other information deemed to be of public interest or necessary for the information of Parliament.

Part II of the Act deals with measures, plans or arrangements for co-operation between the National and the Pacific Railways, a frank recognition, probably for the first time by legislation, of the need for the elimination of needless competition between rival carriers. Part III of the Act provides for arbitration by the constitution of Tribunals to settle disputes between the two systems as regards such questions as joint use of terminals, running rights and joint use of tracks, construction of new lines, duplicate facilities, posting of freight or passenger traffic etc.

2. UNITED STATES.

The problem of the United States is analogous to that of Canada as regards excess of transportation facilities. The United States, possessing 2/5ths of the world's total railway mileage, experiences an embarrassing problem with the emergence of motor transport and the multiplicity and conflict of State and Federal jurisdictions. The procedure followed is characteristic of American methods. It is best explained by summarising the Act passed in June last for a period of one year for the present, "to relieve the existing national emergency in relation to Inter-State rail-road transportation, and to amend Sections 5, 15a, and 19a, of the Interstate Commerce Act." The main purposes of the Act are "to encourage and promote or require action on the part of the carriers and of subsidiaries to avoid unnecessary duplication of services and facilities of whatsoever nature and permit the joint use of terminals and trackage incident thereto, and preventable expenses, (2) to promote financial reorganisation of the carriers so as to reduce fixed charge to the extent required by the public interest and improvement of carrier credit and (3) to provide for the immediate study of other means of improving conditions surrounding transportation in all its form and the preparation of plans therefor."

Section 2 provides for the appointment of a Federal Co-ordinator "in order to foster and perfect Interstate Commerce in relation to railroad transportation by preventing and relieving obstructions

and burdens thereon resulting from the present acute economic emergency and in order to safeguard and maintain an adequate national system of transportation." Section 3 of the Act directs the Co-ordinator to divide the lines of carriers into three groups, an eastern, a southern and a western group. Three corresponding regional co-ordinating committees are to be constituted of five regular members elected by the railways concerned and two special members to be approved by the Co-ordinator. The Committees are asked to take voluntary action on their own initiative as regards the first object above referred to.. When regal or other difficulties hinder the carrying out of any such changes and if the Committee desire them, or if the Committe do not take action on a matter suggested by the Co-ordinator, the Co-ordinator is authorized by the Act and directed to issue and enforce such orders if he finds them in public interest and in furtherance of the objects of the Act.

Special provisions are made to protect the interests of labour by the constitution of a labour committee which is entitled to notice of any changes affecting them and by the definite clause in Section 7, that "the number of employees in the service of a carrier shall not be reduced by reason of any action taken pursuant to the Act below the number as shown by the pay rolls of employees in service during the months of May 1933," making proper deduction upto 5 per cent. for normal retirements or loss; "nor shall any employee be deprived of employment such as he had during the said month of May nor be he in a worse position with respect to his compensation for such employment," by reason of any action taken under the authority conferred by the Act. Any disputes arising on this account are to be settled by regional boards of adjustment representing the employers and employees.

Section 13 of the Act authorizes and directs the Co-ordinator "forthwith to investigate and consider means of improving transportation conditions throughout the country, including cost finding in rail transportation and the ability, financial or otherwise, of the carriers to improve their properties and furnish service and charge rates which will promote the commerce and industry of the country and including, also the stability of railroad labour employment and other improvement of railroad labour conditions and relations." He is also charged with submitting such recommendations calling for further legislation to these ends as he may deem necessary or desirable in the public interest.

ACCIDENT AND GENERAL INSURANCE IN U. K. IN 1932

Like fire insurance business in U. K., Accident and General insurance business also has after a steady growth year after year reached its zenith in the year 1929 when the total premiums received by all the companies amounted to £66½ millions. Like fire insurance business, this has also been declining since then. In 1930 the total premiums received declined to £66.4 millions and then to £63.7 millions in 1931 and the year under review revealing a further decline of more than £2 millions. During the year 1932 the total premiums received amounted to £61½ millions, the claims paid amounted to £36½ millions or 59 per cent. of the premiums, commission and management expenses amounted to £24.7 millions or 41 per cent. of the premiums, and underwriting profits amounted to £1.1 millions or 1.7 per cent. of the premiums. It can be seen from the accompanying tabular statement that the claims paid represent a very high percentage of the premiums, perhaps due to the increasing road accidents in U. K. year after year. The underwriting profits, though not the lowest during the past 10 years, shows a heavy decline compared to the previous years. It may be mentioned here that in Accident business as in the case of fire business, the actual surplus between the income and the outgo was nothing in the year 1932, and the trading profits disclosed were only after adjustment of the previous year's unexpired reserves and the current year's unexpired reserves.

It was expected that the passing of the Road Traffic Act, with its provision for compulsory insurance against third party risks, would expand the Accident insurance business and restore it to the previous high levels. But the actual results do not reveal any sign of improvements as the additional income from this source was not material enough. The Tariff offices whose premiums accounted for £48.3 millions in 1932 experienced a debit balance of £123,511 and their underwriting profits came to £677,417 only after adjustment of the unexpired offices. The non-tariff offices whose total premiums for the year amounted to £13.2 millions had an actual profit of £379,028. The trading profits disclosed in total is so meagre that the shareholders can get very little, if at all any, return. The present position clearly shows that the policyholders get their cover at the cheapest rates as it is proved in this year that they have got their cover a little above actual cost price. The claims ratio is much higher than in fire business and the reserves of individual companies are not so high as in fire business. For Accident business has no conflagration hazard; only it has to deal with a number of small claims.

Out of the total premiums of £61½ millions, motor insurance being the chief item accounted for £31.3 millions, and the profits from this section amounted to £913,205. As in fire insurance the heavy decline in this branch of insurance is partly due to the fall of miscellaneous insurance business outside united kingdom particularly in U. S. A. We give below two tabular statements showing the combined results of Accident and General insurance business in U. K. during the past 10 years, and the results of leading individual offices for the year 1932.

Accident and General Insurance Business during last Ten years.

CALCUTTA STOCK MARKETS IN 1933

MR. KHANDELWAL'S ANNUAL REVIEW

BUSINESS PROSPECTS

Presiding at the Eleventh Ordinary General Meeting of the Calcutta Stock Exchange Association, Ltd., Mr. Kedarnath Khandelwal, B.A., LL.B., said:—

It has been a long accepted rule of this Association that at the Annual Meeting your President should attempt to take stock of the business situation and to indicate the broad trends of business in the coming year, in so far as it may be possible to foresee them. The former is obviously the easier task, even as the latter is the more fascinating, if only for its hazards. But bearing in mind that, apart from the difficulties of attempting to foresee the future, I am not personally quite competent to judge, even objectively, the facts of the economic world as they are to-day, I should be content to indicate the main lines of the developments of the past year and to clarify the relation which they bear to the long course of the misfortunes of world economy which we generally describe as the economic depression. I may say at the outset and you, gentlemen, will be able to bear me out, that at the end of 1933 there is, among businessmen all over the world, a more pronounced optimism than at any time during the last three or four years. This mood of optimism, even when it is unreasonable, has its definite place in any revival of trade and industry. But on this occasion, it has a somewhat unique significance in as much as the business world has been hard hit during the last three years that up till recently it did not even dare to hope for a better turn of affairs.

This time last year we heaved a sigh of relief that the pessimist like the optimist was proved to be in the wrong and that far from sinking further into ruin, financially speaking at least, the world had, though not perhaps by design, succeeded in arresting the rot. Every crisis, it must be remembered, has within it the germs of its solution. The breakdown of international finance in 1931 to the complete extent to which it happened meant, on the one hand, that countries who are not to remain on the gold standard, had no compunction in abandoning it and securing the advantages of the depreciation of currency which such abandonment entailed. On the other, the debtor nations, who on account of the shrinkage in world trade and fall in prices, were unable to discharge the foreign obligations which they lawfully incurred could and did successfully plead that it was humanly impossible to discharge their commitments. Thus out of the crisis came two specific measures of relief, one the devaluation of currencies and the other the declaration of moratorium with or without the consent of the debtors. 1933 might well be characterised as the period in which the relief that could be secured from these two measures were fully realised. And it is a matter for gratification that in spite of the disappointment in other spheres, the measure of improvement that has resulted from these two factors has been sufficient to kindle the hope which had by the end of 1932 altogether flickered out.

So far as the Stock Exchange is concerned, no aspect of the present recovery is of greater importance than the vast improvement which has come over during the year over the credit of the Goverment of India and the state of the giltedge market. It will be remembered that the first steps towards this improvement were taken in 1932 when as a result of the expansionary policy followed by Great Britain the securities of the British Government experienced a boom. The Indian securities participated in the rise and the rupee securities then followed with the result that by the beginning of 1933 the Government of India were in a position to take the fullest advantage of the improvement that had come over the government securities market.

The borrowing rate of the Government was brought down from 5 per cent. to the prewar rates of 3½ per cent., which is an achievement of which any nation could well be proud. In order to understand properly the magnitude of the success attained by the Government in its loan operations, it is relevant to go back to September, 1931 and to take a note as to how step by step reductions have been brought about in the borrowing rate of the state.

In September, 1931, a 6½ per cent. short dated loan was the only course open to the authorities; not only that but the list had to be kept open for a indefinite period. Special facilities had to be offered; and despite all this, the realisations were only 16.95 crores. So great a change has come over the giltedge situation and the psychology of the investors that the 4 per cent., ten year loan for Rs. 15 crores issued in January, 1933 was over subscribed within a few minutes, the treasury bills receiving allotment and all cash applications being curtly rejected.

Beginning from June, 1932, Government has been reducing its borrowing rate at the time of the issue of each successive loan; and this had a very healthy effect on the prices of the existing securities and helped a good deal to restore confidence in the Giltedge Market.

Inclusive of the loan issued in June, 1932 and ending with the issue of 3½ per cent. New Loan 1947-50 Government came into the Market on 5 different occasions. (1) In June, 1932 it was a 5½% 1938-40 loan at Rs. 98. (2) In August, 1932 it was a 5 per cent. 1940-43 at Rs. 98. (3) In January, 1933 it was a 4 per cent. loan 1943 at Rs. 98. (4) In February, 1933 it was 4 per cent. 1960-70 on a basis which worked out to Rs. 93 and on 25th April, 1933 a 3½ per cent. 1947-50 at Rs. 96.

A feature, on which one should feel particularly gratified is that in the case of the loans issued in January and February, the yields on the loans were decidedly lower than those forthcoming on the existing securities on the eve of the loans, with the result that the immediate effect of the announcement of the loan was to cause an upward rise in the prices of securities so that they could adjust themselves to the new borrowing rate.

Government was relieved a good deal of its credit-restricting operations and anxieties about sterling remittance owing to export of gold which amounts to the colossal figure of Rs. 1,50,44,61,230, since England went off the gold standard. Conflicting opinions have been expressed about this outflow of gold from India; but so far as the finances

of the Government are concerned they have been an unmixed blessing.

Looking back to 1931 we find that repeated contractions of currency, sales of treasury bills in season and out of season at exorbitant rates of interest, not because there was any big trade demand forced increase of Imperial Bank rate of interest not because there was any big trade demand but as a prop to a drooping exchange were the order of the day.

As a refreshing contrast to that we find in 1933 a boom of considerable magnitude and wide repurcussions in the Giltedge Market.

For the first time since 1926 the issue of a New Rupee loan announced in January, 1933 was followed by an activity in Giltedge Market which put up the price of 3½ per cent. G. P. Notes, which rose from 76½ in the early business hours of the day to 79/14.

The reason for this strength in the giltedge market is not far to seek.

So far as India is concerned, it can be asserted that confidence has to a certain extent been restored, in business circles.

Politically, 1933 may be said to be a year of relative tranquility. Money was easy and bank-rate was low. Bank rate which was standing at 8 per cent. up to 13th January, 1932 was brought down to 3½ per cent. on 16th February, 1933 and since then it is standing at this figure till to-day.

Interest on fixed deposits was lowered by banks, call money was ½ per cent. and sometimes money even at these low rates was unlendable, so much so that if one were to search like Diogenes with a lantern in one's hand in broad daylight, one would find it difficult to find borrowers.

Owing to low prices of commodities, all round demand of funds for trade account was negligible and often there was a glut of money lacking outlets for investment.

Investment in equity shares was not free from risk and loss of confidence engendered by a falling market covering the period from 1929 to 1933 prevented investors from looking up their capital in ordinary shares of industrial concerns.

A study of he Treasury Bill rates also discloses the reason why so ample support was forthcoming to the giltedge market. Borrowing rates for Treasury Bills which were standing at 6/12 for 6 months and 7/3/11 for 3 months for the week ending 6th January, 1932 were brought down to 2/10/5 for the week ending 9th January, 1933 and ultimately week after week rates were lowered till they touched /12/11 per annum for the week ending 28th August, 1933. Since then there has been a raising of the discount rates partly because they had been cut too fine and partly because the third and fourth quarter of the financial year are not periods of revenue surplus and Government required money for paying off the heavy maturities of Treasury Bills.

Looking to Government's finances, it appeared there was no need for a cash loan for another 2 years. There could be no immediate expansion in the capital programme. Capital outlay on Railways could not exceed the excess of payments into Railway Depreciation Fund over the withdrawals. If the giltedge market is assured that the future rupee loan plans of the Government will be few and far between and that too only for conversion purposes on terms and conditions necessarily more favourable to the Treasury investors ought to be able to realise clearly that when the demand on the capital market is reduced to a minimum, the borrowing rate of the Government must come down resulting in existing securities recording substantial rise in prices. There were two sterling loans floated in London the first one being in May, 1933. 4 per cent. at £97¼ (1948-53) for £12 million and the second in October, 1933 3½ per cent. of 1954-59 for £10 million. I am sorry to say that the Treasury has not learnt from the Indian experience and it does not appear to have been put to any beneficial use. At a time when 3½ per cent. loan at 96 should have been sufficient the India Office issued a 4 per cent. Sterling loan at 97½. The 7 per cent. sterling loan issued in 1921 was a perfect scandal. The 6 per cent. loan issued in 1930 on a yield basis which worked out to 6¾ per cent. was offered at a time when in the view of so leading an authority as *Economist* 5¾ per cent. should have sufficed. Apart from the question of giving any undue benefit to the British investors and apart from the question of Indian investors being unduly penalised, the question that arises in the mind of the investing public is whether the Secretary of State was justified in floating a loan at 4 per cent. at 97½ in London so soon after the 3½ per cent. new loan 1947-50 at 96 was so successfully floated in India. The result of issuing a loan at higher yield basis brought about a landslide in 3½ per cent. which collapsed from 89-12 to 79-12 within a month's time. In the issue of new loans the Government should always follow a correct and scientific credit policy which may foster the confidence of the investors.

FIXED INTEREST BEARING SECURITIES

The rise in security prices has been reflected in the rise in prices of jute mill preference shares and preference shares of other good concerns, railway shares and debentures of Industrial concerns. 8 per cent. preference shares rose to 140, 7 per cent. to 133 and all good preference shares that were offered were readily snapped.

Another saving to the industrial concerns has been to pay back the debentures which were floated at a higher rate of interest and if necessary to float new ones at a much lower rate of interest.

JUTE SECTION.

Business was very limited in this section during the year under review.

Early in March, a Banking crisis took place in United States which rapidly assumed such immese proportions as to threaten a Currency collapse. As a result of emergency legislation and strong administrative action, necessitating among other measures the closing of Banks and Stock Exchanges, drastic exchange restrictions and an embargo on the export of Gold, confidence was to a large extent restored, and from April onwards there was a sudden revival of Hessian prices which moved up to about 11-9 and this had a healthy effect on the ordinary Shares of various Jute Mills. Sussequently as the first affects of inflation were neutralised in America and Commodity prices began to come down there, a downward movement set in here also. Hessians touched the low level of 8-8 and Jute 24-8. Howrah and Kamarhattys re-acted and moved back to 475 and 47/- respectively, in the last week of November, 1933.

The prices of the various Jute Shares given below will give an indication of the price movement that took place in this section during the course of the year.

	3rd Jan. 1933	30th Juae 1933	30th Nov. 1933
Kamarhatty ..	360 0	492 0	486 0
Howrahs ...	36 11	51 11	47 9
Anglo India ...	244 0	374 0	321 0
Bally ...	105 0	150 0	124 0
Alliance ...	215 0	327 0	225 0
Clive ...	20 6	27 12	24 4
National ...	17 9	23 8	20 10

The Mills continued to work during 1933, 40 hours a week and 15% of the Looms were closed. Since the stock figures have come down considerably, proposal was put forward to reconsider the question of the closing of the Mills and to open 5% of

the Looms. The Jute Mill Association had called a meeting to reconsider the whole question but it has been postponed pending the effect of the duty of 2-9 cts. by America. The stock figures are as under, including the returns of Adamjee, Agarpara and Gagalbhai Mills which will show that stocks have gone down considerably since 1932.

	31st Dec. 1932	30th June 1933	30th Nov. 1933
Hessian Cloth & Bags ...	83,216,314	72,521,568	57,611,775
Sacking Cloth & Bags ...	71,454,591	169,430,914	96,216,800

Imports of jute in Calcutta for the Season up to 25th November, 1933 have amounted to 48 lacks of bales out of which 30 lacks of bales have been taken up by the Mills in Calcutta and 18 lacks of bales exported out of Calcutta. I am glad to tell you that there has been an improvement in the export figures of Jute Cloth as will be seen from the following figures, although Jute Bags show a shrinkage as compared with the figures for the previous year.

Export of Jute Goods.

	Sacking	Hessian
Jute Bags—		
from 1st January to 25th November, 1933 ...	289,221%	83,942%
Corresponding period of 1932	301,567%	85,356%
Increase or Decrease ...	−12,346%	−1,414%
Jute Cloth—		
from 1st January to 25th November, 1933 ...	31,709%	947,672%
Corresponding period of 1932	21,381%	882,945%
Increase or Decrease ...	+10,328%	+64,727%

Jute has been selling at a very low level of prices and poor ryots have been hard hit.

In spite of a propaganda by our Government for a short crop in jute, the attempts so far have not been very successful and this year's crop is expected to be about 80 lacs of bales. The arrival of jute this year from up-country has been heavier than for the corresponding period in the previous year and this is largely responsible for keeping down prices. The poor ryots have been so hard hit by continued depression and low prices of jute that they have lost all power to withhold the marketing of their crop even at these low levels. There has been a regular war between members of East India Jute Association and Jute Balers Association, one accusing the other of depressing jute prices and out of this controversy this fact is certain that some steps are overdue to help the poor ryots and to put up the price of jute to remunerative levels. I believe that the establishment of Economic Enquiry Committee by the Bengal Government has been a bold step forward by Sir John Anderson and a move in the right direction. It is absolutely necessary that some means should be devised to bring relief to the starving millions of Bengal who are in Jute Cultivation. During the whole of this period Hessians improved in the month of May, but in later months prices could not be maintained.

Price of Jute manufactures on New York	Jan. 3 1932	May 31 1933	June 30 1933	Nov. 30 1933
Price of 9 Porters :	8 1	11 5	11 9	9 0
Price of 11 Porters :	10 9	15 2	14 4	11 3
9 Porters	3.20	4.70	4.95	4.95
11 Porters	4.20	6.15	6.15	6.10
Cross Rate	.33 15/16	4.00	4.38½	5.17½
Jute First	26 0	35 8	29 12	24 8
Lightning	24 0	34 0	28 4	21 8
Howrahs	36 11	53 11	51 0	47 13
Kamarhatty	365 0	515 0	486 0	489 0

On the 2nd of December reports were received in Calcutta of N. America levying a compensatory processing tax of 2.9 cents a pound on Jute Fabric and Jute Yarn and varying tax rates on paper products competing with similar Cotton products, by the Farm Administration. The effect of the tax on the export of hessians is anxiously awaited by those interested in the trade. Much of late has been made out about the Japanese competition in Jute industry in the consuming Markets. The menace is not so serious as it is made out in papers. Investors need not feel so nervous about this.

COAL.

This section was very disappointing during the first 10 months of the year. Coal shares were practically unsaleable and new low levels were created.

	3rd Jan. 1933	30th June 1933	30th Nov. 1933
Burrakurs ...	9½	10⅜	15½
Equitable ...	14½	16⅜	21⅝
Bengal Coal ...	212½	202½	250
Raneeganj ...	27⅛	29¼	43½
Pench Valley ...	26⅜	31	37½

As the year was drawing to a close owing to a restriction scheme being put up before the Government jointly by all European and Indian Colliery Merchants, a revival of interest took place. It is perfectly clear that unless some definite and unanimous scheme of restriction is placed before the legislature the unfortunate coal industry must remain under a cloud. I am glad to say that at long last the unanimous scheme has been forwarded to the government and as soon as it receives sanction by the government coal industry will reap the benefit of restriction and prices will improve.

COTTON.

This section was dull and lifeless. Prices of all Cotton Mill Shares were low and interest was on the wane. The only event of importance was the agreement entered into by Mr. Mody with the representatives from Lancashire for reduction of 5% duty on British goods. The Indo-Japanese talks are still going on with chances of final settlement as remote as ever. Very dull conditions prevailed in the Cotton Market, the cause of weekness being the depreciating dollar which places American Cotton in a very favourable position for buyers abroad. The boycott of Indian Cotton by Japan is another factor which is adversely affecting the Market.

What the Japanese boycott has meant to Indian Cotton will be abundantly clear from following figures :—

	Season 1933	Season 1932
Exports of Indian Cotton to to Japan	7,12,000	4,80,000
Exports of American Cotton Japan in Bales	321	1,38,446

Although exports to Great Britain, the Continent and China have increased, the boycott by Japan has led to a total shrinkage in exports to 194 thousand bales.

MISCELLANEOUS.

Paper Shares were steady and well supported—although the profits are likely to be reduced owing to Japanese competition still investors are disinclined to reduce prices.

Sugar Shares are lower as compared with top prices touched. The increase in the number of Sugar Mills is mainly responsible for this.

The production of sugar in British India has gone up since 1930-31 as the following figures will disclose :—

	1930-31 Tons	1931-32 Tons	1932-33 Tons
Production ...	32,18,0000	39,70,000	46,51,000

Another element of uncertainty is the question of abolition of surcharge at the time of the next

Budget, which is disturbing the minds of the investors: This is the reason that there has been a set-back in the prices of sugar shares at the close of the year.

In the Engineering Group, Indian Iron and Steels are fairly steady at low levels. Burn & Co. after improving to 160/- receded to 145/-. Indian Standard Wagons after touching 50/- receded to 45/-. Owing to establishment of many new sugar mills, Arthur Butler improved to about Rs. 6/-, but again receded to 4-8, improving at the end of the year to 5/12/- again.

Burma Corporations touched 9-4 on proposals of rehabilitation of silver by America for monetary purposes, but have dropped to 8-12.

Bengal Chemicals improved to 305/- although the usual dividend of Rs. 15 per share was maintained, but receded later to 260/-.

Indian Wood Products touched 33/- but at the close they were on offer at Rs. 29.

Flour Shares were neglected and with prices of wheat at low levels they had a difficult year. Bengal Flours dropped to Rs. 101/- while Hooghly Flours and United Flours came back to round about Rs. 12/-.

Shipping companies also improved in prices as there was some movement in merchandise; Calcutta Landing and Shipping touching Rs. 8/-.

Gentlemen, I have within the limits of my time and capacity tried to probe into the outstanding facts of the business situation and the fortunes of the various sections in which the Stock Exchange trades. And we have reason, to feel grateful that 1933 has in many respects showed a distinct improvement over 1932 and that, in spite of the disappointments that have occurred at various stages of the year, our experiences have, on the whole, been such as to enable us to look upon the future with hope, instead of the blank despair of a year ago. While feeling grateful for the change, it is necessary, as much from the standpoint of business prudence as from the standpoint of the scientific spirit, that we should not exaggerate the extent of the improvement or under-rate the dangers with which business life would still seem to be beset. Though, indeed, there has been a very considerable improvement in world trade, we cannot forget that the principal causes of its dislocation still continue in the same measure and that, if anything, 1933 has seen the accentuation of the chaos of international currencies and exchanges and that there is less effort made to-day to bring about a stabilisation of currencies than even during the last four years that had gone before.

The great experiments of Mr. Roosevelt in stimulating recovery are still in an indecisive state, and it may be supposed that, so long as Mr. Roosevelt feels that the results are not conclusive either way, he would be unwilling to conclude any agreement with France or Great Britain on the question of the stabilisation of the exchanges. It might well be that for the greater part of 1934, as for the greater part of 1933, our eyes will have to be fixed on America watching the vicissitudes of Mr. Roosevelt's recovery plan. And in making our programmes we shall have to bear in mind, on the one hand, the vast potentiality for constructive work, once Mr. Roosevelt proves the wisdom of his policy and, on the other hand the immense dangers to which world trade will be exposed, if the recovery programme, should, for any reason, collapse. There is, however, a midway between the two, by which I mean that, if the results of the programme are in-decisive, in the sense that neither Mr. Roosevelt need abandon it in America nor other nations imitate his example in their own countries, Mr. Roosevelt might still be persuaded of the advantage to American and world economy of coming to an agreemuet with the nations of the world in regard to the stabilisation of the international exchanges. If and when that comes about, one of the major uncertainties standing in the way of the further progress of the recovery will have been removed; and each nation would have been assured of the conditions in which it could work its own economic policy. But till the signs of these favourable developments are noticeable in the horizon, our attitude has to be, shall I say, one of cautious hopefulness, rather than hopeful caution for I still say the emphasis to-day must lie on hopefuless more than caution. Before I close, gentlemen, I would like to say a few words about the internal affairs of the Stock Exchange.

INDIA EQUITABLE INSURANCE CO., LTD.

IS THE RUPEE OVERVALUED ?

EIGHTEENPENCERS ANSWERED

By Nalini Ranjan Sarkar

Acharya Ray tries to reconcile his present support of 18d. rupee with his staunch advocacy of 16d. rupee in 1927 and says that what he wanted was "16d. gold rupee and she present 16d. sterling rupee is an altogether different thing to-day.' The only deduction from this is that he still adheres to 16d. gold rupee. If that be so, may I put before him that 16d. gold rupee would be approximately 22d. sterling rupee to-day? In other words, he would have to be a terrible overvaluationist. Even the Government of India would shudder to fly the rupee so high. Acharya Ray's attempt to reconcile his old economics with his new has, I am afraid, tied him up in a curious economic knot.

Is the Rupee overvalued?

I may now turn to the main proposition which has been questioned in certain quarters "Is the Rupee over-valued?" In this connection it may be pointed out that for the last 14 years the Government have been following a consistent and relentless policy of maintaining an over-valued rupee. Soon after the war the Government fixed the rupee at 2s. It broke down after our gold resources had all but decimated, and the rupee sagged below 16d. After the War many European countries such as France, Italy, Germany and Belgium devaluated their currencies before they returned to gold. England, however, returned to gold in 1925 at the pre-war parity. But India was manoevoured into returning to gold ratio higher than the pre-war parity.

Thus the rupee was over-valued even initially when the present ratio was given statutory recognition and the over-valuation has continued ever since. Then there is the catastrophic decline in the favourable balance of India's foreign trade in merchandise since 1928-29 and, what is more, a proportionately heavier decline in the exports of India *vis-a-vis* the fall in the exports of the respective countries, and the dwindling percentage share of India in the total world trade.

It may now be pointed out in corroboration of this statement that even within India, the incidence of the over-valuation of the rupee is registered in very much the same way in a larger percentage decline in the value of the exports as compared with the import trade of the country:—

Percentage change in the Exports and Imports of India as compared with the previous year

	Import.	Export.
1931-32	−24%	−29.3%
1932-33	1.5%	−17%

This disparity between the decline in exports and imports gives point to the presumption that the rupee is over-valued. It need hardly be pointed out that an over-valued currency acts on the one hand as a bounty to imports and on the other as a handicap on exports. The implications of this first postulate of currency principles are amply borne out by the trends of our foreign trade during the last two years.

Comparative price Statistics

Another unmistakable testimony of the over-valuation of the rupee is furnished by the comparative price statistics of India and other agricultural countries which are susceptible to the same economic forces as India. Such a comparison of price movements reveals that although as a consequence of the depression in world trade there has been a fall in prices in all these countries, the decline has been conspicuously greater in the case of India than in other agricultural countries.

Index Number of Wholesale Prices

	1930 (Average)	1933 (May)	Percentage fall as compared with 1930
Australia ...	147	129	10.8%
Canada ...	135	105	22.2%
Argentine ...	122	112	8.2%
New Zealand ...	143	130	16.0%
India ...	116	87	25.0%

To what else could the unique fall in prices in India be ascribed than to the over-valuation of the rupee?

Improved Trade Balance after 1927

The question has been asked as to now, if the rupee was over-valued, the export of India could have increased in the years following 1926-27.

The following table shows that though during 1928 there has been an all round increase in the exports of all agricultural countries the increase has been the smallest in India excepting Australia; it also shows how with the advent of depression in 1929 the fall has been more precipitate in India than in most of these countries. By all tokens the unique effect in the case of India in both instances is to be ascribed to the over-valuation of the rupee.

Exports of Merchandise

Percentage of Increase & Decrease

	1928	1929
Canada ...	15	−15.4
Australia ...	−10	13 (Year of Official suspension of gold standard)
Newzealand ...	14.6	0
Brazil ...	9.0	−2.1
Argentine ...	5.8	6
Denmark ...	5.4	4.3
	(1928-29)	(1929-30)
India ...	2-6	−5.9

Recent Expansion of Exports

The fact that rupee is over-valued is indirectly proved by the arguments advanced in refutation of the contention by the advocates of the 1s. 6d. ratio. It is asserted by the latter that an adjustment in the value of the rupee to trade conditions must have taken place as otherwise the trade balance of India could not have gone up so high as Rs. 11 crores during the six months April to September in the current year. While it should be pointed out that the increase in exports during the period under review has by no means been exceptional in the case of India, as in fact it has been brought about by a general improvement in the conditions of the world trade being reflected in the stimulation of the trade of all countries, the increase in the case of India is to be ascribed partially at least to certain special circumstances. Taking 1928 as the base year equivalent to 100, the index of the industrial activity for the whole world (excluding U. S. S. R.) marked an increase of more than 30.8% within five months, rising from 65.8% in July 1933, the percentage of increase being the highest in U. S. A., Japan and the U. K. A close scrutiny of the movements of India's foreign trade that hace yielded the satisfactory balance shows that instead of challenging the fact of over-valuation these indirectly confirm it. Such a scrutiny reveals that out of the excess of India's exports during this period worth about Rs. 10 crores as much as Rs. 9 crores are accounted for by only 7 countries, as shown below:—

Japan	2,12 lakhs
U. K.	2,34 ,,
U. S. A.	2,23 ,,
Germany	84 ,,
France	30 ,,
Italy	74 ,,
Belgium	37 ,,
Total ...	8,94 lakhs

SECURITY OF INCREASED VOLUME OF TRADE

Among these countries, the larger off-take of U. K. is to be partially ascribed to the dubious effect of the Ottawa Agreement and the increased industrial activity in England, but it is significant that her relative share of the exports from India during the six months April to September has been even smaller than it was in 1932. The increase in the case of Japan and the U. S. A. is explained by the remarkable acceleration of the industrial activities of the two countries under the direct incentive of a depreciated currency in the case of Japan leading to a phenomenal expansion of exports and the 'reconstruction scheme' in the U. S. A., creating increased demand for raw materials.

Topical Extracts :

For the rest of the countries it is significant to note that the increase of India exports to these countries compared with the corresponding period of 1932 was primarily ascribable to the relative overvaluation of the currencies of these countries as compared with the position in 1932. This will be evident from the following table:

Rates of Exchange in 1932 and 1933 compared

Geamany Mark to £ per—20·43

1932			1933		
April	7	15·95	April	6	14·43

Aug.	18 ...	25'0	Aug.	24 ...	23.48
Sept.	22 ...	24 85	Sept.	21 ...	22.15

The fact that the currencies of Germany, France, Italy and Belgium were all relatively over-valued in relation to £ and consequently the rupee, during the 6 months April to September of this year as compared with the corresponding period of 1932, is the real explanation of the remarkable increase in India's exports to these countries. As a matter of fact, it is this relative over-valuation of the currencies of the aforementioned countries that led to an increase of their percentage share in the total exports of India during the period under review and a corresponding fall in the percentage share of India's imports therefrom in accordance with the basic economic law that an over-valued currency stimulates imports and discourages exports :

In other words as against these countries India enjoyed the advantage of devaluation and the trade figures are the most eloquent justification of the demand for devaluation.

(Six months—April to September)

	Imports from India.		Exports to India.	
	Imports from India.		Exports to India.	
	1932	1933	1932	1933
	%	%	%	%
Germany ...	6.3	6.5	8.0	7.3
France ...	5.4	5.0	1.5	1.4
Italy ...	2.6	3.9	5.3	3.2
Belgium ...	2.4	3.5	3.8	2.5
U. K. ...	29.4	28.4	35.8	41.2
U. S. A. ...	7.3	9.5	9.8	5.5
Japan ...	7.9	9.7	15.4	15.3

CASE FOR DEVALUATION UNAFFECTED

However, the fact that the rupee has been relatively under-valued in relation to gold currencies and has yielded the advantage of depreciation in India's trade with gold standard countries does not at all lessen the urgency for the necessary devaluation even in terms of sterling against which our rupee still remains over-valued. As I have already pointed out, India's claim for devaluation is suggested not by the thought of taking any undue advantage of depreciated currency but by the legitimate grievance against an initial over-valuation that has been persisting from 1927.

Value and Percentage increase of India s exports to the Sterling and Gold group of countries.

	6 months April to Setr.		Percentage increase
	1932	1933	
Sterling Group ...	30 Crores	34 Crores	13.3
Gold Group ...	12 ,,	14 ,,	16.6

It is clear that India's exports to countries in relation to which she enjoys the advantage of devaluation have increased more than to those against which she has no such advantage.

EXPERIENCE OF U. K. AND U. S. A.

It has been said that since September 19, 1931 'neither Great Britain nor the United States have been able to raise the price level by monetary action'. On the contrary, the following figures taken from a table relating to sterling and international prices published in the Economist dated the 18th November, 1933, show that prices of primary products have appreciably risen in England since September 1931 and also in the U. S. A. since April 1933 following the suspension of gold standard in that country.

Index of Prices

September 18, 1931—100.

(Primary products).

	Br. Sterling	American Dollar
1932 January 27th ...	115.7	
August 24th ...	111.8	
December 28th ...	109.3	
1933 April 19th ...	104.6	88.7
May 31st ...	116.3	108.5
June 28th ...	118.2	117.4
July 26th ...	120.6	124.7
August 23rd ...	116.9	119.0
September 20th ...	116.9	120.7
October 18th ...	112.8	109.1
November 15th ...	113.8	122.0

It will be noted from the above table the price of primary commodities as recorded in November 1933 marked an increase of 13 per cent. in the U. K. sice September 1931 and about 38 per cent. in the U. S. A. since April 1933, the percentage recorded during the intervening period being even higher than these figures.

CONTRAST WITH CASE OF INDIA

Against these figures the comparative price statistics of the primary commodities in India which are faithfully reflected in the price movements of the articles of export afford a pitiable contrast.

Indian Index Number Series

(1873—100).

	Exported Articles
1931 December ...	123
1932 December ...	120
1933 March ...	115
Fall in March 1933 as compared with December 1931	6.5%

The fall would be found to be greater still if the latest figures were compared with the figures before September 21, 1933. It is impossible to exaggerate the urgency for devaluation of the Rupee in the face of such pronounced disparity between the price movements of primary products in India and the U. K.

(*Continued from page 1527*)

reserve in the East at the expense of the Indian taxpayer. But they have admitted that the Empire derives substantial advantages from the existence of the Indian army and should, therefore, be prepared to bear its part of the burden of military expenditure incurred in India.

The Tribunal has also shown a similar fair-mindedness in dealing with this question of the counter-claim of the War Office that "it did, in fact, maintain a larger reserve than it otherwise would have done in order to provide for Indian requirements," and that, therefore, Indian revenues should contribute to the maintenance of the general Imperial reserve and should accept entirely the maintenance of a specific reserve for India. The Tribunal has come to the conclusion that India should not contribute to the general reserve. The question of a specific reserve, they urge, is of a more technical nature; but as there has so far been no finding on the part of a competent authority that such a reserve should be maintained for India, the question of payment for the specific reserve does not arise for consideration at the hands of the Tribunal.

In respect of the sea-transport contribution paid by the War Office to India, the Tribunal decides that it should be continued at the present rate of £130,000 a year. The acceptance of these recommendations by His Majesty's Government and the Government of India means that on account of the capitation charges, there will be a net saving to India of £107,000 a year, taking together the payments due to the War Office and to the Air Ministry. A contribution of £1,500,000 a year will be made from the Imperial revenue towards defence expenditure from Indian revenues as from April 1st 1933. As the amount includes the Sea Transport contribution of £130,000, which has been regularly paid in the past, the net gain on this account comes to only £370,000. Taking into consideration various adjustments on certain minor details, the total result of the decision of His Majesty's Government on matters connected with the enquiry of the Tribunal is a gain to India estimated at £1,417,000 a year or about Rs. 1,88,00,000.

As this issue of *Indian Finance* is brought out a day earlier than usual and as we are not yet in possession of the full text of the report of the Tribunal, we are not in a position to go in details into the data on which the Tribunal have based their judgment. While we may postpone to a later issue our comments on the amounts awarded to India on account of the contribution of the Imperial revenues to Indian revenues, we might urge here that the Tribunal has somewhat summarily dismissed the claims of India regarding the return of the unduly heavy capitation charges that had been paid in the past. We find in the short summary, on which we have based our comments, that it has been decided that all arrears up to April 1st 1933 should be cancelled. We do not see how, in view of the arbitrary increase effected from time to time in the capitation charges and in view of the finding of the Capitation Tribunal that a reduction in this regard is equitable, the claims of India to the return of amounts paid in the past can be easily set aside. We had for a long time entertained the hope that the findings of the Capitation Tribunal would result in an appreciable relief to the Indian Exchequer both by way of remission of past payments and by way of reduction in our future liabilities. While it is, indeed, out of the question that the British Government and the Government of India would err on the side of generosity to the Indian taxpayer, it might be said, on the whole, that the relief now afforded falls far short of the expectations entertained in this country.

RESERVE BANK BILL IN FINAL STAGE

"Hillbird" wires from Delhi:

To-day the Reserve Bank Bill reached the stage of third reading and speeches were aimed not at discussing the merits of the Bill but at settling accounts, paying off old scores. Sir George Schuster frequently lost temper and used harsh, almost unparliamentary expressions wherefor Mr. B. R. Puri gave severe thrusts. Sir Cowasji Jehangir, and Messrs. Ramaswami Mudaliar and Mody came in for bitter denuciation by Mr. Puri for having abetted the Finance Member in his designs to fasten on India the Bill which would injure, rather than promote the cause of the country. The only popular success has been the adoption by Government of a new clause enjoining the opening of an Agricultural Credit Department which has immense possibilities for beneficial work, provided it is sympathetically handled by Bank Officials. To-morrow the debate concludes and the house would pass the Bill, probably without a division; but considering the tenor of the speches to-day, there will be acrimonious rejoinders, charges, and counter-charges to-morrow. Mr. C. S. Ranga Iyer, who has been throughout applauding Sir George and yet pretending by few speeches to be on the popular side, was smarting most under Mr. Puri's slashing exposure of the various categories of the Government suppoters. Mr. Mudaliar had more than his due share of the attack from Messrs. Pandya and Puri. But when all is said, it is but fair to pay tribute to the ability and capacity of Sir George Schuster in piloting a bill of such importance and carrying the majority in his pocket.

INDIAN REVIEW

A TOPICAL NUMBER.

The place of honour in the December or Special Number of the *Indian Review* (Price 8 As. G. A. Natesan & Co., Madras) is given to a striking article from the pen of Col. Sir Kailas N. Haksar, C.I.E. Writing on "Tactics (And) Or Strategy"? he points out that "Liberalism has a Star part to play on the future political stage of India" and he calls upon "Indian Liberals to bind themselves into a "compact body" and live up to their name. In Politics as in War there is need for tactics as well as for strategem and no minor differences among them should be allowed to come in the way of making the future federation of States and British India, a success. Mr. C. S. Rangaswami, Managing Editor of the *Indian Finance*, follows with a lucid and tranchant criticism of the Reserve Bank Bill as evidenced by the Dissenting Minutes to the Select Comittee Report. Dr. J. M. Kumarappa, M.A., Ph.D., writes on "The Fascist Experiment in Civic Education"; Prof. P. Ganesh Rao who has just returned from the U. S. A., discusses the position of what are known as "The Untouchables of America," while Mr. S. Satyamurti writes on "Capture the Councils". The Number is packed with topical articles including a lengthy sketch of Vithalbhai Patel, and the late King Nadir Shah of Afghanistan. Among other articles of interest in this issue are: "A Contemporary Bengali Novelist" by Dr. J. K. Das Gupta, M.A., Ph.D., "The Sacrifice: A Legend of Ancient Egypt" by Mr. John Russell; "Czechoslovakia"; "On Great Retorts" by Prof. B. Tundon, M.A.; "East and West" by Mrs. Vinodini-devi Gaikwar, B.A., LL.B.; "Insurance Capital Quo Vadis?" by Mr. K. B. Madhava, A.I.A. (Lond.); "Prison Problems in England" by Mr. Horace Wyndham; "Indian Affairs" by 'An Indian Journalist' and "World Events" by Prof. A. J. Saunders M.A., Ph.D.; "Trade and Finance" by "Srivas". This Special Number is profusely illustrated containing no less than 13 Illustrations. The notes and news on Indians in the States and Overseas, the World of Books and Topics from Periodicals and the sections of the *Review* are all as interesting, varied and copious as ever. "The Publishers announce that this Number which is sold at As. 8 is given *free* to new subscribers who enrol themselves for 1934 by remitting Rs. 5 the annual subscription.

STATISTICAL INFORMATION

RAILWAY EARNINGS

The total approximate gross earnings of all State-owned Railways for the week ending 25th November, 1933 (34th week), amount to Rs. 168 lakhs, Rs. 1 lakh Less than the figures for the last week and Rs. 3 lakhs more that the figures for the corresponding week of the previous year and Rs. 8 lakhs Less than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April to 25th November, 1933, amount to Rs. 53.27 crores or Rs. 94 lakhs more than the figures for corresponding period of the previous year and Rs. 10 lakhs Less than the corresponding period of 1931-32.

The following are the up to date approximate gross earnings of the State-owned Railways from 1st April, 1933, as compared with the actuals of the corresponding period of last year.

Railways	Up to 25-11-32 (in lakhs) Rs.	Up to 25-11-33 (in lakhs) Rs.
A. B.	102	99
B. N.	433	454
B. B. & C. I.	626	645
Burma	201	213
E. B.	309	325
E. I.	1,092	1,089
G. I. P.	700	714
M. & S. M.	419	444
N. W.	872	860
S. I.	349	345
Tirhoot & Lucknow, Bareilly ...	110	115
Other Railways	20	24
Total ...	5,233	5,327

A comparison with the figures of the previous week for the principal State-owned Railways shows Decreases in the approximate gross earnings of the A. B., B. B. & C. I., E. B., E. I. and N. W. A comparison with the figures of the corresponding week of 1932, shows Increases in the approximate gross earnings of all principal State-owned Railways except the A. B., B. B. & C. I., E. B., E. I., and Tirhoot and Lucknow Bareilly.

During the week ending 25th November, 1933, there were loaded on the broad gauge 78,397 wagons, being 3,352 More than in the corresponding week of the previous year, or an Increase of 4.47 per cent. On the metre gauge there were loaded 51,009 wagons, being 6,069 More than in the corresponding week of the previous year, or an Increase of 11.9 per cent.

For the period from 1st April to 25th November, 1933, there were loaded on the broad gauge 2,424,111 wagons, being 162,180 More than in the corresponding period of the previous year, or an Increase of 7.17 per cent. and on the metre gauge 1,535,987 wagons, being 161,482 More than in the corresponding period of the previous year, or an Increase of 11.1 per cent.

Working Expenses

The following are the approximate ordinary working expenses including suspense but excluding appropriation to and from depreciation fund of the State-owned Railways from 1st April to 30th September, 1933, as compared with the actuals of the corresponding period of last year:—

Rsilways	Up to 30-9-32 (in lakhs) Rs.	Up to 30-9-33 (in lakhs) Rs.
A. B.	52	55
B. N.	236	242
B. B. & C. I.	270	269
Burma	108	110
E. B.	163	161

M. & S. M.	156	172
N. W.	431	450
S. I.	146	130
Tirhoot and Lucknow Bareilly ...	35	37
Other Railways	9	10
Total ...	2,393	2,420

INDIAN CUSTOMS REVENUE.

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of November, 1933, amounted to Rs. 4,27 lakhs as against Rs. 4,34 lakhs in the preceding month and Rs. 4,89 lakhs in November, 1932. The total revenue realised in the eight months ended November, 1933, was Rs. 32,32 lakhs as compared with Rs. 35,89 lakhs during the same period last year. Imports duties accounted for Rs. 23,65 lakhs of this amount, export duties Rs. 2,95 lakhs, excise duties on motor spirit and kerosene Rs. 2,98 lakhs and Rs. 1,88 lakhs respectively and Land Customs and Miscellaneous Rs. 86 lakhs. Increases were noticeable under import duties on machinery, motor cars, liquors, dyes and colours, wheat, tea, betelnuts, lubricating oils, wood pulp, railway plant and rolling stock paper and stationery, toys, games and sports goods, and cinematograph films, exposed; export duties on jute, raw and manufactured, and hides and skins, raw, excise duties on motor spirit and kerosene and land customs receipts also showed increases. On the other hand, import duties on cotton piecegoods, sugar, raw cotton, Iron and steel, kerosene metals other than iron and steel, motor spirit, cotton yarn and thread, pneumatic rubber tyres and tubes, tobacco, unmanufactured, silver, silk and artificial silk mixtures, artificial silk yarn and thread, cutlery and hardware, tobacco, manufactured, molasses, silver wire and thread, and electric lighting bulbes showed noticeable decreases. The protective special duties on private imports during the eight months ended November, 1933, aggregated Rs. 7,42 lakhs. The duties on Government stores, inclusive of protective duties collected thereon, amounted to Rs. 14 lakhs, as compared with Rs. 25 lakhs in the corresponding period of the preceding year

MYSORE GOLD MINES OUTPUT

The following are the returns of the Mysore Gold Mines for the month of November, 1933:—

Champion Reef.—10,040 tons current ore treated produced 4,870 fine ozs. and 17,676 tons old tailings produced 437 fine ozs., making a total of 5,307 fine ozs. of gold.

Mysore.—15,010 tons of current ore treated produced 7,729 ozs. of fine gold.

Ooregaum.—12,005 tons of current ore treated produced 3,084 oz. of fine gold and 20,995 tons of old dump sand retreated yielded 1,056 fine ozs. of gold, making a total of 33,000 tons and 4,141 ozs. of fine gold.

Nundydroog.—18,000 tons of current ore yielded 9,686 fine ozs., 2,588 tons of old dump sand retreated yielded 164 fine ozs. making a total yield of 9,905 ozs. of fine gold.

Burma Corporation Limited—Bawdwin Mine.—During the month of November 37,742 tons of ore were mined. 31,800 tons of ore were milled in the Treatment Plant producing 12,842 tons of Leady Concentrates.

13,209 tons of Lead-bearing material were smelted in the Blast Furnaces, producing 7,031 tons Hard Lead in the Blast Furnaces, producing 7,031 tons Hard Lead for treatment in the Refinery.

PAINT PRODUCTS IN INDIA

Prior to 1931 British India imported about 14,500,000 rupees worth of paint products. These imports have been reduced in recent years owing to restricted purchases and progress made by the domestic industry in the manufacture of these materials.

For the fiscal years 1930-1931 and 1931-1932 total imports of paints pigments, and varnishes were respectively £16,812,850 and 8,753,101 rupees. Great Britain is the leading country of origin for the imports and is represented in the trade by approximately 73 per cent.; followed by Germany 7 per cent.; United States, 5 per cent.; Belgium, 3 per cent.; and Japan, Netherlands, and Italy each with 2 per cent., while the small balance was furnished by other countries.

Official data released in 1932 by the Government reported that in 1929 there were 9 paint factories employing 1,628 persons operating in India. This year four of these factories closed down but two additional plants were placed in operation in Bombay. Three of the largest plants are owned by British firms while another is closely associated with one of the largest manufacturers of paints in Great Britain.

COMPANY REPORTS

INDIAN JUTE CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	87,30,000	Black (net) ...	16,66,546
Reserves ...	5,05,000	Jute, etc. ...	27,18,557
Debts ...	62,26,734	Stores ...	1,17,151
Profit & Loss ...	1,24,220	Outstandings ...	87,28,678
		Investments ...	22,33,660
		Cash & Deposits	1,21,362
Total ...	1,55,85,954	Total ...	1,55,85,954

Extracts from Directors' Report:

Report for the half-year ended 30th September, 1933.

The net result of the half-year's working, after making allowances for Depreciation, etc., is a profit of Rs. 71,955-12-6, to this has to be added the balance at credit of Profit and Loss Account brought forward from the last Account Rs. 52,264-8-2, making an available balance of Rs. 1,24,220-4-8, which the Directors recommend be carried forward.

Jute in stock has been valued at or under cost price and cloth and bags at contract and market rates.

In accordance with the existing agreement amongst the members of the Indian Jute Mills Association, the Company's Mills continued to work 40 hours weekly on the single-shift system with 15 per cent. of the total looms sealed.—J. S. Henderson, G. W. Leeson, Balfour Smith, A. O. Brown, W. A. M. Walker, Directors.

NEW BEERBHOOM COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	19,76,230	Block (net) ...	17,87,884
Reserves ...	6,98,893	Coal & Coke ...	57,860
Zemindary A/c.	50,284	Stores, etc. ...	1,01,266
Debts ...	2,24,384	Zemindary A/c.	50,651
Profit & Loss ...	1,11,048	Outstandings ...	2,87,309
		Investments ...	3,35,887
		Cash & Deposits	3,39,982
Total ...	30,60,839	Total ...	30,60,839

Extracts from Directors' Report:

Report for the half-year ended 31st October, 1933. The Revenue Account shows a profit of Rs. 1,16,100-9-2.

After providing Rs. 78,489-9-6 for Block Depreciation there remains a balance of Rs. 111,047-15-3 available at the credit of Profit and Loss Account which the Directors propose to deal with as follows:—To Dividend on Preference Shares at 7 per cent. per annum Rs. 7,000, to Dividend on Ordinary Shares at 5 per cent. per annum Rs. 44,405-15, carry forward Rs. 59,642-3-3, total Rs. 1,11,047-15-3.

The total raisings of all classes of coal were 221,545 tons which compare with 274,410 tons in the preceding period and 201,402 tons in the corresponding half of last year.

The total raisings of all classes of coal were 221,545 270,335 tons in the preceding half-year and 224,296 tons in the same period in 1932.

There has been no change for the better in conditions during the past half-year and failing agreement between all Colliery concerns in some form of restriction scheme, no improvement in the prospects facing the industry can be expected.—A. E. Mitchell, W. M. Craddock, Hari Sanker Paul, H. C. W. Bishop, Directors.

AMALGAMATED COALFIELDS, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	10,68,060	Block ...	11,77,002
Reserves ...	3,65,000	Coal ...	1,483
Debts ...	1,78,447	Stores ...	42,107
Profit & Loss ...	64,293	Outstandings ...	1,29,290
		Cash & Invests.	3,25,918
Total ...	16,75,800	Total ...	16,75,800

Extracts from Directors' Report:

Report for the half-year ended 30th September, 1933.

The working for the half-year shows a gross profit of Rs. 37,754-2-8, to which has to be added:—The amount brought forward from last half-year Rs. 9,718-12-10, making a total of Rs. 1,47,472-15-6. After providing for:—Depreciation Rs. 42,303-13-10, Reserve for Taxation and Managers' Commission Rs. 25,876-10, General Reserve Rs. 15,000, equal to Rs. 83,180-7-10, there remains a balance of Rs. 64,292-7-8, which the Directors recommend should be dealt with as follows:—In payment, on application, of a dividend at the rate of 10 per cent. per annum, free of Income-tax Rs. 53,403, leaving to be carried forward Rs. 10-889-7-8.

Output and despatches of Steam and other grades of coal as compared with the two preceding half-years were as follows:—

	Output Tons	Despatches Tons
Half-year ending 30-9-1933 ...	158,698	158,011
,, ,, 31-3-1933 ...	170,865	172,079
,, ,, 30-9-1932 ...	145,510	146,628

Working Results.—Despatches for the period under review show some improvement over the two preceding monsoon periods, but Eklehra Colliery remains closed, the remaining Collieries being able to meet the current demand in full.

During the current half-year Electric Power has been extended to Bhamori and Jatachappa Collieries, which should reduce pumping costs considerably. It is proposed to introduce coal cutting machinery into Bhamori Colliery at an early date.

Owing to the prevailing weakness in the coal market generally, prices for the current year are slightly lower than usual.—Shaw Wallace & Co., Managing Agents. Calcutta. 30th November, 1933.

BENGAL COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	40,00,000	Block (net) ...	67,90,753
Reserves ...	61,51,950	Coal & Coke ...	5,67,937
Debts ...	6,02,364	Stores ...	1,65,957
Profit & Loss ...	2,29,736	Outstandings ...	15,41,621
		Investments ...	14,15,921
		Cash & Deposit	5,01,861
Total ...	1,09,84,050	Total ...	1,09,84,050

Extracts from Directors' Report:

Report.—For the half-year ended 31st October, 1933.

After writting off Rs. 75,000 for Depreciation there is a balance at the credit of Profit and Loss Account of Rs. 2,29,736-13-2 from which the Directors recommend:—Dividend of Rs. 4 per share Rs. 1,60,000, Provision for Commission to Directors, Managing Agents and Staff Rs. 11,600, carry forward Rs. 58,135-13-2.

Raisings amounted to 377,824 tons against 447,746 tons and 390,576 tons in the two preceding half-years.

Despatches were *476,177 tons against 545,003* tons in the half-year ended 30th April, 1933, and 531,016 tons in the half-year ended 31st October, 1932.

Prices have fallen to an extent that has exceeded the benefit obtained from the reduction in raising costs effected during the past two half-years.—O. M. Jatia, Henry Birkmyre, Uday Chand Mahtar, Maharaj Kumar of Burdwan, A. Aikman Directors.

MEGNA MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	61,23,000	Block (net) ...	99,42,379
Reserves ...	3,50,000	Jute, etc. ...	34,48,783
Debts ...	85,67,283	Stores ...	88,368
		Outstandings ...	4,35,552
		Cash & Deposits	1,11,137
		Profit & Loss ...	10,14,964
Total ...	1,50,41,183	Total ...	1,50,41,183

Extracts from Directors' Report:

Report.—For the half-year ended 30th September, 1933.

The net result of the half-year's working, after making allowance for Depreciation, is a loss of Rs. 1,44,589-5-2, to this falls to be added the debit balance brought forward from the last Account Rs. 8,70,374-9-6, leaving a balance at debit of Profit and Loss Account to be carried forward Rs. 10,14,963-14-8.

Jute in stock has been valued at or under cost price and finished goods at contract and market rates.

In accordance with the existing agreement amongst the members of the Indian Jute Mills Association, the Company's Mills worked 40 hours weekly on the single shift system.—J. S. Henderson, G. W. Leeson, Balfour Smith, A. O. Brown, W. A. M. Walker, Directors.

Extracts from Directors' Report:

Report.—For the year ended 30th September, 1933.

The following table shows the statistics of traffic for the past threeyears:—

	1930-31.	1931-32.	1932-33.*
Number of Passengers ...	652,446	609,060	556,203
Gross Earnings (in Rupees)	3,13,643	3,00,270	2,58,704
Merchandise (in Tons) ...	202,330	135,396	102,414
Gross Earnings (in Rupees)	6,61,719	4,60,465	4,37,284

Road-Rail Conference.—The joint representation from all the Branch Line and Light Railways in India on the subject of the loss of traffic to Railways from motor competition, a copy of which accompanied the Directors' report last year, has been considered by the Government of India Officers who were deputed to go into the question of Rail and Road Co-ordination in all parts of India and was printed in their Report. Their Report formed the subject of the Road-Rail Conference which was held in Simla towards the end of April last, at which all the Branch Line and Light Railways in India were represented by the Chairman of this Company. It is hoped that some definite action will be taken by the Government of India on the resolutions passed at the Conference and, in justice to all those who have invested their money in Railway Securities, that such action will not be much longer delayed.

General.—The working of the lines for the year under review, including the sum of Rebate estimated to be due amounting to Rs. 95,267-8-10, shows a net profit of Rs. 4,12,328-9-8. To this must be added the sum of Rs. 12,399-12-4 brought forward from last year's Account making Rs. 4,24,728-6-0 in all.

The Directors declared an ad-interim dividend at the rate of 3½ per cent. per annum less Income-tax which absorbed Rs. 1,64,500, leaving a balance of Rs. 2,60,228-6-0 available for disposal, which they propose to apply as follows:—Dividend for the second half-year ended 30th September, 1933, at the rate of 4½ per cent. per annum (making 4 per cent. for the year) payable less Income-tax Rs. 2,11,500, balance to be carried forward Rs. 48,728-6-0, total Rs. 2,60,228-6-0.—E. C. Reid, Purshotamdas Thakurdas, Byramjee Jeejeebhoy, Frederick F. Stileman, R. H. Irani, Directors. Killick, Nixon & Co., Agents.

MAYURBHANJ RAILWAY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	22,25,000	Block ...	23,70,718
Debts ...	3,14,195	Brokerage, etc. ...	99,410
Profit & Loss ...	1,43,385	Outstandings ...	81,972
		Cash, etc. ...	1,30,480
Total ...	26,82,580	Total ...	26,82,580

Extracts from Director's Report:

Report for the year ended 31st March, 1933.

Capital.—Up to the end of March, 1933, the total amount charged to Capital was Rs. 24,70,127-9-2.

Revenue.—The gross earnings for the year amounted to Rs. 1,13,965-0-0, which is equivalent to an average earning of Rs. 31-0-3 per mile per week. After providing for all charges received from the Bengal-Nagpur Railway, there is at the credit of the Net Revenue Account a sum of Rs. 1,43,385-4-0. It is proposed to pay a dividend of Rs. 2-0-0 per share (free of Income-tax and Surcharge), absorbing Rs. 44,500-0-0, leaving a sum of Rs. 98,885-4-0, to be carried forward.

During the year under review the Bengal-Nagpur Railway discovered that, owing to a faulty application on their part of the Rebate clause of the Principal Agreement with the Mayurbhanj Railway, they had in error previously paid the latter railway rebates in excess of the amounts payable under the Agreement.

On this account the Bengal-Nagpur Railway claimed and recovered a refund of Rs. 33,029-0-0 from the Mayurbhanj Railway.

—C. C. Miller, R. N. Mookerjee, W. M. Craddock, Directors, Hoare, Miller & Co., Ld., Managing Agents. Calcutta, 17th November, 1933.

DEHRI-ROHTAS LIGHT RAILWAY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	7,52,600	Block ...	11,85,879
Reserve ...	5,13,170	Stores & Coal ...	65,531
Debts ...	9,137	Outstandings ...	96,704
Profit & Loss ...	83,541	Cash ...	10,364
Total ...	13,58,478	Total ...	13,58,478

Extracts from Directors' Report:

Report—for the half-year ended 30th September, 1933.

Capital.—The total Capital Expenditure as at 30th September, 1933, is Rs. 11,85,879 as shewn by the accounts.

Revenue.—The gross earnings amounted to Rs. 66,844 and the working expenses to Rs. 47,993.

Profit and Loss Account.—The profit on the half-year's working is Rs. 18,851.

After adding Rs. 68,256 brought forward from the previous half-year, Rs. 143 from Sundry Adjustments, and providing Rs. 3,709 for Income Tax, there remains a balance of Rs. 83,541, which it is prosed to deal with as follows:—Pay a Dividend at the rate of 2½ per cent. per annum for the six months ended 30th September, 1933, Rs. 9,375, leaving to be carried forward to next half-year Rs. 74,166, total Rs. 83,541.

Telegraph Line worked satisfactorily and the total receipts amounted to Rs. 558.

Prospects.—The construction of the Sugar Mill at Dehri-on-Sone is approaching completion and arrangements for the carriage of its cane and lime requirements have been made with the proprietors at rates which should prove profitable to this Company.—H. Carey Morgan, Eric Studd, Lakshmi Prasad Singh, T. H. L. Brown, Directors. Octavius Steel & Co., Ld., Managing Agents.

MADRAS AND SOUTHERN MAHRATTA RAILWAY CO., LD.

The decline in the traffic which set in three years ago has continued, and the results for the year ended 31st March last, are the lowest for any year since 1921-22. This, states the report, was to be expected in view of the continued and accentuated world-wide depression, and every railway in India has suffered from its effects. Recent events appear to indicate that the greatest depths of the depression were reached in 1932-33. Signs of definite improvement have since become noticeable, and it may, with some confidence, be hoped that 1933-34 will begin a recovery and that results hereafter will again show an upward trend. The net earnings of the State and Company's railway, excluding all earnings and expenses relating to branch lines worked under separate contracts, amounted in 1932-33 to Rs. 2,91,75,134, and the surplus profit divisible between the Secretary of State and the Campany was Rs. 1,86,81,589, of which the Company's proportion was Rs. 54,77,960. Excluding the guaranteed interest of 3½ per cent. per annum, the surplus profits received in India, after deducting taxes, was Rs. 23,64,961. The Company's share of the surplus profits of the Mysore State Railway was Rs. 59,596, so that the Company's combined surplus profit was Rs. 24,24,557. When remitted to England this produced £182,393. An interim dividend of 4 per cent. was paid on 1st July and a final payment of 5 per cent. (1½ per cent. guaranteed interest and 3½ per cent. from revenue) is to be made on 1st January, making a total distribution for the year of 9 per cent. (against 10 per cent.).

BENGAL ASSAM STEAMSHIP CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	28,00,000	Block (net) ...	30,27,724
Reserves ...	9,56,698	Stores ...	575
Debts ...	4,52,035	Outstandings ...	1,75,519
Profit & Loss ...	2,97,424	Cash & Invests.	8,02,339
Total ...	40,06,157	Total ...	40,06,157

Extracts from Directors' Report:

Report—For the year ended 31st October, 1933.

After setting aside Rs. 2,50,000 for Depreciation there is, at credit of Profit and Loss Account Rs. 2,97,423-14-1 from which the Directors recommend dividends on:—Preference Capital at the rate of 7 per cent. per annum Rs. 21,000, ordinary Capital at the rate of 10 per cent. per annum Rs. 2,00,000, the balance Rs. 76,423-14-1 to be carried forward.

The fleet generally has been maintained in thorough repair and is in good order.

The Directors regret to report that in the month of June, 1933, the S. L. **Reliable** was involved in a collision

with another vessel near the Howrah Bridge and was lost.—David Ezra, A. Aikman, Directors.

BRITISH INDIA STEAM NAVIGATION CO., LD.

The continued depression in trade has caused a further diminution in earnings of this Company—a subsidiary of the P. and O. Steam Navigation Company—but to some extent this has been offset by effecting further economies. The net profit for the year ended 30th September amounted to £165,430. This compares with £168,003 for 1931-32, but it should be noted that whereas the figure for 1932-33 includes a surplus of £107,932 on sale of steamers, no such extraneous revenue was received last year. Before striking the profit £240,000 (against £230,000) has been applied to depreciation of the fleet. This is considerably short of a full year's depreciation at 5 per cent. per annum, but owing to precedent writing down in past years the book value of the steamers (£5,264,000) is still £4,037,871 below the value on the basis of writing off 5 per cent. per annum on the original cost. A further sum of £54,798 has been applied to depreciation of certain properties and investments. The dividend on the two classes of Preference stock is being paid, absorbing £145,000, but, as already announced, for the first time in the Company's history no distribution is to be made on the Ordinary shares. The balance carried forward is raised from £26,500 to £46,930. A large surplus of liquid assets is shown by the accounts, stocks, debtors, cash, and investments in British Government securities totalling £1,707,977, against current liabilities of £850,634. The Company has entered into a working agreement for certain trades in India with the Scindia Steam Navigation Company. During the year six vessels were sold; the others being sold for breaking up. Since closing the accounts four more vessels have been sold for breaking up.

PENINSULAR AND ORIENTAL STEAM NAVIGATION CO., LD.

In the report for the year ended 30th September last, the directors are able to announce improved conditions in more than one sphere of the company's operations. They state that the reorganization of services which was initiated in February, 1932, has been in full operation throughout the past year and that it has shown great economies and operates to the mutual advantage of the company and its supporters. The fleet has been navigated without casualty or accident of any consequence. The contract for the carrying of His Majesty's mails has been performed with the customary regularity. In response to the wish of the British community at Tangier, a weekly call at that port by both outward and homeward P. and O. ships was inaugurated in July 1st. It is hoped that the measure of support forthcoming will enable this call to be continued.

Owing to reorganization of the company's Calcutta service in conjunction with that of the British India Company, the directors are able to report improved results. Freights from Bombay showed some improvement during the year, and, although gold shipments from India declined in amount, they have still been considerable. Outwards to India there has recently been a slight increase in the amount of cargo. The company continues to suffer from the uneconomic subsidized competition of foreign lines.

As regards Australia, the directors state that conditions have continued to improve, and exports from that Dominion have increased in volume. A measure of rationalization of sailings in the Australian trade has resulted in homeward tonnage being somewhat more remuneratively employed. Exports to Australia, although still at a low ebb, have shown some expansion, and present indications lead to the hope that this will be maintained. Passenger traffic has again been indifferent, but it is hoped that the improvement in trade conditions which has lately manifested itself, increased bookings will be secured during the forthcoming homeward season.

The directors point out that although the results show some improvement they are insufficient to meet the annual charge for depreciation on a 5 per cent. basis. In view of this and of the continuing need to conserve the company's resources on account of the general situation with which British shipping is faced, no dividend is declared on the Deferred stock. Full depreciation on a 5 per cent. basis has been charged, amounting to £1,364,426, but the net charge against earnings is £707,456, the remaining £656,970 having been taken from the reserve for redemption of Debenture stocks—a reserve which is now freed following the repayment of the old Debenture stocks earlier this year.

The accounts again include a consolidated balance sheet of the company and its subsidiaries, and a comparison of the leading items with those of a year previously is subjoined:—

	30th Sept., 1933	30th Sept., 1932
LIABILITIES	£	£
Capital stock ...	13,765,315	13,765,315
Debenture capital	8,939,568	9,920,568
Interest in subsidiaries attributable to Ordinary capital publicly held	2,122,104	2,089,957
Reserves	18,508,188	19,119,220
Current liabilities:—		
Secured loans	2,715,500	3,349,755
Unsecured loans	600,000	1,691,638
Creditors, bills payable, taxation, etc.	7,217,248	7,585,071
ASSETS		
Fixed assets:—		
Fleets	30,301,400	32,876,602
Properties, tugs, etc. ...	2,448,192	2,469,553
Trade investments	8,659,481	8,685,460
Total	41,404,073	44,031,615
Floating assets:—		
Stores	666,862	855,364
Debtors, payments in advance, etc.	1,627,113	1,934,072
Investments	10,930,047	11,998,224
Cash	2,193,183	1,363,249
Total	15,417,205	16,150,909
Balance-sheet total ...	56,821,278	60,182,524

It will be seen that reserves total £18,508,188 and that against current liabilities for £10,532,748 there are floating assets totalling £15,417,205. Marketable securities are included at a lower figure than their quoted value. The valuation of the fleets, £30,301,400, is arrived at after deducting £54,771,330 for depreciation written off; it is pointed out that depreciation at 5 per cent. per annum would amount to £45,892,646. The P. and O. fleet contains 39 steamers and the allied companies have 304 steamers. The total gross registered tonnage of the 343 steamers is 2,154,458.

TITAGHUR PAPER MILLS CO., LD.

Report—For the half-year ended 30th September, 1933, after allowing for Debenture and General Interest, Commissions and Taxation, shows a profit of Rs. 6,28,570-8-1. There has been set aside for depreciation the sum of Rs. 2,84,939-8-11, whilst Rs. 20,000 has been transferred to the Indian Workers' Pension Fund Account, Rs. 60,000 to Debenture Redemption Fund Account, Rs. 10,000 to Indian Staff Pension Fund, Rs. 10,000 to Reserve for Bad Debts Account. A sum of Rs. 21,878-9-2 has been transferred to Reserve Account making the total sum at the credit of this Account now Rs. 4,00,000. The balance, remaining at the credit of Profit and Loss Account, after giving effect to these adjustments and transfers, amounts to Rs. 2,21,752-6-0.

The following is a statement showing how the above balance has been alloted to the respective Dividend Accounts in accordance with clause 3-A, Section 2, Sub-Section (a) of the Company's Articles of Association:—Balance available Rs. 2,21,752-6-0, preference dividend 8 per cent. per annum Rs. 46,000, ordinary dividend 10 per cent. per annum Rs. 21,875, total Rs. 67,875, leaving a balance Rs. 1,53,877-6-0, transfer half share of surplus profits to ordinary shareholders dividend account Rs. 76,938-11-0, transfer balance half share of surplus profits to deferred shareholders dividend account Rs. 76,938-11-0, total Rs. 1,53,877-6-0.

The division of the profits for the half-year ended 30th September, 1933, is therefore as follows:—Preference shareholders dividend account Rs. 46,000-0-0, ordinary shareholders dividend account Rs. 98,813-11-6 deferred shareholders dividend account Rs. 76,938-11-0, total Rs. 2,21,752-6-0.

In accordance with the terms of issue of the Deferred Shares there is no balance brought forward or carried forward in the main Profit and Loss Account. The balance due to each class of share is shown in the respective Shareholders Dividend Accounts in the Balance Sheet.

The balance at the credit of the respective Dividend Accounts is to be disposed of as follows:—Preference shareholders dividend account—Amount alloted as about Rs. 46,000, in paying a dividend on the preference shares at the rate of 8 per cent. per annum, free of Income-tax Rs. 46,000. Ordinary shareholdeds dividend account—Balance brought forward Rs. 1,807-7-5 amount allotted as about Rs. 98,813-11-0, total Rs. 1,00,621-2-5, in paying a dividend on the Ordinary shares at the rate of six annas per share, free of Income-tax, Rs. 65,625; in paying a bonus on the ordinary shares at the rate of three annas per share, free of Income-tax, Rs. 32,812-8-0; in carrying forward Rs. 2,183-10-5, total Rs. 1,00,621-2-5. Deferred shareholders dividend account—Balance brought forward Rs. 4,578-14-7, amount allotted as above Rs. 76,938-11-0, total Rs. 81,517-9-7, in paying a dividend at the rate of four annas per share, free of Income-tax, on 318,455 deferred shares which rank for dividend as from the 1st April, 1933, Rs. 79,613-12-0, in carrying forward Rs. 1,903-13-7, total Rs. 81,517-9-7.

The results of the half-year's working are satisfactory and production was increased during the period. The dividend recommended is equal to 11⅛ per cent. per annum on the value of the Ordinary shares prior to the reduction of Capital.

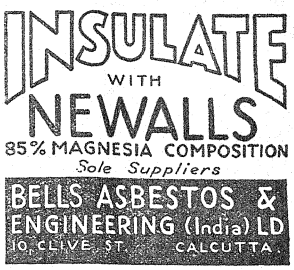
INDUSTRIES SUPPLEMENT



SURCHARGE ON SUGAR IMPORT

The report that the Bengal Chamber of Commerce intend to move in the next annual meeting of the Associated Chambers to be held on January 8, 1934, a resolution recommending the removal of the revenue surcharge on the import duty on sugar, is a development of disquieting import to the indigenous sugar industry. We understand that the resolution to be sponsored by the Bengal Chamber of Commerce runs as follows:

> "This Association invites the attention of the Government of India to the critical position of the sugar import trade caused by the crushing burden of taxation imposed upon it; and while recognising the need for the adequate protection of the indigenous sugar producing industry, the Association urges that consideration be given to the removal of the 25 per cent. surcharge imposed as a revenue measure under the Indian Finance (Supplementary and Extending) Act, 1931, thereby reducing the rate of duty from one of Rs. 9-1 per cwt to one of Rs. 7-4 per cwt which was the rate of protective duty recommended by the Indian Tariff Board".

The indigenous sugar industry has taken note of the movement for removal of the surcharge; and efforts are naturally being made to counteract the agitation that might be expected to follow the passage of this motion through the annual meeting of the Associated Chambers of Commerce. It is natural that no Indian interests make the mistake of underrating the significance of any suggestion proceeding from the Associated Chambers of Commerce. Apart from the influence which the representatives of British commerce in India may be expected to exert on the Government of India, we have seen on more than one occasion that the Government are not slow to act upon the suggestions of the European commercial bodies. The case of the Import Duties Act is as conclusive, as it is recent. Indian sugar has, therefore, good reason to feel that the cry of the Associated Chambers for the removal of the surcharge will not be altogether in vain, and would certainly call for energetic measures on their part to convince the Government that such a measure will not be either reasonable or necessary. We publish elsewhere in this issue an article from the Secretary of the Indian Sugar Mills Association discussing the significance of the surcharge to the industry as a whole, and the rationale of its removal at the present stage of the growth of the sugar industry in India. We commend the article for the careful consideration of those who are prepared to study and appraise the problem from the standpoint of broad public interest.

It would obviously be difficult for the Secretary of the Indian Sugar Mills Association to clear himself altogether of suspicions of partisanship in a discussion of a question so intimately connected with the prospects of the sugar industry in India. But we believe it will be conceded readily that Mr. Gandhi has succeeded in making a few points which affect appreciably the *a priori* belief that the Indian Sugar Mills should have nothing to say about the removal of a revenue surcharge, when such a removal leaves the import duty at the level recommended by the Tariff Board.

In examining this question it is necessary in the first place to consider the grounds on which the Bengal Chamber of Commerce suggest the removal of the revenue surcharge. The resolution, as, we understand, it has been drafted, invites the attention of the Government of India to the critical position of the sugar import trade caused by the crushing burden of taxation imposed upon it." Though, doubtless, the sponsors of this resolution will buttress in it other arguments when moving it in due course in the Associated Chambers, the wording of the resolution is important as indicating that the main purpose of the suggestion now put forward is to give a relief to the hard-pressed import trade. It is a question how far a measure, which is of vital interest to what might well be a staple industry of India, can be decided with reference to the conditions in import trade. In a country committed to a policy of protection the interest of the import trade as such must be considered to be altogether irrelevant. The conditions of the import trade are relevant only in finding out whether the burden of protection imposed upon the consumer is not more than it need be, and whether the equalisation of conditions of competition between the importer and the local producer will not help the maintenance of a fair selling price and prevent the exploitation of the consumer by the protected producer. It will follow from this that no action in regard to the import duties should be taken merely out of consideration for the import trade, and that any action taken in this regard will have to be justified either on the ground that the consumer needs, and is entitled to, relief, or on the ground that the additional protection afforded by the surcharge is not needed by the indigenous industry and may tend, if continued, to impair its efficiency.

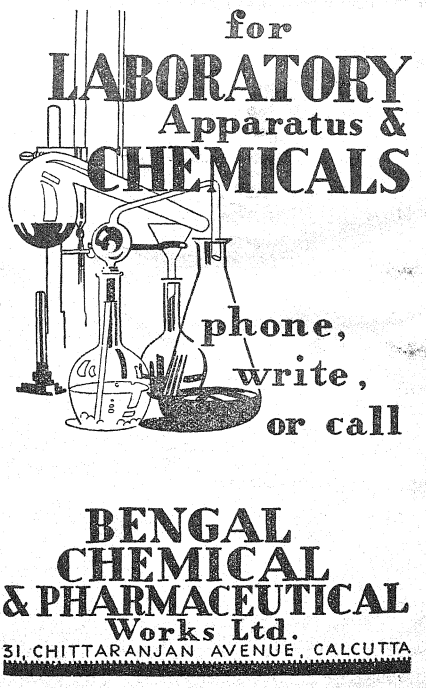
It is necessary to see if any one or more of these contentions are valid in the present instance. It is contended that the surcharge was made only for the

purpose of revenue, and that it afforded a protection to which the industry is not entitled and that, all that the Government should feel bound to give it is the protective duty recommended by the Tariff Board. It should need little argument to prove that this question of the removal of the surcharge can be viewed either from the standpoint of the Government's finance or from the standpoint of the needs of the industry. Taking the former, though the general improvement in the finances of the Government and the elimination of the colossal deficits of three years ago are undeniable, it would be idle to suggest that normal conditions have been restored. If the Central Government is, indeed, in a position to repeal the provisions of the Supplementary Finance Act of 1931, the order in which the victims of enhanced taxation are to be given relief is a question which has to be considered by itself. If it is so considered, nobody would contend that the consumers of imported sugar must come first in the list. Whenever one discusses the question of removing the surcharge on imported cuties, one has to remember that the import trade into India has not yet shown signs of recovery unless it be contended that the surcharges have themselves had the effect of cramping the import trade and so defeating the Government's purpose of getting enhanced revenue from these sources.

It would be premature to suggest that the Government of India can afford relief to the import trade by the removal of the surcharge. In other words, the proposal can be put forward more on the ground of its capacity to increase the governmental rate than on the ground that the Government can afford to dispense with it. If such a view be advanced, then again it would be necessary to point out that the conflict between the Government's interest in customs duty and protection to the indigenous industries, has to be handled with the greatest caution. When a country decides on a policy of protection, it has definitely to choose between the facilities of deriving revenue through indirect taxation of imports and the substantial long-term advantages of stimulating new productive activity. If the Government should look with equal longing on both these objectives, it is more than probable that both the objectives are lost and the whole affair is made a complete mess of. You cannot seek to continue to derive revenue from import duties and, at the same time, expect the development of the indigenous industries.

A better way of looking at the question of the removal of the surcharge is to look at it from the standpoint of the needs and conditions of the indigenous industry. It has been rightly contended that the industry is not entitled to the additional benefits derivable from the surcharge and that the case for such removal ought to be considered self-evident and the onus of proof left to rest on the other side. Against the substantial validity of this contention we can have little to say. But, some general considerations must be urged here as having a definite bearing on this question. Firstly, in these days of severe maladjustment of prices all over the world, it is not a mark of scientific attitude to make much of a rate recommended by the Tariff Board sometime ago. The Tariff Board's estimate of cost and fair selling price have necessarily to be based on the conditions obtaining at the time of the enquiry and the changes that have come about since the Board made its conclusions, have to be taken into full consideration before the industry is deprived of any advantage even if such advantage be gained in a wholly fortuitous manner. For instance, in the article from Mr. Gandhi published elsewhere in this issue, the fact that indigenous sugar producers are making practically nothing out of a cheap by-product like molasses, should serve to show that the State should not consider itself as having done all that it could to the industry by maintaining the protective duty at the level recommended by the Board. Moreover, it must be remembered that the development of the sugar industry in India has now come into an interesting stage. That is, the Governments of many of the Provinces in which the sugar industry was somewhat backward, have begun to take an active interest in its development within their own borders. They realise, that in the possibility afforded by the sugar industry they have some sort of escape from the baffling problems with which Indian agriculture has been confronted in the past few years. No one would suggest that the removal of the surcharge on the imports of sugar will not have the effect of damping the enthusiasm of the Provincial Governments in developing their own sugar industries and, generally, retarding the progress towards India's self-sufficiency in respect of sugar which the public has been taught to hope for from the time the policy of protection was begun.

It might be asked whether after all this is the time to make any serious change in the position and prospects of the sugar industry in India. Not only is there much ground to be covered in India in this matter, but we have at the back of all the recent development the incalculable danger of Holland being forced off the gold standard by the inexorable forces of events in international finance and exchanges. If the monetary policy of Mr. Roosevelt should have the effect of making it impossible for France to continue on the gold standard, and driving Holland to depreciate her currency, the effects of such development on the position of the Indian sugar industry is by no means easy to foresee in advance. Even if there be a valid case for the removal of the surcharge, we should certainly urge that this is not the time in which to make such a change, if only because we might before long be obliged to renew the position. It is part of wisdom and prudence to avoid constant disturbances in the position of a staple industry.



SURCHARGE ON IMPORTED SUGAR

ASSOCIATED CHAMBER'S PROPOSALS, GOVERNMENT'S DUTY TO INDUSTRY.

By

M. P. GANDHI, M.A., F.R.E.S., F.S.S.,

Secretary, Indian Sugar Mills Association, Calcutta.

Sugar Industry Accorded Protection in 1932

With the approach of the Budget Sessions of the Assembly rumours are afloat that the Government of India may remove with effect from 1st April 1934, the surcharge of 25 per cent. on the import duty on Sugar which was imposed as a revenue measure under the Indian Finance (Supplementary and Extending) Act, 1931. The present duty on imports of sugar is Rs. 9-1-0 per cwt., out of which Rs. 7-4-0 constitutes the protective duty as recommended by the Tariff Board and Re. 1-13 constitutes the surcharge.

Production of Sugar in Excess of Present Requirements

Since the grant of protection to the industry, the increase in the number of sugar factories has been very satisfactory in as much as over 100 sugar factories of about 600 tons cane-crushing capacity have been established within a year and a half of the date of the grant of protection. It is true that the quantum of protection recommended by the Tariff Board was Rs. 7-4-0 and that Re. 1-13 is only a surcharge imposed purely for revenue reasons and not with a view to add to the protection accorded to the sugar industry, though the surcharge has had, that effect. While the industry may not ordinarily be able to protest against the suggestion of abolition of this surcharge, which is purely a revenue measure, the present position of the industry, as will be shown presently, makes it absolutely imperative that the surcharge should continue, if the industry in which over 15 crores of rupees are invested only during the last two years, is not to come to grief. As the Government are aware, the production of sugar in the country has increased from 487,000 tons in 1931-32 to about 700,000 tons in 1932-33 and it is expected that during the year 1933-34 the total production will be not less that 11 lac tons, of which the production from factories alone would come to over 775,000 tons, the balance being production from indigenous methods (Vide Indian Sugar Industry, its past, present and future, by Mr. M. P. Gandhi). India has practically reached a stage where not only is she self-sufficient in regard to the requirements of sugar for home-consumption, but there is a clear necessity of finding export markets for her production, unless the consumption of sugar in the country goes up as a result of the improvement in the economic condition of the people. The import of sugar has gone down from 516,000 tons in 1931-32 to 401,000 tons in 1932 and only 162,000 tons during the seven months ended October 1933. India does not need to import any sugar at all except of very special quality to meet the requirements of those having a fastidious taste, and I expect that the import in 1934-35 will be less than 50,000 tons.

Interests of 18 Million Cultivators Threatened

Protection has been guaranteed to the sugar industry for a period of seven years, in the first instance and further eight years if necessary in order that the industry may be able to develop to an extent

which would make her independent of foreign supplies and stand on its own legs. Fortunately for this country such a stage has been reached only within two years of the grant of protection and if instead of appreciating the quick response of the industrialists in implementing the policy of protection inaugurated by the Government, the suscharge is removed, it will create a deplorable plight in the industry and will take away all confidence of the people in the *bona fides* of the action of the Government. What is more, the implications of the grant of protection to the sugar industry must be fully understood. Protection was granted to this industry, not only for the purpose of establishing sugar manufacturing in the country, but also, and largely, with a view to benefit the agriculturists. In fact, the Tariff Board observed that the strongest aspect of the case for protection is that based upon the national importance of promoting the cultivation of sugarcane. The expansion of the sugar industry has been a source of great satisfaction and relief to the ryots, particularly at the present time when the prices of almost all crops have fallen to an unremunerative level. The Government are also aware that in a large number of cases it has been possible for the agriculturists to pay their land-revenue also, because of the proceeds realised from the cane crop which is a cash crop. The retention of the surcharge is absolutely necessary if a crisis is to be averted, in the case of the manufacturers as well as the agriculturists. It is estimated that about 18 million people are directly interested in cane cultivation, and their interests will be seriously threatened if circumstances arise in which the area under cane diminishes.

Why Surcharge is Necessary

It may be argued that the industry enjoys fairly high protection of over 150 per cent. and there is no necessity of the maintenance of this surcharge. It is necessary to point out that there has been one important factor which has necessitated the increase in protection, and that is the calamitous fall in the price of molasses. When the Tariff Board examined the question of protection to the industry, the molasses fetched a price of Rs. 1-8 to Rs. 2 per maund. Due to overproduction of molasses a stage has now been reached when it requires some expenditure on the part of the factory owners to dispose of his molasses. Far from bringing any revenue to him, its disposal costs him money and it has become a nuisance. His cost of production has, therefore, gone up to that extent.

Why Surcharge is not Harmful to any one

It must also be pointed out that the retention of the surcharge on sugar is in no way harmful to the consumer and it is therefore futile to base any argument on the ground of bringing relief to the consumer, as it is well-known that due to the internal competition there has been a considerable fall in the price of sugar from 1932 onwards and the present position is that the price of *Indian sugar bears no relation whatever to price of imported Java white sugar.* It sells about Rs. 2 per maund lower than imported sugar. If the ruling prices of Indian sugar had any relation with, or were as high as, the prices of imported sugar, one could understand, in the interest of the consumers, the necessity of taking off the surcharge duty, on the ground that it would constitute an unnecessary burden on the consumer, and give an extra protection or profit to the manufacturer. The Government are well aware that the prices of Indian sugar are determined not in relation to the price at which imported sugar from Java is selling, but by internal competition, which is increasing, and constitutes the best safeguard in the interest of the consumer. Since the grant of protection, this cost of protection has considerably gone down, and it is likely that, as a result of the growing internal competition, the prices of Indian sugar will witness a further fall. Therefore, there is no weight in any

argument that may be adduced for the removal of the surcharge. In fact, if the duty on imported sugar were made prohibitive or even, if the import of sugar were completely stopped, the interest of the consumers would not suffer at all, and the manufacturer would make no more profit than he can or does at present, owing to the play of keen internal competition. Indeed, it might be observed with truth, that the sugar industry constitutes the best example for proving that the consumers have had to undergo the minimum of sacrifice, due to the rapid growth of the industry and the resultant keen competition.

Unsettlement of import trades inevitable.

The unsettlement caused to the import trade was an inevitable conclusion of the grant of adequate protection to the industry, and could be no argument for removal of the surcharge. The progressive reduction of import of sugar was a foregone conclusion; and instead of feeling worried at it, everyone having the interest of the country at heart should feel jubilant. The proposal of the removal of the surcharge can thus be made only on one ground, viz., of bringing revenue to the coffers of the State. But it is clear that for the sake of earning a small revenue, the State cannot take a measure which would bring calamity and grief to an indigenous industry, fostered deliberately by the Government by the imposition of a protective duty for a long number of years. If after deciding to promote this industry, and taking suitable action on it, the surcharge of Re. 1-13 per cwt., which has helped in the speedy development of this industry, and the continuance of which has been rendered necessary in view of the absence of any realisation for molasses, and the retention of which causes no harm to the consumers, is removed at this critical juncture on account of the demand made by a few interested persons engaged in importing sugar, or for purposes of getting revenue for the State, it would be nothing short of a crime against the manufacturers who have invested over 15 crores of rupees in establishing factories in the expectation of getting continued help from the State at least during the period of infancy of the industry, and against the 18 million agriculturists who extended the cultivation of their cane in the expectation of the increase of manufacture of sugar in the country. The area under cultivation has gone up from 29,00,000 acres in 1930-31 to 34,00,000 acres in 1933-34 and the yield of cane is expected to be 50,000,000 tons in 1933-34 as compared with 35,000,000 tons in 1930-31. The Tariff Board also recommended that if any real development in the sugar industry is to be secured, if new factories are to be established, land improvement and irrigation undertaken with a view to cane cultivation, it is essential that both the agriculturist and the industrialist should be assured of protection for at least 15 years.

Retrograde proposal of Associated Chambers for removal of surcharge

I hope and trust that the Government will pay no heed to the proposal of the Bengal Chamber of Commerce at the next Annual Meeting of the Associated Chambers of Commerce to be held in January, 1934, inviting the attention of the Government to the critical position of the sugar import trade caused by the crushing burden of taxation imposed upon it, and while recognising the need for the adequate protection of the indigenous sugar producing industry, urging the removal of the 25 per cent. surcharge on import of sugar.

Duty of the Imperial Council and Assembly.

I fervently hope that the Imperial Council of Agricultural Research owing to whose strenuous efforts, protection is granted to the industry, will appeal to the Government, in behalf of sugar cultivators and manufacturers, pointing out how detrimental the suggestion made by the representatives of European Commerce in India for the withdrawal of the surcharge on import of sugar would be, if accepted, to the cause of Indian agriculture and industry. Any such action, as has been suggested, on the part of the Government can only be interpreted as the index of their desire to let down the manufacturers and agriculturists who extended their activities in the sphere, relying on the Government's *bonafides*. On the contrary, it is the duty of the Government to watch the prices at which foreign sugar is being imported and if, as a result of Java's going-off the god standard or of other factors there is any possibility of sugar being imported in the country at a price lower than that manufactured in the country, to increase the production to such an extent that import of sugar would be impossible. As sugar-producing countries have high tariffs and regulation of imports, India should also take suitable action in such a manner to aid her industry. For if any imports of sugar are allowed to come into the country, the manufacturers as also the agriculturists would be faced with ruin in all parts of the country.

Growth of industry will receive rude shock

Bengal, Bombay, Madras which have not yet made suitable progress in the manufacture of sugar, have now started doing so and it is expected they will establish more factories next year. If however, the Government take any action of the character about to be suggested by the Associated Chambers of Commerce, at the instance of the Bengal Chamber, grave injury would be done to the agricultural and industrial interests in the country. It is surprising that in view of this growing interest in the province of Bengal, which let me incidentally observe, is very well suited for the development of the sugar industry, the Bengal Chamber should have thought it fit to make a proposal which would ruin the cultivators and damp the enthusiasm of the industrialists. I hope that industrial, agricultural, and general public opinion in India will express itself unequivocally in condemnation of this suggestion, and invite the attention of the Government to the great injury likely to be inflicted on the various provinces, as a result of the adoption of the step suggested by the Bengal Chamber. Personally I have no doubt that the Government will summarily dismiss this proposal of the Bengal Chamber of Commerce in the interest of the country. It is, however, their bounden duty to give an immediate and satisfactory assurance of that character to the industry, which they have sought to foster and to continue to take a sympathetic interest in the continued development of the industry with which the welfare of the agriculturists and manufacturers is closely bound up.

THE JUBBULPORE ELECTRIC SUPPLY CO., LTD.

NOTICE

is hereby given that the Fourteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 5th January, 1934, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from 29th December, 1933, to the 5th January, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Free of British Indian and Mysore Income Tax

Open from 15th December, 1933 to 15th March, 1934, inclusive subject to closure at any time without notice by Government

Subscriptions may be in Mysore Government 6¼% Loan 1940; 6½% Loan 1941-51 and 5½% Bonds 1938, Savings Bank Fixed Deposits as noted in the Notification.

A cash bonus based on the present value of the excess in interest of the current loans over 4% is payable at the following rates immediately:—

6¼% Loan 1940	**... Rs. 13-5-0 per Rs. 100,**	**face value.**
6½% „ 1941-51	**... „ 16-8-0**	**Ditto.**
5½% Bonds 1938	**... „ 6-10-0**	**Ditto.**

A special bonus of annas two per cent. will be allowed on applications for conversion of the above three loans received on or before the 25th January, 1934.

For terms of conversion of the various kinds of deposits please refer to the notification.

The holders may, if they so desire, tender the cash bonus and interest as subscription to the loan for further amounts in multiples of Rs. 100.

Brokerage will be allowed to recognised Brokers and Bankers at the rate of 3/32 per cent.

For further particulars, please refer to Mysore Government Notification No. Fl. 3147-55/G.F. 172-33, dated 11th December, 1933, or apply to the Comptroller, Mysore Government, Bangalore, or any interest paying Treasury in the State or any branch or head office of the Imperial Bank of India and of the Bank of Mysore, Ltd.

M. VENKATESA IYENGAR,

Comptroller.

BRITISH STEEL BEFORE TARIFF BOARD

The following is the body of the memorandum submitted by the National Federation of Iron and Steel Manufacturers of the United Kingdom to the Indian Tariff Board.

1. The period of protection which the Indian iron and steel industry has enjoyed which is now coming under the review of the Tariff Board has been remarkable for the fact that, in spite of a general world depression, the results anticipated both by the Tariff Board and the Indian iron and steel industry in 1926 have been so fully realised. This progress has naturally been followed by the industry in the United Kingdom with the greatest interest, India being one of the most important markets for United Kingdom iron and steel products. Although the progress tends to reduce the consumption of iron and steel products of the United Kingdom in the Indian market, the industry believes that the consuming power of the Indian market can be greatly increased, and that this progress has itself rendered possible much closer co-operation between the iron and steel industries of India and the United Kingdom, in the interests of the Indian consumer, than was the case when the last review took place in 1926.

2. The National Federation of Iron and Steel Manufacturers, on behalf of the iron and steel manufacturers of the United Kingdom request the consideration by the Indian Tariff Board of items in Schedule 11 of the Indian Customs Tariff with a view to their amendment.

The following appendices are attached :

1. Representation of the Railway Tyre, Axle and Wheel Makers' Associations.
2. Representation of the Railway Carriage Wagon Buildiers' and Financiers' Parliamentary Association.
3. Representation in regard to Wrought Iron and steel tubular poles.
4. Lists of the items in Schedule 11 which this memorandum is designed to include. These lists include :—

(*a*) List of alteration desired in the classification.

(*b*) Items in Schedule 11 for which free entry is requested.

(*c*) Items at present classifed with certain other items for which separate classification and free entry are requested.

Separate representations will be made to the Board on behalf of the Sheet and Tinplate Industries.

3. The Federation desire to place on record their appreciation of the courtesy of the Tariff Board and also of the Tata Iron and Steel Co., Ld., in forwarding for the consideration of the Federation the representation submitted to the Indian Tariff Board by the Tata Iron and Steel Co., Ld. The Federation propose to comment in the first place on the submissions of the Tata Company, and secondly to put forward their own proposals for the consideration of the Board. In all cases where a paragraph or page

S. L. 3

is quoted, the reference is to a paragraph or page in the Tata Company's representation.

4. In the introduction, para 1, page 1, reference is made to the adoption by the United Kingdom of a policy of substantial protection for its iron and steel industry; this was the result of the very unfair and uneconomic competition at prices below the cost of production which the producers in the United Kingdom experienced in their home market from Continental makers, and to which the Indian producers are still subject in the Indian market. Moreover, it should be noted that the United Kingdom import duties do not apply to Indian iron and steel products which are subject to neither protective nor even revenue duties. It is also claimed that a further measure of protection is necessary to enable the Tata Company to live in competition with older established industries. The relatively high wages in United Kingdom which are approximately 100 per cent above the Continental wage levels, preclude the possibility of competition in India from United Kingdom makers.

5. It is stated at the end of Para 3 page 2, that "the fall of many of these prices to unprecedentedly low levels is an important factor in the failure of the current scheme of protection to the steel industry to achieve its aims". In the opinion of the Federation, the fall in world demand has been the major influence in the fall in prices. Indian producers have no doubt been faced with the "dumped" prices of Continental steel as have producers in the United Kingdom, and the scheme of protection may well have failed in its intentions in regard to Continental steel. It cannot be said, however, that the scheme of protection has failed in its application to imports of iron and steel from the United Kingdom, as it can be shown that United Kingdom prices throughout the whole period have been higher than those estimated by the Board, with the consequent effect that Indian producers have received protection against makers in the United Kingdom in excess of that which was intended.

6. It is further stated in para 5, page 2, that it is due to the failure of the protection granted that no new works have been established during the last nine years. The Federation submit that this is not an argument for increased protection, but is due to the natural effect of world depression. It is the opinion of the Federation that the reason no new steel works have been established in India during the last nine years is because there has been no economic justification for any such undertaking, and not because of the failure of the scheme of protection.

7. In para 11, page 5, attention is drawn to Statement No. 4 as being evidence of the large extent to which the Tata Company has met the demand in those classes of steel which it can produce. Examination of the statement shows that the Tata Company's percentage has, in the main, increased as the consumption has fallen. The average consumption of those classes of steel produced by the Tata Company over the ten years in question was 936,150 tons and the average annual percentage supplied by the Tata Company over this period was 39.28 per cent. If, however, the Tata Company are able to maintain during the next seven years an average annual output of 530,000 tons and taking the average consumption over the past ten years in those classes of steel which can be produced by the Tata Company as a reliable indication of future demands, it is evident that the Tata Company would then supply a maximum of 56.6 per cent. of this market.

8. In regard to the prices for structural sections, bars and plates shown in Statements 5 and 7 the Federation submit that these figures do not represent the prices which have ruled for some time. The Federation have been advised by the United Kingdom makers that prices of structural sections

and plates have been controlled for a number of years. These controlled prices have remained unaltered for the past seven years at £8-7-6 per ton basis for structural sections and £8-15 per ton ⅜ in. basis for plates, both c.i.f. Indian ports. It should be noted that the ⅜ in. basis price of £8-15 c.i.f. Indian ports is for plates ⅜ in. thick, and that extras apply to thinner plates. The extra on plates 3/16 in. thick is 15 shillings per ton and the price of 3/16 in. thick plates is therefore £9-10 per ton c.i.f. Indian port, and not £8-7-6 per ton as stated by the Tata Company. The Federation have ascertained that the present United Kingdom price of untested bars is £7-12-6 per ton c.i.f. Indian ports. This, however, is the lowest price quoted, and when the price of tested bars is taken into consideration, the average United Kingdom price of bars c.i.f. Indian ports is considerably higher than £7-12-6 per ton. It therefore follows that in the submissions where the Tata Company use United Kingdom prices, the conclusion drawn by the Tata Company should be amended to take account of the difference between the prices which the Tata Company quote and the actual United Kingdom prices.

9. The Federation invite the attention of the Board to the additional protection which the Tata Company have received in the past against United Kingdom iron and steel products by reason of the extras on United Kingdom iron and steel material. The Tata Company in their representation to the present Board have not taken into account any extras chargeable on United Kingdom material.

10. Statement 14 shows the changes in the proportion of tested to untested steel as sold by the Tata Company over the past six years. No doubt the falling-off in orders for rails has been an important contributory factor, but it may also be that the spending power of the consumer in India has been lowered by world economic conditions resulting in the greater use of cheaper grade steels. The fall in the percentage of tested steel sold is quite marked, but it will be noted that it is within the last two years that the biggest change has taken place, admittedly the worst two years in industrial history. If the average over the past six years is taken it will be seen that the position is not very far removed from the estimations of the Board in 1926, except in regard to structural sections. The figures are as follows:

Average Percentage of Orders Booked Tested and Untested Materials

Product	Tariff Board Estimates 1926		Average 1927-28 to 1932-33	
	Tested per cent	Untested per cent	Tested per cent	Untested per cent
Structural sections ...	57.1	42.9	39.15	60.85
Bars ...	28.6	71.4	25.85	74.15
Plates ...	71.4	28.6	66.03	33.97

11. The Tata Company estimate that their average annual output of steel for sale during 1934-41 will be 530,000 tons. It follows therefore that in a normal year when India could be expected to consume from 1,500,000 to 2,000,000 tons of iron and steel products per annum the Tata Company's maximum proportion of the total market for iron and steel would be of the order of one-third. It would appear that the duties should be adjusted to the condition that in a normal year two-thirds of India's consumption of iron and steel would be subject to duties, and take into consideration the fact that any undue increase in prices to the consumer must limit his powers of consumption.

12. The Tata Company has stated that the progress and efficiency of their plant have exceeded the estimations of the Tariff Board at their Enquiry in

1926, and the Federation therefore submit that the Tata Company do not now require protection against imports of iron and steel from the United Kingdom. On the other hand, they have referred to estimated losses due to various factors. The Federation submit that many of these factors were common to iron and steel producers all over the world, and that the losses of the Tata Company have been over-estimated. It is interesting to consider what the Tata Company's position would have been had the world economic conditions which have prevailed not so affected their returns. The latest balance sheet of the Tata Company shows a profit which is satisfactory during a period when most other British steel companies showed a low. The production of the Tata Company has also increased in a period when reduced outputs were general.

13. The Federation do not propose at the moment to comment on the other submissions of the Tata Company, as these will no doubt have been fully investigated by the Board. The Federation, however, are anxious to assist the Board to the fullest possible extent, and are arranging for their representative to be present during the oral evidence.

14. On the Tata Company's submissions it is clear that they do not require protection against imports of iron and steel from the United Kingdom. The Federation therefore request the Board to consider favourably:

1. The granting of free entry to iron and steel products of United Kingdom manufacture.

2. The extension of the policy adopted by the Board in 1926 in regard to the difference in prices between tested and untested iron and steel by increasing the existing duties on iron and steel items of other than United Kingdom manufacture.

15. United Kingdom makers consider that greater facilities for the export of their iron and steel to India should be extended to them by removing the duties on iron and steel items of other than United Kingdom manufacture. In the first place, while India enjoys at present free entry into the United Kingdom it is necessary to the development of a policy of co-operation between Indian and United Kingdom producers that such free entry should be reciprocated; and secondly, because of the very unfair competition of a dumping character which the United Kingdom manufacturers now experience in the Indian market from Continental, and may in the future experience from Japanese suppliers.

16. One of the conditions laid down in paragraph 97 of the Report of the Indian Fiscal Commission was that if any industry desired to apply for protection it would require to prove that it would eventually be able to face foreign competition without protection. The Indian iron and steel industry satisfied this condition, and the Tariff Board at their enquiry in 1926 no doubt had this point in view when they stated:

> "We believe that by 1933-34 the Indian industry should be able to meet British competition without the assistance of any protective or revenue duty, but that if Continental prices remain at their present level some measure of protection may still be required."

17. It appears to the Federation that the Board at their Enquiry in 1926 estimated with remarkable accuracy the position which has undoubtedly arisen to-day, and the Federation submit that having regard to the progress made by the Indian iron and steel industry since 1926 the industry does not now require protection against imports of United Kingdom iron and steel.

18. Experience has shown that any industry can only operate efficiently and economically within a

CALCUTTA — TEL. 6966

radius of the centre of its operations, limited by the cost of transport which, all other things being equal, defines the limit of its competitive power in relation to other producing centres more favourably situated for such markets. The Federation, therefore, submit that it is necessary in the interests of the consumer and to the increase of consuming pwer in India, that there should be co-operation between the Indian and United Kingdom producers, possibly governed by geographical considerations.

19. The Federation are of the opinion that the Indian iron and steel industry is sufficiently protected against imports of United Kingdom iron and steel by the cost of freight and landing charges. If in any particular items further consideration in the interests of the Indian producrs is necessary, suitable provision could be made in this respect under such a scheme of co-operation.

20. The Federation submit that the granting of free entry to iron and steel products of United Kingdom manufacture would ultimately, by reason of lower cost to the consumer, result in an increased demand which would benefit both Indian and United Kingdom producers. It is only by the consumer being able to purchase at such economic prices that consumption and, therefore, production can expand.

Increasing the existing duties on other than United Kingdom material

21. The Indian exporter not only enjoys free entry of his iron and steel products into the United Kingdom, but also benefits under a margin of 33 1/3 per cent. *ad valorem* preference over non-Empire suppliers. It may be pointed out that all iron and steel items of United Kingdom manufacture enjoy differential treatment on entering all parts of the Empire with the exception of India, where differential duties at present apply to certain items only. The Federation submit that the reasons which persuaded the Board at its Enquiry in 1926 to recommend differential duties apply in greater force to the conditions which exist to-day, and that, apart from the implications of the Ottawa Agreements, there is ample justification for an extention of the policy of the Board in this direction. Due to the uneconomic price warfare on the part of the Continental suppliers, the difference between the prices of tested and untested qualities of steel have greatly increased since the Tariff Board Enquiry in 1926. The Board then held that the only way of protecting the interests of the consumer which was administratively possible was to apply lower duties on United Kingdom than on other than United Kingdom material. The Federation, therefore, submit that unless the duties are increased on iron and steel items of other than United Kingdom manutacture there may be, as was contemplated by the Board in 1926, a danger that the standard of the steel consumed will be lowered by the very low actual and potential prices of Continental and Japanese makers. It is universally admitted that United Kingdom iron and steel is superior to the Continental or Japanese iron and steel.

22. Prices of United Kingdom iron and steel products are practically unchanged from those prevailing in 1926 while those of Continental suppliers, due to their uneconomic competition, show a very serious decline with a very adverse effect on exports from the United Kingdom.

23. Exports to India from Belgium, for instance, have shown a steady increase, and in common with other Continental countries Belgium is making a determined effort to oust United Kingdom makers from the Indian market. This competition is both unfair and uneconomic as in the bulk of cases the Continental makers are supplying the material at prices which bear no relation whatever to the actual cost of production in the country of origin. In this

MUST HAVE FERTILIZERS IF THEIR CULTIVATION IS TO BE MAINTAINED AND IMPROVED

"NICIFOS" 22/18

Is decidedly the best Fertilizer for Sugarcane Manuring in North Bihar and is used and recommended for this purpose by the Agricultural Department and Estates.

EQUALLY SUITABLE FOR FIRST APPLICATIONS IN THE UNITED PROVINCES, THE PUNJAB, BOMBAY AND WHEREVER SUGARCANE IS GROWN.

TWO GRADES :

NICIFOS 17/41 (18·8% Nitrogen and 41·4% P_2O_5) Rs. 237/8 per ton f.o.r. Calcutta.

NICIFOS 22/18 (18 % Nitrogen and 18 % P_2O_5) Rs. 167/8 per ton f.o r. Calcutta.

connection it is desired to draw the attention of the Board to the first report of the National Committee for the Iron and Steel Industry to the Import Duties Advisory Committee which is published in Cmd. 4181, dated October, 1932, which states:

"For example it was admitted in the annual report of the Comite des Forges de France at a meeting held in May, 1932, that at the bginning of the year steel was being exported at 30 to 40 per cent. below the cost of production. Prices have fallen considerably since that date. In the journal of the German iron and steel industry, *Stahl and Eisen* for June 30, 1932, Dr. Reichert, the head of the German Iron and Steel Federation states the confusion in prices has never caused such large losses as it did from the summer of 1930 to the spring of 1932. Price losses of £2 to £2-10 per ton were the rule. . . . . A mania prevailed for maintaining the exports, especially with the object of being able to claim as high quotas as possible in connection with future international syndicate negotiations:

"The following table shows the prices of typical products on a gold basis f.o.b. Antwerp at the end of August, 1929, 1931 and 1932:—

	August 1929 £. s. d.	August 1931 £. s. d.	August 1932 £. s. d.
Sheet bars ...	4 17 6	2 19 0	1 19 0
Joists ...	5 3 0	3 2 0	2 2 0
Merchant bars	5 13 6	3 4 0	2 7 6
Heavy plates	6 6 0	3 17 0	2 15 0

"In order to offset the effects first of sterling depreciation, and secondly of protective duties, Continental producers are now quoting prices even below the levels at which they were admittedly incurring losses previously. It will be seen that current prices are about 60 per cent. less than there years ago.

24. The continuance of such competition must clearly operate to the detriment of the Indian consumers by lowering the competitive power of both Indian and United Kingdom producers in the Indian market. If and when such competitive power is weakened or ultimately destroyed, prices will rise to any level dictated by Continental producers acting together under the International Steel Cartel.

25. The following are prices of Continental steel on gold and sterling basis f.o.b. Antwerp at the end of June, 1933:—

	Gold	Sterling
Sheet bars ...	2 8 0 per ton	3 4 1 per ton.
Joists ...	2 15 0 ,,	3 13 5 ,,
Merchant bars	3 0 0 ,,	4 0 1 ,,
Heavy plates	4 1 0 ,,	5 8 1 ,,

26. The Safeguarding of Industries Act, 1933, by giving the Governor-General-in-Council power to safeguard the interests of the industry affected," affords protection to the Indian industry, but from the nature of the case this can only operate after such competition has been experienced. While this is useful as an emergency measure to meet deliberate attack on Indian industry it does not dispense with the necessity for higher duties on Continental material.

27. The United Kingdom industry feels that it cannot be too strongly emphasised that the dumping of manufactured products in a market is a dangerous form of economic war. The result must be the weakening, if not the ultimate destruction, of domestic industries in the country suffering therefrom. It is essential that the existing measures for dealing with dumping should be applied when necessity arises.

28. On the other hand, the United Kingdom industry fully recognises that a national policy must be so designed as to protect the consumer against exploitation, and submit that neither the Indian nor the United Kingdom industry, even if it so desired, is in a position to exploit the Indian consumer under any form of tariffs either domestic or differential as applied to United Kingdom products, since the result of so doing would be to defeat the object which both industries have in view, namely, to secure a larger

consuming power in the Indian market and a greater volume of production for their respective industries.

30. The United Kingdom industry is prepared, in this connection, to co-operate with the Indian producers to the fullest possible extent to ensure that the lowest economic price for iron and steel products is quoted to the Indian consumer. One method is by the allocation, on a geographical basis, of markets most readily accessible to the Indian and United Kingdom producers respectively, another the adoption of a policy of complementary production both of which are designed to give the Indian consumer the best service at the lowest price.

30. The Federation submit that the evidence adduced demonstrates that the Indian iron and steel industry does not require, under present conditions, any protection against the United Kingdom producer. Experience, however, in the United Kingdom home market has proved conclusively that the economic warfare waged by Continental countries as a result of competition between themselves can only be met by an adequate margin of protection. On the basis of free entry of all iron and steel items of United Kingdom manufacture, the Federation submit that the duties on material of other than United Kingdom manufacture should be increased to the extent necessary to make the protection effective.

Complementary Agreements

31. The Federation submit that the interests of the Indian and United Kingdom producers and also those of the Indian consumer, would be best served by the Indian and United Kingdom producers arriving at an agreement whereby the iron and steel market in India would be retained to the fullest possible extent between them.

32. There is a point of common interest between the Tariff Board, Indian industry and United Kingdom producers, that of the interests of the Indian consumer. It is essential to the welfare and economic expansion of any community that it should be able to purchase its supplies of iron and steel at prices which are economic to both supplier and consumer.

33. It will be apparent to the Board that although the Indian industry may be able, under existing abnormally depressed conditions, to meet, to a considerable extent, the requirements of the iron and steel market in India, this would not be the position if consumption was normal.

34. In conclusion the Federation desire to assure the Board that, while their objective is naturally to improve the position for the United Kingdom industry in the Indian market, they fully recognise that the position of the Indian industry, having due regard to the interests of the consumer, must be reasonably safeguarded. They are of the opinion that the consuming power of India in iron and steel could be materially developed by an active policy of co-operation between United Kingdom and Indian producers. Also that such development of the Indian market—since iron and steel products are for the most part capital goods—would have the effect of assisting materially the economic progress of India in other directions. The United Kingdom industry is prepared to take the requisite steps to ensure the maintenance of an effective organisation, provided it is assured of co-operation on the part of the Indian producers and the benevolent interest of the Government of India in its development. Recognising that, as the consuming power of India develops, it is likely that the productive power of the Indian iron and steel industries will legitimately increase the basis of the co-operative policy which they envisage is to secure at any moment to the Indian consumer the most efficient service at the minimum economic price.

(For and on behalf of the National Federation of Iron and Steel Manufacturers).

THE SCIENCE AND PRACTICE OF AIR CONDITIONING

By WM. W. KING, AMIH & VE

The subject of air conditioning is one which has received a considerable amount of local attention during recent years. This is not surprising as it can play an important part in promoting the welfare of any country. It certainly may be questioned whether air conditioning apparatus can be applied to any other country with more advantage than to India.

And what is air conditioning? It is a specialist field of engineering which has for its object the provision and maintenance of any desired atmospheric conditions within buildings or similar enclosures entirely irrespective of the outside weather. That is to say, the keeping of an interior at any desired climate regardless of how hot, cold, dry or humid the outside weather may be.

Obviously for apparatus to be capable of 'manufacturing' a climate it must be capable of effecting definite control over the following factors, namely :—

(1) Temperature
(2) Humidity
(3) Purity
(4) Movement

In order, therefore, to be able fully to comprehend the subject of air conditioning it is necessary to have some general knowledge of the composition of the atmosphere and its physical properties. It is not the writer's intention to recapitulate all that is known of the laws of gases and other relevant natural phenomena, but merely to define certain terms which will be used subsequently in this article.

Firstly, there is the dry bulb temperature. This is the temperature indicated by the ordinary thermometer, which contrary to popular belief is no criterion either of personal comfort or of the heat content of air. It merely gives an indication of the rate at which heat can pass to bodies on a lower temperature plane.

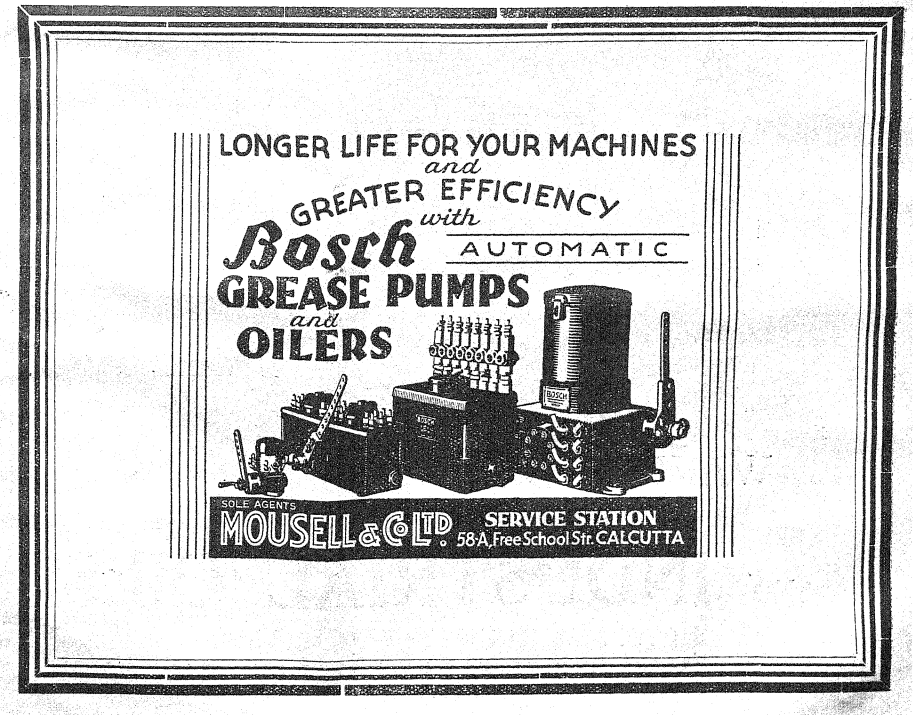
The wet bulb temperature is of supreme importance in air conditioning work and a correct understanding of what this term means is essential.

It has been proved mathematically and demonstrated experimentally that the 'total heat' of air is constant at any given wet bulb temperature, and this permits the definition of the wet bulb to be enunciated as that temperature at which air would become saturated if moisture were added to it adiabatically, i.e. without the addition or subtraction of heat.

Wet bulb readings to be accurate must be taken with the moistened bulb vigorously ventilated, and a common method is by means of a sling psychrometer which merely consists of two ordinary thermometers of which the bulb of one is kept moist. The thermometers are whirled in the air by a suitable handle and a reading taken immediately they come to rest.

The dew point is the temperature to which air must be lowered in order that its moisture may commence to condense out.

Relative humidity is an expression as a percentage of the degree of saturation of the air with



moisture. Thus air at 45 per cent. relative humidity indicates that the air contains 45 per cent. of the moisture it could contain if saturated at the specified temperature.

Absolute humidity is the actual weight of moisture (generally expressed as so many grains per cubic foot) in the air.

That completes the only reference that need be made to the terms customarily used in the physics of this subject, and we will now proceed to describe what is known as a 'conditioning machine' such as is used for the generation of an artificial climate in a building.

The fundamentals of such a machine are of so simple a nature that some difficulty may be experienced in believing that with the equipment described it is possible to maintain literally any desired climate in a building, however severe or unpleasant the outside atmosphere may be.

A conditioning machine simply consists of a centrifugal fan driven by some convenient source of power which is so arranged as to draw outside atmospheric air through a chamber in which a very fine spray of atomized water is generated by a power driven pump.

Providing no source of heat or cold be applied to the water, the air after passing through the spray will emerge in a condition of 100 per cent. relative humidity at the temperature of the outside wet bulb, which in the drier parts of India is generally 30 to 40 degrees F. lower than the dry bulb temperature.

To take a common condition in a district having a climate such as that experienced in Delhi during the hot weather. The dry bulb temperature will be 110 degrees and the wet bulb (as read by the sling psychrometer) will be 70 degrees F. Thus air will leave the fan saturated (but only in the sense of vapour, not liquid water, being held in the air) and by permitting a predetermined quantity to enter a building the latter may be cooled to any desired temperature provided it be higher than 70 degrees F.

It will be at once appreciated that the absorption of the internal heat of the building will not only raise the temperature to the desired figure but that the relative humidity of the air simultaneously will be lowered from its initial saturated state to any desired percentage subject to certain obvious limits.

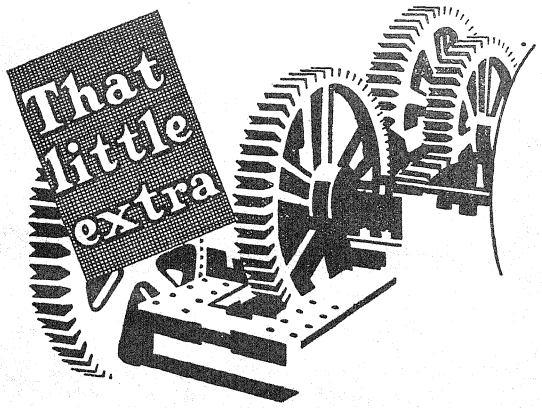
The above represents the application of the principle of "Evaporative Cooling" and is of tremendous service in hot and dry districts.

While such evaporative cooling apparatus has a very wide application and by reason of its comparatively low cost fulfils most needs, its usefulness is limited by the dryness (*i.e.*, low relative humidity) of the climate of the district in which it is installed. In humid climates such as prevail in Bombay, Calcutta, Ceylon, etc., such equipment would be of little value and the conditioning machine is modified in a basic manner to meet the altered conditions.

This alteration consists of employing means to permit the machine to deliver air at a lower dewpoint temperature than that of outside wet bulb.

To this end the spray water is artificially cooled by means of a refrigerator. The degree of cooling can be whatever is desired, provided of course that the water be not brought below 32 degrees F. In actual practice it is seldom necessary for the spray water temperature to be lower than 60 or even 65 degrees F.

The incoming air passing through such artificially cooled water will become saturated a few degrees above the water temperature and will precipitate or condense out the surplus moisture in the cold spray in the ratio of the entering and leaving dewpoint temperatures. It naturally must appear paradoxical that it should be possible to dry air by passing it through a water spray, but a little consi-



Just "that little extra" which makes all the difference between an oil that is merely good, and one that is *better*. Wakefield INDUSTRIAL Oils are in use all over the world which proves their merit. Specify "Wakefield" for the lubrication of your Sugar Mill and economise.

TELEPHONE 3367 CALCUTTA

deration will convince one that no physical laws are infringed.

When the conditioning machine is used in the manner described above, the process is known as cooling and dehumidification, because the absolute humidity of the resulting atmospheric conditions is lower than that of the outside climate.

To describe the methods of distributing the cooled air throughout the building equipped with air conditioning apparatus and the various means employed for automatically varying the volume, temperature and hygrometric state of the air would occupy too much space in an article of this nature. Suffice it to say, however, that research extending back for a period of twenty years has evolved methods which permit the air conditioning engineer to design equipment which can for indefinitely long periods maintain any desired atmospheric conditions with complete conditions with complete accuracy.

The development of this science has in no small degree contributed to the rapid industrial development so obvious in America and Europe to-day. Hardly an industry but manufactures its product in that climate best suited to bringing out its peculiar physical characteristics.

The tobacco and artificial silk, cotton, confectionery, paper and film industries are but a few, and even here in India it is not generally known that some 50 cotton mills, with the help of this type of apparatus operate at temperatures frequently 25 degrees F. below that of the outside shade. The fermentation of tea in Assam is carried out under artificially generated atmospheric conditions, and in most provincial governments the legislators deliberate in conditioned air. Three or four office buildings of large dimensions have been conditioned, and there is little doubt that employers will rapidly appreciate that cool and comfortable conditions for their staff will increase the quality of work.

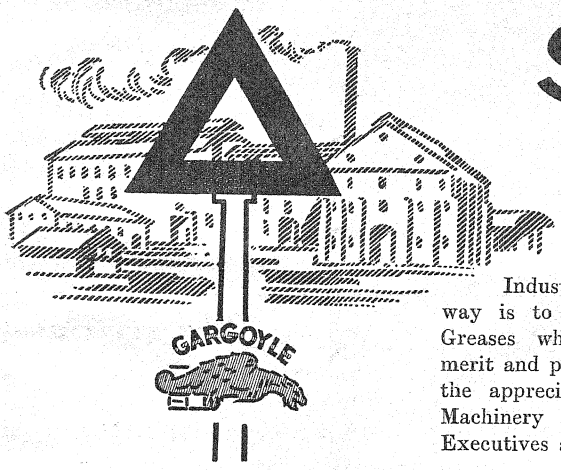
Many industries hitherto held to be incapable of operation in India owing to the lack of suitable atmospheric conditions can be with the help of Air Conditioning machinery be carried on as well here as elsewhere, and it would not be unreasonable to state that the industrial expansion of this vast country will depend to a great extent upon the specialist in this field.

During the current year a new factory has been started in Calcutta to manufacture cigarettes with high speed machinery of the most modern type.

Accurate control of the internal atmospheric conditions was absolutely essential in order to ensure uninterrupted production and such has been the success of the air conditioning equipment in this particular factory that it is claimed that the output is already equal to that of similar factories in Europe where far more highly skilled labour is employed to operate the various machines.

The foregoing remarks have been confined to air conditioning as applied to large buildings and various industrial processes, but mention must also be made of the recently developed room cooler. This machine is the result of several years research work, and follows the large central station type of plant in the same manner as the domestic refrigerator came into being many years after large commercial cold storage and ice making plants had been proved a success.

The latest type of room cooler is a most compact unit comprising a complete refrigerating plant, air cooler and circulating fans all mounted into a steel cabinet of a most pleasing design. One or more of these cabinets are used; the actual number required varying with the size and type of construction of the room to be cooled. These sets are now being manufactured in large quantities and cost no more than the average motor car. Their popularity in Western countries is already established, and the day is not far distant when residents in India will no more think of omitting to equip their flats and bungalows with room coolers than to forget a domestic refrigerator.



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike.

PROSPECTS OF INDIAN SUGAR INDUSTRY

CONCRETE SUGGESTIONS FOR IMPROVEMENT

Statement of the Representative of the Indian Sugar Mills Association to the Sugar Conference convened by the Government of Bihar and Orissa to meet in January 1934.

1. The Sugar industry is peculiarly of a nature which makes the fullest co-operation between agriculture and manufacture essentially necessary for its success.

2. Behar is now faced with the problem that although the factories in Behar and United Provinces are able to supply the whole requirement of India, factories are still going up not only in Behar and United Provinces but other Provinces as well.

3. Behar will naturally like to maintain the sugar industry, which has become very important not only from the industrial but also from the agricultural standpoint. The sugar industry is the pride of Behar. It has also enabled the agriculturists to earn a very good income, much larger than could have been earned by them by the cultivation of other crops.

4. Behar should not therefore, take any premature or false step as a result of which her industry may be placed in a disadvantageous position as compared with other Provinces, thus leading towards a stoppage of mills or a retardation of their development. The mills in Behar have to sell their product in distant provinces after overcoming the obstacle of high Railway freights.

5. It is necessary to bear in mind that :—

(*a*) there are three parties to be considered, *e.g.*, Cane Grower, Sugar Manufacturer and Consumer.

(b) the sugar factories in Behar have to face competition among themselves as also competition with those in the other Provinces of India and with foreign manufacturers.

6. The position at present in Behar is that each acre yields aout 13 tons of Sugarcane from which 8½% of Sugar, i.e., about one ton of Sugar can be extracted.

In Java, each acre yields about 50 tons of Sugarcane from which about 12% sugar, i.e., about 6 tons of Sugar can be extracted.

Even in Bombay, and the United Provinces one acre yields about 35 and 40 to 45 tons of Sugarcane respectively from which about 12% of Sugar, i.e., about 4 and 4½ tons of sugar respectively can be extracted.

7. It is thus clear that if Behar is to compete, attention should be concentrated on the improvement of cane cultivation, both as regards quantity and quality. The Government, the manufacturer, the agriculturist, and the public should all co-operate with each other in that direction.

7A. It is also necessary to secure early and late maturing canes, in order to increase the period of manufacture of Sugar.

8. The Government should frame proper schemes to suit each locality, in order that by carrying them out the cultivation of cane both as regards quality and quantity may be improved so as to reach the standard of Java. Otherwise the industry in Behar can never stand on its own legs and would gradually be wiped out by competition from other provinces, and from outside India, if there be any change in the means of protection at present *de facto* enjoyed by the industry. In such an event, the agriculturists will be the greatest losers and the capitalists who were attracted by the Province to invest large sums of money will lose all their capital.

8A. It has been found from actual experience that the factories in Behar are placed at a disadvantageous position as compared to those in other provinces in the matter of Railway Freight, etc., and this difference will remain as a constant handicap to factories in Behar.

9. As competition has necessarily to be faced, the price of sugar must come down. Indeed even in the last season (1932-33) the average price of sugar came down to Rs. 8-8-0 per maund from about Rs. 10 per maund obtained in the previous season. It is thought that the average price will fall to about Rs. 7-8-0 per maund during the next season. Thereafter as Mills expand and multiply, there must be further falls in the price of sugar.

9A. The ultimate objective must be to so arrange matters that the Mills in India may not only supply the country's requirements but be able to export sugar to outside markets, at least to British and Colonial Markets under a system of preference.

10. This object can only be achieved by cheapening the price of sugarcane and improving its

INSURANCE OF SUGAR FACTORIES

THE LONDON & LANCASHIRE INSURANCE CO. LTD.

REGARDING FIRE RATES FOR BUILDINGS, MACHINERY AND STOCKS.

Full particulars on application to :—

BRANCH OFFICE: 2, FAIRLIE PLACE, CALCUTTA

LIBERAL PROMPT SECURE

quality so that a larger percentage of sugar may be extracted.

11. When mention is made of cheap cane, it is not intended that the income to the agriculturist per acre should be reduced. But under the stress of competition to which the manufacturers have been and will be put, the present income to the agriculturist can only be maintained if the yield of cane per acre can be increased. To further explain this point, it may be stated that if at present the agriculturist gets As. 5 per maund of cane, he gets (for an yield of 13 tons per acre) about Rs. 110 per acre.

If the yield be increased to about 25 tons per acre, he will get the same income per acre even if the price be reduced to -/2/6 per maund. A higher price than that rate will give the agriculturist a large income.

In case the yield can be increased to 40 tons per acre, and if the price of cane be As. 2 per maund, the agriculturist's income per acre will be about Rs. 135.

If the percentage yield of sugar be increased, the manufacturer will easily be able to pay a higher price per manud of cane.

12. We think we have been able to demonstrate that in the interests of all concerned, it is necessary that attention should be concentrated on the improvement of agriculture.

13. The agitation that is being carried on against the manufacturers, and ostensibly for the benefit of the agriculturists, necessarily diverts the attention of the manufacturer from progressive development to a defensive position, instead of being able to devote proper care and attention to meeting the difficulties and complications involved in carrying on manufacture and business; much useful time has to be devoted entirely to clearing the public atmosphere as regards the requirements for the benefits of all parties concerned. In addition to this, the agriculturists are mislead from their reasonable and normal course and will often be a prey to outside tactics.

14. We hope that the Conference called by the Government of Behar will take the whole matter into consideration and declare that the essential need is the improvement of agriculture and the setting of industry in a stable position so that it may successfully meet all competition.

15. Referring to the particular question of fixing a minimum price of cane, we beg to submit that:—

(a) it bristles with difficulties and

(b) it will not work to the benefit of the agriculturists themselves.

16. The difficulties were lucidly pointed out by Mr. H. C. Prior, I.C.S., (Secretary to the Behar Government) at the Conference held at Simla a few months ago.

(a) For what quality of cane is the price to be paid?Why should a millowner buy cane giving a smaller yield of sugar at the same rate as cane giving a larger yield? How are the quality disputes to be settled? What will the grower of the inferior cane do with it if he cannot sell it to the factory at a lower rate?

(b) Is the price of cane to be fixed for dry cane or fresh cane? What will the cultivator do with his dry cane?

(c) Is the cost of carriage to the factory gate to be deducted or not? Otherwise why should the factory get cane from distance? What should the grower of that cane do with it?

(d) What is to be done when sellers of cane of their own accord compete with each other and insist on selling their cane at lower rates? This is not imaginary but has actually happened.

(e) What will be the impetus to improve the quality of cane?

(f) Is the law to apply only to factories or contractors also?

(g) Is the law to apply to people who buy cane to make gur or manufacture sugar as Khandsaris? How can it be discovered whether a middleman bought cane to sell it to a factory or a gur maker or a Khandsari?

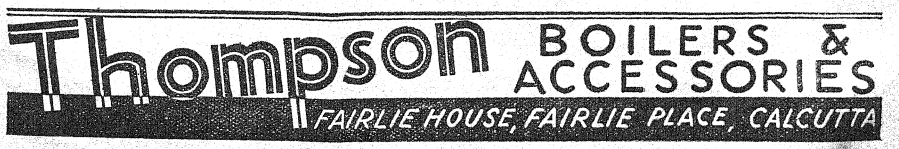
(h) Such a law would hinder the bringing about of a direct contact between the Factory and the Cultivator which is so desirable, and increase the number of middlemen, a situation which will adversely affect the interests of the cultivator.

(i) Will the Government agree to neutralise the disadvantages suffered by some factories, in comparison with others, in the matter of railway freights? In some cases, the difference in railway freight between two factories amounts to six annas per maund of sugar, which is equivalent to a difference of half an anna in the price of sugarcane. Is it not unjust that a mill which is subjected to the handicap of higher railway freight should have to pay compulsorily the same rate for cane as a factory more advantageously situated in this respect?

17. We have mentioned only some of the points but they are sufficient to show how undesirable it will be to have legislation for the fixing of minimum price. The manufacturers in their own interests, if allowed to work honestly and straightforwardly and properly guided by the Government, will exert their influence towards improvement of agriculture and stabilisation of the industry. If, however, restrictions be imposed on them, they will be scared and consider it to be in their interest to make the most in a short time.

18. As a matter of fact, there is no justification for the scare that has been raised. The factories, last season, in fact paid about As. 5-6 per maund of sugarcane to the cultivators, though there may have been cases in which (*a*) the contractors made undue profits and (*b*) the cultivators themselves showed a great anxiety to sell at lower rates. No general obstruction should be laid because of a few exceptions. For the next season, the Factories have arranged to come more in direct contact with agriculturists. The agriculturists, too, have got to be trained to the benefits of direct contact.

19. The Government should also devote proper attention in the interests of all concerned towards the utilisation of molasses and providing roads for the carriage of cane.



THE FERTILISATION OF SUGARCANE SOILS

Manuring has an obvious importance to a preponderatingly agricultural country. While there is hardly a crop in India the production of which will not improve with the application of scientific methods of preparing the soil, the subject of fertilisation has a special importance to the cultivation of sugarcane and the manufacture of sugar. Where any unit of sugar manufacture attempts to hold its own farms, the economies of cultivation will enter directly into the costs of final production. Even should the distinction between the agricultural and the manufacturing interests continue, its importance to the manufacturers with the best types of cane should be forthcoming. It is not often realised that fertilisation is not merely a question of growing larger quantities of the crop in a given year. The yield of juice and the quality thereof are of far greater importance and it has often happened that relatively larger quantity of crop resulting from a particular process of fertilisation has failed to yield any proportionate increase in the juice extracted therefrom. It will, therefore, be seen that it requires expert guidance to arrive at the exact process by which the required results in quantity and quality can be obtained.

The result of experiments extending over a great many years seems to show that a graded mixture of manures contributing nitrogen and phosphoric acid is about the best all round fertilizer for sugarcane. But here the expert comes in again; as even when this ideal fertiliser is used it may be advisable at times to add a small quantity of potash where the particular soil needs it. But even to this there are exceptions.

Naturally enough all manufacturers of chemical manures are alive to the advantages of nitrogen and phosphoric acid and supply excellent brands. The Imperial Chemical Industries have been putting out an extensive propaganda regarding a product they have christened NICIFOS. The propaganda as issued is particularly on the Purtabpore Estate.

For convenience the results of each experiment are shown in tabular form, to which is attached a short note explaining and interpreting the results.

Note on Experiment "A"

Experiment "A" was designed to ascertain the effects of Nitrogen alone; Phosphate alone; a combination of Nitrogen and Phosphate in equal quantities; the effect of the addition of Potash to Nitrogen and Phosphate; and the effect of a heavy dressing of Phosphate in addition to a medium dressing of Nitrogen.

Nitrogegn alone at 60 lbs. per acre in the form of Sulphate of Ammonia has increased the yield by 74 md. per acre; Superphosphate alone at 60 lb. P_2O_5 per acre has increased the yield by 55 md. per acre; but when both Nitrogen and Phosphate are used in combination, the yield per acre is increased by 232 md. showing that, while neither Nitrogen nor Phosphate is capable individually of greatly increasing the crop, in correct combination they are markedly beneficial.

The addition of Potash to the above treatment has had no beneficial effect, but rather the contrary, although it would not be safe to assume from this that Potash has actually depressed the yield.

The addition of extra Phosphate in treatment F over that required to balance the 60 lb. of Nitrogen which has been used uniformly throughout these experiments has given no increase in yield, and it stands out clearly that the best result achieved here is by

Turn Waste Molasses into a valuable Fertilizer

Mr. W. J. Alcock, M. I. Chem. E., A. I. Mech. E., M. Inst. Fuel., has discovered a means whereby the problem of the disposal of Molasses is simplified:

With the Alcock Molasses disposal plant there is an income from waste Molasses and the cost of the plant is moderate and economical to run.

Write for full details which we will be pleased to furnish together with estimates.

THE MALL LAHORE

the fertiliser containing equal quantities of Nitrogen and Phosphate. This is further borne out by reference to the sugar content column in the 'Analysis Record of above Treatments'. Here again, the best showing—marked by an asterisk—is made by the 'D' treatment which has received equal quantities of Nitrogen and Phosphate.

The nett profit has been arrived at by deducting the cost of fertiliser per acre from the value of the increased yield of cane per acre over the untreated control at a valuation of 5½ annas per md. The largest profit is shown by the perfectly balanced fertiliser and a return of 245% on the money invested in this fertiliser should be sufficiently encouraging to induce those who have not yet used Nicifos (22/18) to investigate the very real advantages to be secured by its use on sugarcane in North Bihar.

Particular attention must be drawn to the fact that while iin North Bihar it is customary on many estates to use Superphosphate only, the experimental work of the Agricultural Department and the present experiments indicate very clearly that Phosphates by themselves are not enough for sugarcane and that if really satisfactory yields are to be secured Nitrogen must also be used in equivalent quantities. The most convenient fertiliser on the market providing Nitrogen and Phosphate in equal quantities is NICIFOS 22/18.

Note on Experiment "B"

In this experiment, the object was to ascertain the effect of increasing quantities of Nitrogen on a small uniform dressing of Superphosphate at 30 lb. of P2O5 per acre. To this uniform dressing Nitrogen was added at 25,50,75, and 100 lb. per acre.

We saw in the previous experiment that 60 lb. of P2O5 per acre increased the crop by 55 md. in this experiment, with only 30 lb. of P2O5 but with 25 lb. of Nitrogen, the crop has been increased by 80 md. per acre. The addition of a further 25 lb. of Nitrogen making 50 lb. of Nitrogen in all has increased the crop by 122 md. per acre. Beyond this, further additions of Nitrogen have not increased the crop in any convincing manner, and it is obvious that a limitation has been imposed by the small quantity of P2O5 used as a basal dressing. With larger quantities of P2O5, the 75 lb. and 100 lb. dressings of Nitrogen in the 'D' and 'E' treatments would have been able to exercise their effect more fully, and the conclusion which must be drawn from this experiment is that it is wrong to keep on applying heavy doses of Nitrogen unless these are associated with equal quantities of Phosphate. A further limitation on crop increase was most probably

MUTTRA ELECTRIC SUPPLY CO., LTD.

NOTICE

is hereby given that the Fourteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Friday, the 5th January, 1934, at 11-5 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 29th December, 1933, to the 5th January, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated Calcutta, the 22nd December, 1933.
